QUINTUS CURTIUS RUFUS, a Roman historian, of whose life nothing is known, but who is supof whose hie holming is known, but who is sup-posed to have been the writer spoken of by Suctonius. He wrote the "Acts of Alexander the Great, King of the Macedonians," in ten books, two of which are lost. The clear style of the work has caused it to become a classic. although it is more a romance than a history, and is full of errors in geography and chronology. There are many editions of it, and an English translation was made by Digby in 1726. Supposed to have flourished at the beginning of the 1st century.

RABELAIS, François, ra'-be-lais, a celebrated French writer, was the son of an apothecary, and became a monk of the order of St. and became a monk of the order of Dis-Francis. He afterwards entered a convent of Benedictines, but finding that a monas-tic life was distasteful to him, he determined to abandon the monastic life. He then studied medicine at Montpellier, where he took his doctor's degree, and became professor in 1531. The chancellor Duprat having abolished the privileges of that university, Rabelais was deputed to wait on him, and succeeded in ob-taining a reversal of that decree. The carditaming a reversal of that decree. The curdi-mal du Bellay, ambassador to Rome, appointed him his physician, and took him in his suite. On his return to France he was rewarded with a prebend in an abbey, and the benefice of Mou-don, which offices he filled until his death. His principal work is the famous satirical romance with the description of the property of the con-tribution of the superior and Parties. principal work is the namous saurical romanies cuttiled the "History of Gargantua and Panta-gruel." In this work, wherein acutenes, wit, and humour overflow, even to infotuness, Rabelais, under the guise of allegory, ridiculed all the great personages of his country. RACHEL, Eliza Rachel Felix, usually called,

ra'-shel, a celebrated French actress, who was the daughter of a Jew pedlar. The family gained a livelihood by periodically visiting gained a livelihood by periodiciny visiting various towns in Germany and Switzerland, at length settled for a time at Lyons, and in 1830 went to reside at Paris. Sarah, her elder sister, used to sing at the various cafes, to the accompaniment of an old guitar, while Rachel went from table to table to collect the offerings of the spectators. On one of these occasions the young minstrels attracted the notice of M. Choron, the founder of the Institution for the Study of Secred Music, and he, more particularly noticing Rachel, took both sisters under his charge. After a short time, however, he found that the sonorous organ of the young Jewess was better suited for declamatory expression than for music, and he transferred her, as a pupil, to a dramatic instructor. Under this tutor she laboured unweariedly during four reary until she obtained a true conception of the highest classical characters, although she had a secret longing for the lighter creations of Molière. She next became a student at the Conservatoire, and, in 1837, made her début at the Gymnase, but with little success. In the following year, however, she took the Parisian public by surprise, and excited the greatest en-thusiasm by her performance of Camille, in "Les Horaces," at the Theatre Français. The Parisian critics were startled by her powerful acting, by the originality of her conceptions, and, above all, by a certain concentrated power of expression which thrilled to the soul of the or expression when intrined to the Soul of the hearer. In the same year she performed other classical parts, such as Emile, in "Cinna," Monime, in "Mithridate;" and the chief character in "Thèdre." Her popularity reached the highest point at once, and her salary, which was 4000 francs in the first year, became 20,000 in the second. In after-years her income varied from 300,000 to 400,000 francs. In course of time she extended her repertoire by the re-presentation of parts in modern works, and presentation of parts in modern works, and -attracted crowded audiences by her perform-ance in Advienne Lecouvreur, Lady Tartinit, and Louise de Lignerolles. Up to her very last season she continued to study regu-larly, and a strong proof of her progress was to be found in the suggestive changes and very decided improvements which took place in her enactment of the part of Phèdre, always a fine performance, but in later years a truly grand one. In Landon she was always welcouncil at her periodical visits to the St. James's Theatre; but, although great things had been expected from a trip across the Atlantic, her chorts at New York were far from being a real streeess. Never of a robust constitution, the ardaous labours of her profession at length led to an illness which cut her off prematurely. u. at Munf, Switzerland, 1820; D. at Cannes, 1858.

In the retreat to the lines of Torres Vedras, and in the subsequent operations, he evinced distinguished merit. At Waterloo he lost his right tinguished merit. At Waterloo he lost his right arm, and was subsequently created K.C.B. and a colonel. After the conclusion of the war he infillied the diplomatic duties of secretary and minister in the embassy at Paris. In 1810 he became military secretary to the duke of Wellington, both in the Ordnane and at a later period at the Horse Guards. Upon the death of the Duke of Wellington, Lord Raglan was colled to still bicher military duties. He was called to still higher military duties. He was appointed master-general of the ordnance, and, at the outbreak of the war between England and Russia, was selected to take the command of the British army destined to defend the Turkish empire. Under his directions, and in conjunction with the French troops led by Marshal St. Arnaud, the British army signally defeated the Russians, and in two hours carried the intrenched and fortified position on the heights of Ahna. It has been ascertained that he was for carrying Schastopol by a coup-de-main, but gare way to the wishes of the French com-mander, who desired to take the fortress by investment. The repulse and defeat of the enemy at Balaklava, and the daring intrepidity of the army at Inkermann, took place under his com-mand; but he succumbed to disease before the final success of the operations which he himself had mangurated. He accompanied that general to Italy in 1796, and fought in almost every subsequent engagement, winning high honour for his great skill, bravery, and readiness of resource, till at length he was selected by Bonaparte to carry to Paris the twenty-two colours captured from the enemy. In the Egyptian campaign he was a general of brigade, and, in 1799, was one of the officers who accompanied Bonaparte in his perilous flight from Egypt. Between the vears 1805 and 1814 he was one of the most conspicuously skilful and courageous of all Napoleon's subordinates. At Ulm, during the conquest of the province of Styria; at Wagram; as the successor to Massena in Portugal; and at Bautzen, Dresden, and Leipsic, he bore a distinguished part. Against an allied force of Austrians, Russians, and Prussians, numerically four times greater than his own, he obstinately defended Paris, in 1814. But when the enemy's artillery began to sweep the city from the heights of Montmarire, he revelved instructions from Joseph Bonaparte which permitted him to evacuate the French capital. He then went over to the allies with his entire force, thus deserting the ca of the emperor for ever. Ho was subsequently employed by Louis XVIII. and Charles X., the latter of whom commanded him to repress the revolt of 1830: he was, however, defeated by the people, and became an object of odium with his countrymen. Being still intent upon making discoveries, he, in 1584, fitted out a squadron, which endeavoured to establish the colony called, in honour of Elizabeth, Virginia; but almost the only fruits of the expedition were the singing of the tobacco-plant and the potato to ingland. After spending £40,000 in an unsuc-essful attempt to found a colony, he abandoned he scheme to a mercantile corporation. Meanwhile he had been made a knight, captain of the queen's guard, a lord warden of the Stanna-ies, and lieutenant-general of Cornwall. In he defeat of the Spanish armada, in 1598, Sir Walter bore a glorious part, for which he re-eived distinguishing marks of favour from the jucen. In 1591 he sailed on an expedition against the Spanish fleet, but without success. About the same time he incurred the queen's lispleasure by an intrigue with one of her maids is pleasure by an intrigue with one of ner mans of honour, whom he afterwards married. In 595 he sailed to Guiana, and destroyed the capital of Trindad. The year following he took a distinguished part in the capture of Cadiz. Honours were lavished in abundance upon him, and he obtained the lordship of St. Germaine, in Cornwall. Sir Walter was one of those who brought about the fall of Essex, and remained in the favour of the queen till her death; but, in the succeeding reign, his fortunes changed. He was stripped of his preferments, tried, and condemned for high treason, on a charge the most frivolous, and without the least evidence. He remained in the Tower thirteen years, during which he wrote several works on various subplets of great importance, the best of which was the "History of the World," which was published in 1614. The year following he was released, in consequence of the flattering account which he had given of some rich mines in Guiana. On gaining his liberty, he sailed to that counon gaining ins overy, in search of these pretended mines, instead of discovering which, he burnt the Spanish town of St. Thomas, and returned to England, where, on the complaint of Gondomar, the Spanish ambassador, he was apprehended, and, in a most unprecedented manner, beheaded on his former sentence. His works are historical, philosophical, poetical and political. As an author, Humo declares him to be the "best model of the control of the con our ancient style;" and Hallam speaks of him as "less pedantic than most of his contemporaries, seldom low, and never affected." The appearance and character of this poet, courtier, navigator, statesman, and military and naval commander, are thus sketched by Aubrey;—
"He was a tall, handsome, and bold man; but his nerve was that he was dammable proud. He had a most remarkable aspect, an exceeding high forehead, and long-faced." RICHARDSON, Samuel, an eminent English novelist, was the son of a joiner, whose circumstances did not permit him to give the future author more than a very ordinary education; after which he was bound apprentice to Mr. Wilde, a printer in London. At the expiration of his time, he became foreman and corrector of the press in his master's establishment. At length he set up in business for himself, first in a court in Fleet Street and afterwards in in a court in Theet Street and atterwards a Salisbury Square. He became one of the fore-most printers in London; and, by the interest of Mr. Oneslow, speaker of the House of Com-mons, obtained the printing of the journals of that House. In 1754 he was chosen master of the Stationers' Company, and in 1760 purchased a molety of the patent of law-printer to the a motory of the patients of law-printer to the king. In 1740 he made his first appearance as author, by publishing "Pamela," the outline of the plot of which he had heard some years be-fore; and, says he, "I thought, if written in an casy and natural manner, suitable to the sim-licity of it, it might possibly turn young people into a course of reading different from the pomp and parade of romance-writing, and, dismissing the improbable and marvellous, with which novels generally abound, might tend to promote novels generally abound, might tend to promote the cause of religion and virtue." This work, which may be considered as the precursor of the regular English novel, at once became highly successful, and encouraged the author to proceed in the sume career. His next performance was "Clarissa Harlowe," which is esteemed his masterpiece, though his novel of "Sis Charles Grandison" nosessess creat beau. "Sir Charles Grandison" possesses great beauics. Besides these works, he published a volume of "Familiar Letters" for the use of young people; an edition of "Esoy's Fables, with reflections; and a paper in the "Rambler." RISTORI, Adelaide, ris'-to-re, an eminent Ita-lian actress, was the daughter of a strolling player, and played, herself, children's parts at the age of four years. At 15 she attracted the notice of the famous tragic actress Charlotte Marchionni, who gave her some invaluable counsel. Upon her marriage with the young Marquis del Grillo, she retired from the stage; but was induced to return to it by the triumphs she obtained when playing, for a single occa-sion, at the benefit of one of her old friends. She was playing at Rome in 1819, and divided her time between the theatre and her duties as an attendant upon the wounded in hospital. In 1855 she appeared at Paris, where she excited the utmost enthusiasm. On repairing to London, shortly afterwards, an equally brilliant reception greeted her; which she also experi-enced in Germany and Russia. The talents of Madame Ristori were rich and varied: tragedy, comedy, and even broader dramatic works, were all within the compass of her genius. Cividale, 1821.

RITSON, Joseph, rit'-son, an English lawyer and eminent antiquary. He became a con-veyancer in Gray's Inn; but having purchased, in 1785, the office of high bailiff of the liberties of the Savoy, he devoted the remainder of his life to literature. ROBERT I., duke of Normandy, was the eldest, son of William the Conqueror. He had recourse to arms against his father, who was compelled to eede the ducky of Normandy to him. He sold nearly a third of his territories to his younger brother Henry, afterwards Henry I. of England, for the sum of £5000. The latter invaded Normandy in 1105, and, after a san-guinary battle beneath the walls of Tenchebrai Castle, Robert, with 400 of his knights, was taken prisoner. He was afterwards confined for the remainder of his life in Cardiff Castle. Some historians assert that his sight was taken away by his mereiless brother Henry, but Wil-liam of Malmesbury declares that his only punishment was that of solitary imprisonment

During the infancy and exile of David II., the successor of Brace, the Steward held the reins of government in conjunction with the earl of Moray. The portrait of this gal-lant founder of a line of Scottish and English

gs was thus given by Fordun; "He was a comely youth, tall and robust, liberal, gay, and courteous; and for the innate sweetness and controlled a first the manage sweetness of his disposition, generally believed by true-hearted Scotchmen." When David II, was taken prisoner by the English at Neville's Cross in 1316, the Steward was for the third time appointed regent, and, during the subsequent 11 years, administered the affairs of the kingdom with remarkable sagacity. In 1359, two years after the release of the king, the Steward was created earl of Stratheam, and, upon the death of David, in 1371, was declared king by the title of Robert II. After the demise of Edward III, of England, hostilities were renewed between the two countries, and, while the English laid waste the north in one direction, the Scotch advanced into England, and appeared before Carlisle. first nine years of his reign he ruled in pence; but, in 1399, Henry IV. of England marched, at the head of a large army, into Scotland as far as Bálnburgh, which city was successfully de-fended by the duke of Rothosay, the king's eldest son. In 1401 Hotspur (Henry Percy) advanced to Preston, in East Lothian, and the king's troubles were augmented by the death, at the age of 24, of his eldest son, the duke of Rothesay, who had been seized, imprisoned, and, it is supposed, murdered, by his uncle, the duke of Albany. Shortly afterwards, his army was twice defeated by the English, and the king, suspicious of the ambitious designs of his brother, the duke of Albany, sent his only surviving son, James, earl of Carrick, to France; but the prince was captured on his voyage by an English vessel. ROBERTS, David, an eminent Scotch painter, who was intended for the trade of a housepainter, but who, about 1821, went to London, where, during several years, he worked as a scene-painter, in conjunction with his friend Stanfield. By degrees he abandoned scene for Stanfield. By degrees he abandoned scene for and of both sexes. Numbers were daily put to architectural painting, and having obtained death, and the streets were deluged with blood.

some success in the latter walk, he visited Spain in 1832, and upon his return, published a collec-tion of drawings, entitled "Spanish Sketches," which fixed his reputation. From that period his rise was rapid; he became A.R.A. in 1839, and two years afterwards a full academician. To enumerate a few of the best subjects of this confessedly the finest architectural painter of his time, will serve to show the bent of his genius. Perhaps the greatest work of the kind which has ever been given to the world is his "Holy Land, Syria, Arabia, Egypt, and Nubia," a collection of lithographs which were admirably reproduced upon stone by Mr. Louis Haghe. His best Eastern pictures were,—"The Outer Court of the Temple at Edfou," "Jerusalem Court of the Temple at Edfou," "Jerusalem from the Mount of Olives," and the "Statue of the Vocal Memnon on the plain of Thebes." His "Chancel of the Collegiate Church of St. Paul at Antwerp" is a magnificent effort of pictorial art, and is contained in the national collection art, and is contained in the hathona contention at the South Kensington Museum. ROBERTSON, William, rob-ert-son, an historian and divine of the church of Scotland, was educated at the university of Edinburgh, where he took the degree of doctor in divinity; and, having entered into orders, became one of his majesty's chaplains in ordinary for Scotland, and was offered considerable preferment in the church of England, which he declined. His first work was the "History of Charles V.," in which are displayed superior powers of dis-crimination, together with an elegant and very luminous style. For this he was appointed royal historiographer for Scotland. He was also elected principal of the university of Edinburgh. His other works were, "The History of Scotland," not altogether void of partiality; the "History of America," and an "Historical Disquisition concerning India." He was a man

RODERICK, rod'-e-rik, the last of the Visigothic kings of Spain, was the son of Theo-dofred, duke of Cordova, who had been deprived of his sight by King Witiza; but Roderick revolted against, and, after defeating, deprived him of his crown. The sons of Witiza sought the aid of the Moors, who prepared to invade Spain; and in 710 landed, under the command of Tarif, at Tartessus, now Tarifa. In the following year the Moors again landed in greater force, at the foot of the rock of Calpe. The expedition was under the command of Tarik, and the place of landing was termed Gebel Tarik, which became corrupted into Gibraltar. The Arabs advanced into the interior, and were met at Medina Sidonia by Roderick, with a large but badly-disciplined army. A series of desperate engagements, occupying nine days, ensued, and resulted in the deteat of the Goths, the flower of whose chivalry, together with

Roderick himself, were slain. Scott, Southey, and Irving have chosen the conquest of Spain by the Moors for the subject of some of their most

This seat he lost in 1837, but was re-elected in 1841. He again lost this soat in 1847, but was returned, unopposed, for Sheffield in 1849. As an "extreme liberal," he sided with no great party in the house, but chose rather the part of an independent critic of the measures which were proposed in the national council-chamber. His powers as an orator were considerable, though strongly tinged with asperity, a quality which often brought him into collision with the Whigs. He became queen's counsel in 1843, and was also chairman of several companies. As an author he produced a "History of the Whig Party;" "The Colonies of England;" and like-artributed to the "Westminster Review."

In 1865 he moved for an inquiry into the condition of the army before Schastopol, which being carried against the Aberdeen ministry, they resigned. As chairman of that committee, he acted in such a manner as to earn from the nation the gratitude due to the efforts of an honest and independent politician. B. at Ma-

Rogers, Samuel, an emment English poet, was the son of a London banker, in whose house of business he was placed, after I aying received an efficient private education. his earliest years he had a predilection for his carnest years he had a preduction for poetry, and, at the age of twenty-three, pro-duced his first volume of verses, under the title of "An Ode to Superstition, and other Poems." Between the appearance of his first publication and that of his second, "The Pleasures of Memory," which was given to the world in 1702, he travelled upon the continent and in S. otland. Six years later he brought out another volume, after which he remained silent during fourteen years; for he added nothing to his poetical works until the year 1-12, when he published a fragment entitled "Columbus." During this interval, how-ever, he had retired from a tive participation in the affairs of the bade, and had given binaself to the cultivation of the friendship of the cele-braties of his time. "The house of Rogers, in St. Jame's Place, became a little paradise of the location, where, and pictures and other ob-jects of att, collected with care and arranged with shill, the happy owner nested in fastidious case, and kept up among his contemporaries a character in which something of the Horace was blended with something of the Maccaus." "Jagua line" was put forth in 1814; "Human in 1810; and in 1822, the poet, then sixty

years of age, produced the first part of his "Italy." The complete edition of this latter poem was not published until 1836, when it appeared in a magnificent form, having been illustrated, under his own direction, by Stothard, Turner, and Prout, at a cost of £10,000. Up to his ninety-first year he wrote an occasional became the chief of the Huguenots in the reign piece, composed, like all his works, with labo- of Louis XIII.; but upon the taking of Rorious slowness, and polished line by line into ologance. That Rogers was a shrewd observer and brilliant talker, besides a poet, is evinced by the publication of his "Table Talk," which appeared after his death. "We have in his works a classic and graceful beauty," says an eminent critic; "no slovenly or obscure lines; fine cabinet pictures of soft and mellow lustre, and, occasionally, trains of thought and association that awaken or recall tender heroic feelings." He had been in the habit of taking constant exercise till within a short time before his death, and was at last only prevented from ap-pearing in public by an accident with which he met in the streets. After attaining to a large practice as a chan-cery lawyer, he, in 1800, became king's counsel; in 1806 he was knighted, appointed solicitorgeneral, and elected a member of Parliament. In the House of Commons he distinguished himself by his impressive elequence on the Whig benches. He advocated the reform of Parliament, the abolition of the slave-trade, The mitigation of the severity of the criminal sode, and the emancipation of the Roman Catholics. He published one of his speeches, in a pamphlet entitled "Observations on the Criminal Law, as it relates to capital punishment, and on the mode in which it is administered Throughout the remaining years of his life he nobly persevered in his efforts to effect an amelioration of the terribly severe laws relative to the execution of criminal justice; there being, at that period, almost 300 crimes punishable by death. After the dissolution of Parliament in 1818, he was elected for Westminster; but having about that time lost his wife, his mind was affected to such a degree that, in a fit of deirium, he put an end to his life. B. in Kent, 1623; D. 1662.

ROOKE, Sir George, a gallant English admiral, who entered the navy at an early age, and rose by his merit to the first honours of his profession. He gave evident proofs of his skill and courage in many expeditions, particularly in burning thirteen of the French ships at La Hogue, and m the glorious action of Vigo. In 1704 he took Gibraltar by bombardment, after which he obtained a decisive victory over the French fleet off Malaga, in which desperate fight the English lost 2000 and the French 3000 men. Notwithstanding these eminent services, he was, by the influence of the Whig party, obliged to resign the command; whereupon he retired to his estate. B. in Kent, 1650; D. 1709. Rosa, Francisco Martinez de la, ro-sa, a dis-

tinguished Spanish patriot, statesman, and author, who, when not yet gut of his teens, wes appointed professor of moral philosophy in the university of Granada; and as just about this time the national enthusiasm against Bonaparte was at its height, he is said to have turned his professorial chair into a "patriotic tribune." Not being of the age fixed by law for members of the Cortes, he was unable to enter political in 1stl mile Gods

nnleo" and "La vinus de 1 duites tragedy)-both of which tended powerfully to inflame the ardour of the besieged. After the triumph of Spanish liberty, and the vote in favour of the constitution of 1812 (which was mainly due to his efforts), he was named monber of the Cortes for Granada. But he had made himself particularly obnoxious to Ferdinand VII., and in 1814 was sent to a subterranean dungeon, where he remained for six months, standing on the inviolability of his person as a deputy, and flatly refusing all overtures of submission. He was therefore banished to Africa among thieves and cut-throats. When the revolution of Riego occurred, Martinez was recalled, and nominated deputy in the Cortes in 1820; and for many years afterwards was mixed up in the turbulent arena of Spanish polities and revolutions, being sometimes in power, sometimes in opposition, and not unfrequently in exile. His political views appear to have undergone considerable modification, for while chief of the cabinet from March, 1831, to June, 1835, he promoted the famous royal decree which abrogated the constitution of 1812, princinally his own work, but granted guarantees. and confirmed the existence of the two Chambers. In 1839-40 he was in a kind of voluntary banishment in Paris, and Regent Espartero made him ambassador of Spain in that city, In 1842-3 he was ambassador of Spain in Rome. After the restoration of Christina, he entered Narvaez's cabinet, and again went as ambassador to Paris in 1817, and held the office till 1851. when he was elected president of the First Chamber. In 1857 he was appointed secretary of state in Armero Mon's cabinet, and under O'Donnell became president of the council of state. He is described by one of his biographers as "an eloquent orator, a courageous citizen, and a universally-esteemed politician," Senor Martinez de la Rosa will, however, probably owe his reputation with posterity to his literary productions. He published five volumes of his works in 1827 ("Obras Literarias"), in which are his three dramas, "Edipo," "Morayne," and "La Conjuracion de Venecia," A very successful comedy of his may be named also, "La Higa en easa y la Madre en la Mascara" ("The Daughter at Home and the Mother at the Ball"). Some of his other works were, " El Arte Poetica" ("Lyrical Works"), two novels, "Herman Perez del Pulgar" and "Isabella de Solis;" a History of the French Revolution, and six volumes of various works published in the "Spanish Library." He was perpetual secretary of the Academy, and president of the University Council. B. 1789; p. 1862.

Roscoe, William, ros'-ko, an emineut English writer, who was the son of a market-gardener near Liverpool, and having been placed for a short period in a bookseller's shop, was after-wards articled to an attorney. In 1774 his term expired, and he became an attorney; but in the meanwhile he had studied the Greek and Latin, and mastered the French and Italian languages. the also wrote some verses, one of which, upon the art of engraving, led to his introduction to Sir Joshua Reynolds. At the outburst of the French Revolution he defended its principles against the strictures of Burke. In 1796 appeared his fine "Life of Lorenzo de' Medici," a work which soon acquired for him a high reputation, and was translated into French, German, and Italian. His "Illustrations, Historical and Critical, of the Life of Lorenzo de' Medici" followed; and in this work he defended himself against a considerable amount of adverse critiagainst a considerable amount of adverse enti-cism to which he had been subjected. The "Life and Pontificate of Lee X." was his next production, and formed a sort of continuation of the former work; and both illustrating, as they did, a brilliant period of modern Italian history, were hailed as splendid contributions to literature. He dud not publish anything till nearly 70 years of age, when he gave to the world a poem called "Helenore; or, the Fortunate Shepherdess," which was popular in the north of Scotland. He also wrote a number of songs, many of which became favourites with his countrymen. B. 1699; D. 1754.
Ross, Sir John, an English admiral and Artin publication companed his career as a

Arctic navigator, commenced his career as a volunteer on board the *Pearl* frigate in 1786. During the subsequent five years he served on board various ships of the royal navy, but then joined the mercantile marine, returning, however, to the royal service in 1799, as midshipman of the Weasel sloop of war. He became a lieutenant in 1805, and was severely wounded in the following year in a desperate cutting out expedition under the batteries of Bilbao, a feat which was rewarded by a pension of £98 a year. He continued to serve with distinction until the end of the war in 1815, by which time he had attained the rank of commander, and was, in 1818, appointed to the command of the Isabella discovery-vessel, and was sent out, in company with the Alexander, under Lieutenant Parry, to ascertain the existence or non-existence of a north-west passage. The vessels penetrated some distance up Lancaster Sound, when the some distance of limitator South, when the Isabella, which was far ahead of the Alexander, suddenly altered her course, Ross having imagined that he perceived land round the bottom of the bay, forming a chain of mountains con-nected with those which extended along the production, and formed a sort of continuation of the former work; and both illustrating, as ofth and south sides. The narrative of his second voyage was published in 1835; in 1839 he was appointed cousul at Stockholm; in 1850 he was dispatched in search of Sir John Franklin, and, having deemed himself neglected by the government, produced a "Narrative of the Circumstances and Causes which led to the failure of the Searching Expeditions sent by Government and others for the Rescue of Sir John Franklin. He reached the grade of rear admiral in 1851. In addition to the works already quoted, he produced a "Treatise on Navigation by Steam," "Memoirs and Correspondence of Admiral Lord de Saumarez," and "Letters to Sea Officers." n. in Wigtownshire, Scotland, 1777; n. in London, 1856.

Ross, Sir James Clark, captain in the roval navy, and nephew of the preceding, under whom he served as midshipman at the commencement of his career. Between the years 1810 and 1827 he served under Sir William Edward Parry, in four expeditions to the Arctic Seas. In the latter year he was promoted to the rank of commander, and after his return from the second voyage of his uncle, he was, in 1834, made post-captain, in reward of his discovery of the northern magnetic pole. He was next engaged in performing a magnetic survey of Great Britain. In 1839 he was placed in command of an expedition to the Antarctic Seas, the object of which was magnetic investigation. After an absence of four years, during which a vast and valuable body of information relative to magnetism, meteorology, geography, zoology, and botany, was collected, he returned to England. He had discovered a large continent in the Antarctic regions, to which he gave the name of Victoria Land, and an active volcano, 12,000 feet high, which he named Mount Erebus. In 1848 he went out in search of Sir John Franklin, but, like the other explorers, unhappily met with no success. He was one of the most skilful and scientific officers in the royal navy, was accorded the degree of D.C.L. by the university of Oxford, and was fellow of the Royal, Geographical, Astronomical, and other Societies. In 1841 he was created a knight. He produced a "Voyage of Discovery and Research in the Southern and Antarctic

English miniature-painter, whose parents wer both devoted to the arts; his father as a miniature painter and drawing-master. By the time he was nine years of age, the proficiency in drawing of "little Ross" was almost unprece-dented. In the year 1808, at the age of thir-teen, he was admitted a student of the Royal Academy, where his assiduous study attracted the notice of many. The first ambition of the young aspirant was to excel in historical art, and from Benjamin West, the president of the time, he received much kind advice. At fifteen he obtained prizes for large chalk drawings, which were remarkable for correctness and beauty of finish. When he was about twenty, however, he altered his course, and adopted that branch of art in which he became unrivalled. Rosse, William Parsons, Earl of, ross, a modern astronomer and constructor of the magnificent instrument called the "Monster Telescope," received his education at Mardalen College, Oxford, and succeeded to the earldom on the death of his father, in 1891. His best claim to distinction was the magnificent telescope erected under his personal superintendence at Birr Castle, near Parsonstown. It is the largest ever constructed; its speculum is almost six feet in diameter, its tube lifty-six teet in length; and to complete it cost its designer years of anxious labour and experiment, and a great expenditure of money. By its means a more extended knowledge of the surface of the moon, and of the nebula has been gained. Rossi, Pellegrino, Count, an Italian statesman, who, though of humble origin, received a liberal education, studied law at Pisa, and commenced practising at the bar of Bolozna in 1809. In 1814, imbued with a desire to give freedom to Italy, he renounced his profession for that of arms, and, on the overthrow of Murat, fled into Switzerland, where he sought consolation for political disappointments in the pursuits of science. He fixed his residence at Geneva, where, in 1819, he was appointed pro-fessor of law. In 1820 he was elected a member of the council of Geneva, and soon afterwards was sent as deputy to the Diet, when he drew up a report on the revision of the Swiss federal constitution. The moderation of his political views, so closely resembling those of the French Doctrinaires, had brought him into communication with Guizot and De Broglie; and at their instance he unitted Geneva for Parisin 1833. with a view to employment in the service of the French government. On his arrival at Paris he was appointed professor of political economy, was soon afterwards chosen a member of the Institute, was created a peer in 1839; and in 1845, being now a naturalized Frenchman, was appointed ambassador to itome. Through his influence Pius IX, ascended the pontifical throne in 1816; and at his instigation entered upon the liberal career, from which so much was expected, but which was afterwards completely abandoned. Rossin, Gloacchino, rosse', ne, an illustrious Italian composer, was the son of a strolling musician, by whom he was taught the rudiments of his art: but, having a fine voice, he was placed under a skilful tutor in order to acquire the art of vocalization. At twelve years of age he sang in the churches of Bologna; and when, at fifteen, his voice broke, he was entered of the Lyceum of Bologna, in order to acquire a more abstruse knowledge of the musical art. Young Rossini, however, regarded the study of double counterpoint as drudgery, and happening to hear his master, Padre Mattei, observe one day that single counterpoint was sufficient day that single counterpoint was suindent knowledge for a composer who only aspired to write the lighter kinds of music,—"Do you mean to say, Padre," he exclaimed, "that with what I have learned already I could write opens?" "Why, yes," answered the Padre. "Then," replied Rossini, "I mean to write." operas; and I don't want any more lessons." But although he took no more lessons from Mattei, he laboured assiduously at the task of self-instruction. In 1813 he produced his opera of "Tancredi," which at once made its composer famous throughout Europe. Encouraged by this success, he produced a number of other works in quick succession, all of which, howworks in quick succession, all of which, however, were inferior to the work which brought him into popularity. In 1816 he produced his world-famous "Barber of Seville," at Rome. Those of his later works which still keep the stage, are "La Cuncrentola," "La Gazza Ladra," "La Doman del Lago," and "Guglielmo Tell." This last was written at the age of thirty-seven, and with it closed the career of Rossin as a composer. "An additional success would add worthing to my form," he said, "a and add nothing to my fame," he said; "a failure would injure it." After holding the post of manager of the Italian Opera at Paris during some time, he, in 1836, returned to his native country, where he continued to reside till 1856, when he repaired to Paris once more. In 1823, however, the Russian count, who was then a resident at Paris, produced his small work, called "The Truth as to the Conflagration of Moscow." In that pamphlet he commenced: "Ten years have elapsed since the conflagration of Moscow, and I am still pointed out to history and posterity as the author of an event which, according to the received opinion, was the principal cause of the destruction of Napoleon's army, of his subsequent fall, the preservation of Russia, and the deliverance of Europe. Certainly there is something to be proud of in such splendid claims as these; but having never usurped anybody's rights, and being tired of hearing the same fable constantly repeated, I am going to make known the truth, which rlone ought to dictate history." He went on to declare that the fire was not the result of a preconcerted plan, but that it origi-nated in many of the shopkeepers and others having voluntarily applied the flame to their own dwellings. The French, nevertheless, adhere to the opinion that Rostopehin was the author of the confiagration. He returned to Russia in 1825. He was a spirited and witty writer, and produced several works, and also wrote a singular piece of biography, entitled "My Memoirs, written in ten minutes." E. 1765; p. at Moscow, 1836.

He subsequently made himself ruler of Goojerat, Moultan, Peshawur, and Cashmere, where by stratagem he obtained possession of the celebrated Kohl-inoor diamond, now the property of her Majesty Queen Victoria. Having thus extended his dominions upon every side, he assumed, in 1819, the title of maharajah (king of kings). At a later period he invited the European generals Allard, Ventura, and Court, to organize his army; and it was through these officers that the Sikh soldiery became so highly disciplined. RUPLET, Prince, rw'-pert, (otherwise Prince Robert Rupert of Davaria), was the son of Frederick V., elector palatine, by Elizabeth, daughter of James I. He went to England at the beginning of the civil war, and, embracing the cause of his uncle, Charles I., proved himself brave and impetuous, but rash and unskilful as a general of the royalist cavalry. At Marston Moor, his want of discretion was the ruin of Moor, his want of discretion was the time of the king's cause; and, having subsequently surrendered Bristol to the Parliamentarians, after a mere show of defence, he was deprived of his command. He was, however, appointed commander of the king's ships, and served upon the Irish coast; but after being blockaded in port, and chased over the sea by Blake, his vessels were nearly all destroyed by the latter, in 1651. In the reign of Charles II. he commanded the fleet, and distinguished himself in several actions with the Dutch. The last years of his life were occupied with philosophical pursuits, and in making experiments in chemistry, engraving, painting, and mechanics. He is stated, but erroneously, to have been the inventor of mezzotint engraving. B. 1619; D. in London, 1682.

RUSHWORTH, John, rush'-werth, an industrious English compiler, who was educated first at Oxford, and was afterwards called to the bar. In 1640 he was appointed assistant clerk at the House of Commons, being expert in taking down speeches in shorthand. He was employed by the Parliament in several capacities; and his relation, Sir Thomas Fairfax, general of the forces, made him his secretary. He sat for Ber-wick in Richard Cromwell's Parliament. His "Lec-tures upon Architecture and Painting," delivered at Edinburgh, "Notes on the Construction of Sheep-folds," and a pamphlet upon the opening of the Crystal Palace, followed, and were in time succeeded by a Procharse upon Tre-Raphaelitism. The band of young and enthusiastic English painters who, in 1849, sought to effect a revolution in the pictorial art of their time, and who styled themselves the "Pre-Raphaelites," were claimed as his followers by Ruskin, who were claimed as his followers by Muskin, who declared that their style was evolved from a study of the principles enunciated in his "Modern Painters," and it was to make known the beauties and the art-knowledge exhibited in their productions, that he put forth his pamphlet entitled "Pre-Raphaelitism." Not less cloquent in style, or authoritative in tone, were his "Notes on the Principal Pictures exhibited in the Royal Academy," which for several years in succession he published. In 1851 he produced a charming fairy tale, entitled "The King of the Golden River, or the Black Brothers;" and wrote some papers on political economy. Russell, Earl, long and perhaps better known as Lord John Russell, an English statesman, was the youngest son of the sixth duke of Bedford, and received his education at Westminster school and at the university of Edinburgh, where he had the celebrated Dugald Stewart among his teachers. In 1813, being then in his 21st year, he entered the House of Commons as the representative of the Whig borough of Tavistock, which was at the disposal of his father. The strong ministry of Lords Liverpool and Castlereach was then in power, and the young politician went into opposition as a memher of the Whig party. His conscientiousness and talents, no less than the advantage of his birth, concurred to pave his way to the leader-ship of the Whigs. From the outset he enership of the Whigs. From the outset he ener-getically demanded parliamentary reform, and, after having forced the Tory government to make concession after concession, he, in 1830, entered office as paymaster of the forces in the Whig administration of Earl tirey, an administration which was pledged to carry parliamentary reform. Early in the year 1831 he introduced the Reform fall to the House, and after a debate of almost unparalleled violence, its provisions were carried, on the second reading, by a majority of one; but upon the subsequent motion for going into committee, it was

once more introduced, and was passed triumphantly. But now followed the opposition in the In that assembly it was thrown out by a majority of forty-one. The Commons responded by passing a vote of confidence with a majority of 131. The bill was, however, withdrawn, and underwent some slight modifications before it again made its appearance in the upper chamber, when, still meeting with a determined opposition to his measure, Earl Grey resolved to resign. The duke of Wellington came into power at the head of a Tory administration; but the nation was aroused, and loudly trainon; but the handon was aroused, and noutly demanded the Reform Bill. The duke was forced to yield; the Whigs resumed the reins of government, and the Reform Bill passed, During this great crisis Land John Russell conducted himself with much intrepolarly, and won the most favourable opinions of the country at large. When the Wing cabinet of Lord Mel-bourne supplanted the Tory administration of Sir Robert Peel in 1835, he became home sceretary and ministerial leader of the House of Commons. His party remained in office until 1841, and Lord John Russell went into opposition to Sir Robert Peel's Conservative administration till 1846, when, upon the disruption of Sir Robert's party, mainly in consequence of their chief having abolished the corn laws, Lord John Russell succeeded to power. In 1851 his cabinet was weakened by the secession of Lord Palmerston, who, in the following year, defeated his former chief upon the Militia Bill. Lord John Russell thereupon resigned. In the coalition administration of Lord Aberdeen, he held the appointment of foreign secretary curing a few months, when, resigning the post to Lord Clarendon, he remained without a portfolio, but as a member of the cabinet. In 1854 he became president of the Council, and introduced his new Reform Bill, the consideration of which, however, gave way to the more pressing exigencies of the war in which England, allied with France, was engaged with Russia. In 1846 he entered at the Middle Temple and in the same year visited Ireland during the famine as special correspondent of the "Morning Chronicle." He was, however, again taken on the staff of the "Times" in 1847, and was employed in making reports of various public events until the outbreak of the Russian war, when he was selected to proceed to the Crimea, and supply that journal with descrip-tions of the military operations. The result is well known. His brilliant and picturesque pen furnished the public with the most graphic ac-counts of what took place in camp, or in the field, while his quick-sightedness and fearless honesty led him to expose the defective arrangeand the incompetence or inertness of those in command. In brief, he was a prime mover of that inquiry which resulted in improving the condition of the British army before Sebastopol. His valuable contributions were afterwards reprinted in two volumes. In 1856 he became LL.D. of the University of Dublin, and subsequently took the management of the "Naval and Military Gazette." He visited India in 1857, and witnessed the suppression of the Indian mutiny by Lord Clyde. After the outbreak of the civil war in America, he acted for some time as special correspondent of the "Times" in that country; but being refused permission to accompany the Federal army, returned to England in 1862. The emperor of the French thereupon charged him to make researches with the view of producing the metal in quantities sufficiently iarge to become available in the arts. His efforts were crowned with success, and, in 1855, several bars of the new metal were shown at the Paris exhibition. It was found to bear a close resemblance to silver, and to be not heavier than an equal bulk of glass. Medals, brooches, bracelets, ear-rings, spectacles, and even helmets, have been made of it, its cost being less than an equal weight of silver. After ardently prosecuting his studies at Paris, he, in 1703, obtained the posts of sub-curator and demonstrator of natural history in the Jardin des Plantes. At a later period he became professor of zoology, and gave lectures in conjunction with Cuvier. He proceeded to Egypt as a member of the French expedition of 1798, and subsequently received the appoint-ment of professor of anatomy and physiology in the faculty of sciences. In 1808 he was disthe meany of sedences. In 1808 he was dis-patched upon a scientific expedition to Por-tugal; and, in 1815, took his seat in the Chamber of Deputies, as a member for Etampes, his native city. Of that department of science entitled "Experimental Anatomy," which was first developed by the German naturalists, M. de Saint-Hilaire was a profound and brilliant expounder. The noble collection of the Jardin des Plantes furnished him with the means of prosecuting his invaluable researches. So great was the zeal, and so acute the power of analysis and generalization possessed by him, that the influence of his theories sessed by him, that the influence of his encourses has been shown in almost every work upon zoology which has been published within the last quarter of a century. Thus, amongst his other labours, he proved that the bouse of the head of a fish, "and, by consequence, those of the higher animals, were transformations of the simple vertebre; and that the laws of devolupment which applied to the one applied to the other." He gave an exposition of these remarkable laws in his work entitled "Philosophie Anatomique," published in 1818; the same theories were sumported in a small wave which theories were supported in a small work which he also produced in 1818, by way of introduction 909

SAINT-LEONARDS, Edward Burtenshaw Sug-den, Baron, len'-ards, a modern English lawyer, who was called to the bar at Lincoln's Inn in 1807. At the outset of his professional career he obtained a large amount of practice in con-sequence of the popularity of his "Concise and Practical Treatise of the Law of Vendors and Purchasers of Estates." Of this work he himself states, "it was certainly the foundation of my early success in life." Until the year 1817, he was mainly occupied as a conveyancer and chamber counsel, and in preparing for publica-tion several works upon jurisprudence, which achieved a large amount of success. One of achieved a large amount of success. One of these, entitled "A Series of Letters to a man of property on Sales, Purchases, Mortgages, or property on Sates, Fattensies, and registers, Leases, Sottlements, and Devises of Estates, was republished in 1858, with additions, in a work called "A Handy Book of Property Law," in which form it attained a larger share of popularity than was ever before the case with respect to a treatise upon legal ques-tions. In 1817 he devoted his time to the chancery bar, where he obtained very considerable practice. He was made king's counsel in 1822, and in 1828 entered the House of Commons as member for Weymouth. In the fol-lowing year he was knighted and appointed solicitor-general, which office he vacated upon the retirement of the Duke of Wellington's administration in 1831. In 1835 he was appointed lord chancellor of Ireland under Sir Robert Peel, but held the office during only a short period. He resumed the Irish chancellorship in 1841, and held it until 1846. Under the administration of 1852 he was appointed lord chancellor of England, and was created a peer, with the title of Lord St. Leonards. He resigned this post on the retirement of the Conservative ministry at the close of the same year. Although not remarkable as a Parliamentary debater, his profound acquaintance with the law made him an important member of the political party with whom he acted. B. in London, 1781.

by Louis XVI, to assist the colonists in their gle against Great Britain. After seeing service under Washington, he made a tour

in Mexico, and finally returned to his native country. He was appointed colonel in the French army, but to do no active participation in military affairs, he haven a resolved to "study the march of human spirit, in order, eventually, to labour for the advoncement of human civi-lization." In 1785 he set out upon a tour in Holland and Spain, in which latter country he sugge fed to the government several important social improvements. Returning to France just as the revolution was burstness forth, he warmly sympathized with the movement, which he regarded as a work of social repoperation; but he took no share in the sub- quart events. He entered into partnership with a Prussian nobleman - the Count de Redem, -and Lought a considerable quantity of confecated land, with the trial school; but the scheme was a failure, and Saint-Simon retired from it, after losing a vast sum of money. He had now attained his thirtycighth year, and came to the resolution of de-voting himself to what he termed a "physicapolitical" reformation. In order to qualify himself for the task, he tead, up his residence near the Ecole Polyt, chaique, where he gave his "whole attention during three years, necord ing to his own mathods, and with all the ap-pliances which manny could furnish, to the study of the physical sciences—mathemat astronomy, general physics, and chemistry.

1801 he removed to the neighbourhood of the Ecole Médecine, in order, in a similar man-net, or add to his stook of ideas regarding residence in Rossia in 1858; "The Seven Sons organized beings. He next proceeded to make his "experimental education;" he mar-ried, and "continued to pursue his prescribed career." Balls and dinners followed each other in rapid succession; every new situation that money could create was devised and pre-pared,—good and evil were confounded; play, discussion, and debauch were alike gone into: the experience of years was crushed into a short space, -even old age was artificially realized by medicaments; and that the loathsome might not be wanting, this enthusiast for the universal would inoculate himself with contagious discases. In 1807 his "experiments" ended. His marriage proved an unhappy one; and he was left so poor that he became a clerk in the Mont de Piété (government loan office), at a yearly salary of £40. In 1812, being then in his fiftysecond year, he considered it time to "establish his theories." He commenced the publication of a number of remarkable works, which, however impracticable and visionary in their character, attracted around their author a circle of enthusiastic disciples; among whom were Augustin Thierry the historian, and Comte, the future author of the "Positive Philosophy." His last efforts were directed towards the foundation of a new religion, which he called the "New Christianity;" one of the objects of which was "the most rapid possible amelioration, physical and moral, of the condition of the class the most numerous and poor. To attain this object, society was to be reorganized upon this formula: -to each man a vocation according to his capacity, and to each capacity a recompense according to its worth." Before breathing his last, this extraordinary man gave his final instructions to his chief disciples. His most imstructions to lus chief oisepies. After the dath of its founder, "Saint-Simonism, experienced some curious mishaps. Several of its most confusiants followers established altitle church, where a mystical theosophy was propounded. In 1830, a weekly journal was started in furtherance of the movement, which had now attracted numbers of the educated classes to embrace its dogmas : but a split occurred between the leaders of the sect—one party forming a kind of mo-nastic community, which, after a short time, was suppressed by the government, M. In 1821 he acted as secretary to an Indian conference at Chiengo. In the following year he was acting as agent for Indian affairs in the north-western provinces, and while dis-charging these duties became acquainted with Miss Johnston, a young lady who had re-ceived a high education in Europe, but was the daughter of an Irish gentleman married to the daughter of an Indian chief. From this lady, who became his wife, he received the most valuable assistance in prosecuting that course of research into the languages, traditions, and or research into the Indian tribes, which, even from his carliest youth, it had been his ambi-tion to pursue. In 1832 he was charged with the conduct of an expedition to the Upper Mississippi and beyond St. Anthony's Falls. Of that mission he produced an account, in his "Expedition to Itasea Lake," a work in which he showed that he had succeeded in tracing the Mississippi up to its ultimate forks, and to its actual source in Itasea Lake. He was after-wards described as "the only man in America who had seen the Mississippi from its source to its mouth in the Gulf of Mexico." He subsequently acted as commissioner to the Indians for the purchase of territory upon the north-western frontier; as superintendent of Indian affairs; and in capacities of a like nature. In 1841 he took up his residence at New York, afterwards making a philological and archeological tour in Europe and Canada. At a later period he devoted himself to the task of arranging and publishing his vast stores of information upon Indian language, antiquities, and ethnology, which he had spent thirty years in collecting. An enumeration of several of this learned gentleman's most important publications will afford a notion of the great services he performed relative to the aboriginal history of his native land. His greatest work was entitled "Historical and Statistical Information respecting the History, Condition, and Prospects of the Indian Tribes of the United States;" and of searcely less value are, "American Indians, their History, Condition, and Prospects;" Personal Memoirs of a Residence of Thirty Years with the Indian Tribes on the American Frontiers;" "The Myth of Hiawatha, and other Oral Legends of the North-American Indians" (from this work Mr. Longfellow derived the legend of his poem of "Hiawatha"); "A Complete of his poem of "Intawatia", "A Complete Lexicon of the Algonquin Language, the most primitive and widely-diffused aboriginal lan-guage," and "Algo Researches." After the battle of Canner, he prevented the Roman youth from abandoning their country as they had intended, out of despair of saving it. Sciple was elected addle at the age of 21. His father and uncle having fallen in battle, he obtained the command in Spain, where he de-feated the enemy and took New Carthage. He put an end to the war in that country by a decisive battle, and then crossed over into Africa, where he defeated Hasdrubal and Syphax, American defended instituted and opinion of the battle of Zame, which victory produced peace between Rome and Carthage. Scipio obtained a triumph and the appellation of Africanus for these brilliant services. He was also twice honoured Hant services. He was also twice nonductive with the consular dignity; but cuvy of his glory brought upon him a charge of taking bribes. Scipio appeared before the people; and only saved himself by recalling to them his victory at Zama. The affair, however, was again brought before the tribunes; but he had retired to his villa near Liternum, where he continued to reside until his death. In 1750 he sailed from Whitby; but, having excited the jealousy of his superiors througholisplaying greater mantical skill, he was compelled to leave the vessel and enter an ordnance armed store-ship, in which he was captured by the Spaniards. He effected his escape, however, and returned to his father's farm; but, after an interval of about three years, again took to the sea, having entered a whaleship as a common seaman. After making a number of voyages, he rose to the command of the vessel, and subsequently became the most successful whaling captain of his time. After making thirty voyages, he, in 1823, retired from active life with an ample competency. He was the inventor of the "round top-gallant crow'snest," which was stated to be one of the greatest boons given to modern Arctic voyagers, his retirement he occupied himself with various schemes of social improvement, and in 1926 schemes of social improvement, and in 12-20 published an "Essay on the Improvement of the Town and Harbour of Whitby, with its Streets and Neighbouring Highways." In 1806 he, with his father, reached a higher latitude than he like of heretofore gained, viz., to within 510 miles of the North Pole. On attaining his 21st year, his father resigned the command of the vessel to him. In 1817 Sir Joseph Banks endervoured to obtain for him the commission of proceeding upon a voyage of exploration towards the North Pole; but the Board of Admiralty, in conformity with a rule of the service, selected an officer of the royal navy to carry out the enterprise. 1820, after having made seventeen whaling voyages, he produced a most valuable work, cu-titled, "An Account of the Arctiv Regions, with a History and Description of the Northern Winde Fishery." Two years later he published a second remarkable work, entitled, "Journal of a Voyage to the Northern Whale Fishery, in-cluding Researches and Discoveries on the Eastern Coast of West Greenland," He quitted the service at that time, and was shortly after-wards elected a fellow of the Royal Societies of wards elected a fellow of the inquisassesses. He is believed to have studied at Paris, and to have subsequently visited the court of the emperor Frederick II. Returning to his native country, he is supposed to have been employed in various important services by Alexander III., who knighted him after the battle of Largs. His skill in chemistry and mathematics caused him to be regarded as a magician. Fragments of his works on natural history, mathematics, and philosophy remain. Dante speaks of him as a magician, in the "Inferno," and frequent allusion is made to him by Boccaccio and other Italian writers. B. in Scotland, early in the 13th century; supposed

Scott, Sir Walter, an illustrious Scotch author. In his carliest years he was allicted with more than the ordinary ailments of childhood. When scarcely two years of age, his right leg was found to have become suddenly powerless, and the previously healthy boy was pronounced as lame for life. In his eighth year he appeared to have gained an accession of strength, and was sent to the High School of Edinburgh: but in a few months he was once more prestrated upon a sick couch. This hap-pened at the close of the year 1784. His naturally strong constitution triumphed over this, almost the last attack made upon it by disease, and in 1786 he was sufficiently recovered to be apprenticed to his father, a writer to the Signet. This took place when he was in his fifteenth year; but the youthful invalid had, meanwhile, been accumulating knowledge and arranging ideas, had been feeding an imagination stimulated by sickness, with stores which, though not likely ever to be utilized in his practice as a lawyer, were to prove of the most essential service to him in his career as an author. Circumstances combined to give to his 927

duct the Scotch lawyer's son to greatness. His grandfather at Sandy Knowe, on the Tweed, and a maiden aunt, who for a time had charge of him, were able to narrate to him those legendary tales upon which his mind longed to dwell. in his second illness, too, he was permitted to devour the contents of a circulating library, rich "in the romances of chivalry, and the ponderous folios of Cyrus and Cassandra, down to the most approved works of modern down to the most approved works of modern times;" and he afterwards said, "I believe I read almost all the romances, old plays, and epic poetry, in that formidable collection." As he grew older and stronger, he took long rambles on foot or on horsebuck through the Highland and border counties, during which he was continually making additions to his stores of legendary tales, or marking character, or observing nature. He made acquaintance with the "Reliques of Ancient Poetry," while upon a visit to an uncle who resided near Kelso. He says, "In early youth I had been an eager student of ballad poetry, and the tree is still in my recollection beneath which I lay and first enrecollection beneath which I lay and lirst en-tered upon the cuchanting perusal of Percy's 'Reliquus of Ancient Poetry,' although it has long perished in the general blight which allected the whole race of Oriental platanus to which it belonged." The perusal of this, and the kindred works of Herd and Byans, led him towards philological and antiquarian research. and while attending the lectures of Dugald Stewart, m 1790, upon moral philosophy, he wrote an essay upon the "Manners and Cus-toms of the Northern Nations of Europe," which, together with others on the origin of the Feudal system, the Scandinavian Mythology, and the authenticity of Ossian's poems, subsequently composed, he read to the Specula-tive Society in 1792-3. He was called to the bar in 1792; in 1799 he received the appointment of sheriff of Selkirkshire, and in 1806 became one of the principal clerks of the Court of Ess-sion. To these sources of income were added a small property inherited from an uncle, and a moderate fortune received with his wife, Miss Carpenter, whom he married in 1797. His circaustances were, accordingly, favourable for his following that career of literature to which his inclination and ambition invited him. He had long been addicted to verse-making, and had published, in 1790, a translation of Bürger's "Leonora" and the "Wild Huntsman," which marked the commencement of the poetical or first phase of his literary career. In 1799, Göthe's "Gotz of Berlichingen," the ballad of "Glenfinhas," and "The Evo of St. John," followed; and when, in 1895, he gave to the public the "Lay of the Last Minstrel," he became the greatest poetical favourite of the day, "Maradon," the "Lady of the Lake," "Don Roderick, "Rokeby," the "Lord of the Isles," the "Bridal of Triermain," and "Harold the Dauntless," followed in rapid succession. The comparative fadure of the two last works, which were published anonymously, seems to ve decided Scott to abandon verse for prose.

The second great epoch of his literary life may be said to have commenced with the anonymous besaid to have commenced with the anonymous publication of "Maveley," in 1844. In four years it had for successors "Guy Mannering," the "Antiquary," the "Black Dwarf," "Glo Roy," and the "Heart of Mid-Lothian." His name was not placed upon

these productions; but, although the secret of Scott a healthy intellect was engrafted on a their authorship was well kept by his printer and publisher, the public began to regard Scott, the poet, as the "Great Unknown." But his active pen was not alone engaged upon the fine novels which he continued to throw off with so much facility. He was secretly in partnership with Ballantyne, his printer, and had many transactions with Constable, the Edinburgh

view;" he wrote the Life of Dryden and of Swift, the biographical and critical prefaces to a collection of the English novelists, and furnished notes to Sadler's Correspondence, and works of a kindred style. In this way he was engaged between the years 1796 and 1826. His novels and poems had made him famous, and had, moreover, raised him to apparent affluence. His fine manly character caused him to be beloved by a large and distinguished circle of ac-The magniticence of his disposiquaintances. The magnificence of his disposi-tion incited him to enact the rale of one of those great feudal chiefs which his pen so pie turesquely portrayed. Confiding in his fertile turesquely portrayed. Confiding in his fertili-genius, he became the proprietor of Abbots-ford, where, in the intervals of literary com-position, he dispensed the hospitalities of a prince. In brief, the interval 1820-29 may be deserfled as one gargeous dream. But the commercial crisis of the latter year made hand-rupts of Constable & Co. and I-allamyros & Co. "A state of affairs," according to the Seatch term, was drawn up, and, in consequence of his connexion with those firms, he was found to be liable for a sum of about \$147,000. Yet be was undaunted before this fearful load of debt. "Gentlemen," he said to his creditors, "time and Lagainst any two. Let me take this good ally into my company, and I believe I shall be able to pay you every farthing." He gave up all his property, proposed to 1 ge the receipts of his literary labours in the hands of trustees for the payment of his creditors, retired into modest lodgings, and went resolutely to work to wipe off his liabilities. "It is very hard," he said, "thus to lose all the labours of a lifetime, and oc made a poor man at last, when I cought of the right of the rhoir of Ely Cutheto have been otherwise. But, if God grant me imas at Excler College, Oblind; and the relife and strength for a few years longer, I have, storation of Hereford cathedral and St. Mino doubt that I shall redeem it all." This last
unfortunate period during which a male and steady charter of the research of the unfortunate period, during which a noble mind uniortunate period, during which a none and was struggling to accomplish a Herculcan task, endured from 1820 to 1832. "The Hi tory of Napoleon," "The Letters on Demonology and

Napoleon," "The Letters on Demonology and ft," and such works, were produced to aid the good cause he had at heart; but al though he did not shrink from the responsibilities which lay upon him, his overtaxed faculties gave way beneath the excessive mental toil to which they were subjected. The great object of this, the dark and closing period of his life, was however attained. Before his death, he had materially decreased the load of debt, and, after that unhappy event, the profits of his writings wiped away the whole. It would be unnecessary to append a complete list of his works: they are too well known, and, fortunately, too easily accessible to the whole reading community, to need it. "Time alone," says an eminent authority, "can decide how much of his writing, will survive, and white place they have been supported by the will be the survive will be the

powerful will; that he had a natural and easy play of humour, with no inconsiderable portion play of indinour, with no inconsiderable person of poetical imagination, and a large share of that power of apprehending and portraying character which is the great charm of Fielding, A great part of his life he indulged in a dreamworld ... his own; but when rudely awakened by adversity, he submitted to the consequences with heroic fortitude. He was a great and good man." His house and estate at Abbotsford good man. Its moise and estars at Ambotstord became the property of J. R. SEAR-ALIM I., sha'-a-lim, emperor of India, succeeded his father, Aurungzebe, in 1707. His short reign was chiefly spent in contesting the throne with his two brothers, Azim and Cam-bakhsh, who had been left the kingdoms of Bejapor and the Decean. Both these ambitious princes were defeated and slain in succession. Meer Hussein-Khan, an eminent native historian, thus describes his character:—"This emperor was extremely good-natured, and mild even to a fault; but very delicient in firmness, for which quality, indeed, the princes of the house of Timour have never been remarkable in later times." SHARSPERE, William, shalk spere, the greatest

pec of Engiand. It is to be regretted that the materials for Shakspere's life should be so lamentably deficient. Though it is not entirely true, as Steevens, one of the editors of his works, declares, that "all that is known with a works of a death it is that have the state of any degree of certainty is, that he was born at Stratford-upon-Avon, married, and had children there; went to London, where he commenced actor, and wrote poems and plays; returned to Stratford, made his will, died, and was buried;" -it must, nevertheless, be admitted that the only foundation we possess whereon to build a biography of the poet are a few parish regis-ters, wills, and title-deeds. As Mr. Hallam truly observes, "All that insatiable curiosity and unwearied diligence have detected about Shakspere, serves rather to disappoint and perplex than to furnish the slightest illustra-tion of his character." It is not the register of his baptism, or the draft of his will, or the or-thography of his name, that we seek. No letter of his willing to mand of his will. of his writing, no record of his conversation, no character of him, drawn with any fulness by a contemporary, can be produced. The account of Shakspere's life which has been most comof Shakspore shie which has been most com-monly accepted, is that given by Rowe, who wrote it mainly from the statements and anco-dotes which Betterton the actor collected while but these turbulent and ambitious chieffaini upon a risit to Statiord, in the beginning of soon reduced him to the condition of a captive, the last century. As it is impossible to give a When Delhi was taken in 1783 by Gholam place in this article to the various theories of

the many commentators upon Shakspere's biography, it will be best to follow Rowe, but afterwards to indicate what portions of his statewards to indicate what portions of his state-ment are erroneous, according to the discoveries of the most diligent of recent inquirers. Rowe says the poet's father, "who was a considerable dealer in wool," had so large a family—ten chil-dren in all—that, though William was his eldest on he could circ him but a country discoverson, he could give him but a scanty education. He was, indeed, for some time at the grammar-school at Stratford, where he learnt the rudiments of the Latin language, but was prevented from making any further progress by being While he was yet very young, he married the daughter of one Hathaway, a substantial farmer in the neighbourhood. In this kind of settlement he continued till, by an act of folly and dissipation, he was obliged to leave the country and his family. He had, by a misfortune com-mon to young fellows, fallen into bad company, and amoingst them some who were in the practice of deex-stelling. By them he was prevailed upon, mere than once, to engage in robbing the park of \$\text{Si}\$ Thomas Luey, of Charlecote, hear Stratford. For this, continues Rowe, he was prosecuted by that gentleman, as he thought somewhat too severely, and, in order to avenge that ill-usage aballad upon him, which is said to have been so bifter that the prosecution was redoubled, and he was obliged to leave his business and family in Warwickshire for some time, and sock shelfer in London. and amongst them some who were in the pracshire for some time, and seek shelter in London. Here he formed an acquaintanee with the players, and was enrolled among them, as his name is in the list of performers prefixed to several old plays, though what sort of characters he performed does not appear. Mr. Rowe observes that he never could meet with any further account of him as an actor than that his highest part was the Ghost in his own "Hamlet." We are equally ignorant which "Hamlet." We are equally ignorant which was the first play he wrote, though the dates of many of his pieces are easily fixed by particular passages. Queen Elizabeth had several of his plays acted before her, and, without doubt, presented him with many marks of her favour. She was so pleased with the character of Falstaff in the two parts of "Henry IV." that she com-manded him to exhibit the knight in love; on manded film to exhibit the kingut in love; on which occasion Shakspier wrote his rich and admirable comedy of the "Merry Wives of Windsor." The earl of Southampton was his particular friend, and hearing that he had an inclination to make a purchase, but wanted the means he genroomaly arent him £1000. Shakmeans, he generously sent him £1000. Shak-spere was also very intimate with Ben Jonson, who gives him a high character, in his "Discoveries." After conducting the theatre many years with great reputation, he retired to his native place, where his wit and good nature innative place, where he we that goes matter the troduced him to the acquaintance of the gentle-men in the neighbourhood. Thus far Rowe, the earliest biographer of the great poet; but the new circumstances of Shakspere's life and the new circumstances of Shakspere's life and ancestry, which have been made known, would seem to prove that John Shakspere, the father, was a small landed proprietor who cultivated his own soil; that when Shakspere was recalled from school in order to assist his father, the family consisted not of ten but of five children. Malone assumes that the means of John Shak-spore had become straitened; but the storg of the poet's having been taken home from school before he had "attained a profidency in the

Latin language," was evidently conceived to fit

a theory long maintained, but now being rapidly exploded,-that Shakspere's works manifest an "ignorance of the ancients." How much more rational is the following hypothesis, taken from the English Cyclopedia," and written probably by Mr. Charles Knight himself, the author of the best life of Shakspert that we possess?—"The free school of Stratford was founded in the reign of Henry VI., and received a charter from Edward VI. It was open to all a charter from noward vi. It was open to all boys natives of the borough, and, like all the grammar-schools of that age, was under the direction of men who, as graduates of the uni-versities, were qualified to diffuse that scholarship which was once the boast of England. We have no record of Shakspere having been at this school; but there can be no rational doubt that he was educated there. His father could not have procured for him a better education anywhere. It is perfectly clear to those tion in where. It is perfectly clear to those who have studied his works (without being influenced by prejudices which have been most carefully cherished, implying that he received a very narrow education) that they abound with evidences that he must have been solidly grounded in the learning-properly so calledwhich was taught in the grammar-schools. As he did not adopt any one of the learned professions, he probably, like many others who have been forced into busy life, cultivated his early scholarship only so far as he found it practically useful, and had little leisure for un practically display. His mind was too large to make a display of anything. But what pro-fessed scholar has ever engrafted Latin words upon our vernacular English with more facility and corre-tness? And what scholar has ever shown a better comprehension of the spirit of antiquity than Shakspere in his Roman plays?" The information which Betterton collected and Rowe made use of, as to the early marriage of Shakspere and Anne Hathaway were married in 15-2, the poet being then eighteen and a half and Anne twenty-six years old. The stories that Sh e, when a boy, followed his father's trade of a butcher, and that when he "killed a calf, he would do it in high style and make a speech,"--that he had been a schoolmaster, a lawyer's clerk,--that he had stolen Sir Thomas Lucy's deer, that, after going to London he held the horses of those who rode to the theatre during the performances, were Stratford tradiduring the performances, were Strautour tradi-tions, which commentators endeavour to explain away by diverse means. Malone disposes of the deer-stealing tradition by affirming that there was no park at Charlecote at the time, and that, consequently, there was no "local habitation" for the stolen deer. Again, it is urged that until Shakspers drew the rich and intellect classes there by his works, they did not visit the theatre at all, and that those frequenters of the playhouse who found pleasure in the rude and playhouse who found pleasure in the rude and unrefined entertainments there provided, we too poor to keep horses. Much nearer the truth would appear to be the London tradition, preserved by old Aubrey, who says, "This William, being naturally inclined to poetry and acting, camelled London, it guess about eighteen, and did act exceedingly well. He began early to make essays at dramatic poetry, which at that time was very low, and his plays took well." According to this view, we may imagine the young man, not holding horses, but boldly

attempting to bestride Pegasus, and by engaging in the composition of his poems of "The Rape of Lucrece" and "Yenus and Adonis," for which of Durrees and "venus and adonis," for which he had models in Chaucer and Spenser, fitting himself for that greater task, his dramas, for which he had no printed models, but only nature, which lay all before him. Pursuing the same theory, we may imagine the young man first acquiring a footing in the theatre, as a poet of whose talents, both as an actor and playwright, his fellow-townsmen and countynuen, Burbage and Greene, leading actors and shareholders of the Blackfriars Theatre, were anxious to avail themselves. But it is assumed that, because no mention had been made of him as an author fill about 1692, he had not produced any of his plays before that date. It is, at any rate, certain that, from 1589 he had been a shareholder in the theatre, and moreover a man of importance among his friends and fellows. It is not necessary here to enter upon the con-troversy relative to the dates of Shakspere's plays. It has been ascertained beyond doubt, however, that his first printed drama was "The First Part of the Contention" (Henry VI., Part It, which was in 1594. In 1597 he purchased the best house in his native town, called by Dagdale "a fair house, built of brick and timber." This is the purchase which the Earl of Southampton is said to have enabled him to make by presenting him with £1000; but at the period in question he had become a man of period in question he has become a han of substance, was an important shareholder in both the Globe and Blackfriars theatres, and was beyond the need of such prodigal bounty. After the accession of James I. to the English After the accession of sames it of the English throne, in 1603, Shakspere, apparently desirons of retiring from his profession of an actor, is thought to have applied for the mastership of the queen's revels, and to have been the person spoken of in the following letter from Sir Thomas Egerton to the lord-keeper:—"It seemeth to my humble judgment that one who seemeth to my humble judgment that one who is the author of plays now daily presented on the public stages of London, and the possessor of no small gains, could not with reason pretend to be master of the queen's majesty's revels; forasmuch as he would sometimes be asked to approve and allow of his own writings." Daniel, approve and allow of his own writings." Daniel, a contemporary poet, obtained the appointment. About 1604 he is supposed to have retired to Stratford, where, during the last twelve years of his life, he is surmised to have produced "Lear," "Julius Cœsar," "Groileans," "Gymbellne," "The Tempost," the "Winter's Tale," and others of his plays. In the "Diary of the Rev. John Ward, Vicar of Stratford-upon-Aron," "cently discovered in the library of the recently discovered in the library of the Avon, Recency ansovered in the interpret of the Modical Society of London, the following entries were found:—"I have heard that Mr. Shakspere was a natural wit, without any art at all. He frequented the plays all his younger time, but in his elder days lived at Stratford, and supplied the stage with two plays every year, and for it had an allowance so large that he and for 16 had an anowance so large that he spent at the rate of £1000 a year, as I have heard. Shakspere, Drayton, and Ben Jonson had a merry-making, and, its seems, drank too lard; for Shakspere died of a fever three contracted!" These entries were made at least the contracted. thirty-four years after the great poots death, and were probably exaggerated statements. In 1775, however, he directed his attention towards literature, and produced his comedy of "The Rivals," which, upon the first representation, was unsuccessful, but subsequently became popular. The farce of "St. Patrick's Day" was his The farce of "St. Patrick's Day" was his second production, which was quickly followed by the "Duenna," according to Hazlitt, "a perfect work of art: the songs are the best that feet work of art; the sones are one ear one were ever written, except those in the 'Beggar's Opera.' They have a joyous spirit of intoxica-tion in them, and strains of the most melting tenderness." He suddenly became a proprietor of Drury-lane Theatre; but whence he derived the money necessary to take that step has never the money necessary to take that step has never been shown. In 1777 he sightly altered Yan-bruch's comedy of "The Relayse," and put it upon the stage under the title of "A Trip toh Scarborough." In the same year also be broad-out "The School for Scandal," of which Leigh Hunt observes, "with the exception of the great a length of dialogue without action in its great a ringin of danger without action in its earlier scenes, it is a very concentration and crystallization of all that is sparkling, clear, and compact in the materials of pure comedy." The line farce called "The Critic" was written in 1779. Of it Leich Hunt remarks, that it is "in some of its most admired passages little better than an exquisite cento of the wit of the satirists before him. Sherolan must have fold same in the same of this kind; for the kind; for there was every call in it upon the powers he abounded in—wit, banter, and style, and none upon his good-nature," Through style, and none upon its governance. to one of the princes of Hesse. The new method of engraving is supposed to have been discovered between 1637 and 1641; but it has been discovered between 1637 and 1641; put that seem positively ascertained that Siegen sent to the landgrave of Hesse a proof of his mother's portrait in 1642, and that this was the first impression ever taken from a plate engraved after the mezzotilu menner. Upon the conclusion of the Thirty Years' War, in 1648, he retired from military service, in which he had been engaged, and devoted his leisure to perfecting the new art. He made the acquaintance of Prince Rupert at Brussels, in 1654, and com-municated his discovery to him. After Rupert municated his discovery to him. After Rupert had taken up his residence in England, hepractised mezzotint engraving, and produced a specimen of it for Evelpris "History of Engraving," wherein it is erroneously stated that the prince was the inventor. Evelyn, who works a history of the art, which was intended to be read before the Royal Society, therein stated "that this invention, or now manner of chalcography, was the result of chance, and improved by a German soldier, who, espying some scrape on the barrel of his musket, and being of an incenious spitit, reshued won it till being of an ingenious spirit, refined upon it till it produced the effects you have seen." The statement made by Evelyn was the origin of the account, long believed, that Prince Rupert

republic, was educated for the ecclesiastical pro- imagined that this friend of liberty had necesrepublic, was enucated for the excessional pro-fession, and rose to the position of vicar-sarily a liking for the English nation, and, the general and chancellor of the diocese of Chartres, But, from an early period of his life, his mind But, from an early period of his file, his limited was strongly disposed towards the study of politics; and, some time before the Revolution of 1789, he evinced his participation in those ideas which were to prove the destruction of the monarchy and government. When Louis XVI, summoned the States-general, Sièves produced three pamphlets upon the questions of the day, which were read with avidity, and were the means of making a political celebrity of their author. He was elected deputy for Paris; and, upon the refusal of the nobility and clergy to unite with the "Tiers Etat," he boldly counselled the people's representatives to form themselves into an independent body. The National Assembly thus sprang into existence. In the subsequent proceedings, which resulted in the Revolution, Sières played a prominent and energetic part. It would appear, however, that he did not fully comprehend the alarming tendencies of the innovations of which he had been so eloquent an advocate; for, on expressing ueen so coquent an advocate; for, on expressing his disapprobation of some of the Assembly's decrees, Mirabeau replied to him, "You have unloosed the bull, and you complain that it gores you." In 1701 he was offered, but refused, the appointment of constitutional bishop of Paris, During his lifetime, and indeed until quite recently, he lay under the stigma of propagation, bishop of the Acade he Line. until quite recently, ne say under the signila of pronouncing himself for the death of Louis XVI., with the saccasm, "La mort sams phrase" (Death without phrases). It has been proved, however, that, although he was among those who roted for the death of the French monarch, he did so in silence. During the Reign of Terror, he productly retired from the capital; and, when afterwards asked what had been his conduct in that terrible interval, he replied, "I have lived." At the death of Robespierre, he reappeared and regained his former high position. An attempt to assassinate him was made in 1797, by the Abbé Poule; but he escaped with a shattered hand. He maintained his imperturbability, however, and quietly said to his servants, "If M. Poule should return, inform him that I am not at home." In the following year he was sent to In the following year he was sent to Berlin, to negotiate a treaty of alliance between France and Prussia, but without success. He became a member of the Directory upon his return. Growing more powerful every day, he was nevertheless an object of the deepest harred with the ultra-republican party. To strengthen himself against these enemies, he entered into his famous alliance with General Bonaparte. After the revolution of the 18th Brumaire, he was appointed consul, with Bonaparte and Roger Ducos. But the ambitious Corsican soon cellipsed Sièves, who, accustomed to command, could not obey, and consequently tendered his resignation in 1799. He retired with a reward of 600,000 francs, a grant of land, and a man-sion in Paris. He was subsequently offered the presidentship of the senate, under the empire, but refused the honour, accepting, however, the title of count. When the Bourbons were restored, Sièyes was exiled; and although he re-turned to France after the Revolution of 1830, he continued to live in retirement. Dumont thus speaks of him:—" His manner was neither frank nor engaging: he was a man with whom

His first published work was, however, the "Picture of Tuscan Agriculture," which appeared at Geneva in 1801. This was succeeded by a work upon political economy, in which the views of Adam Smith were fidlowed. In 1805 he set out up an a tour through Ifaly, in company with Madame do Stael, with whom he had become acquainted at Geneva. That journey turned his attention to the history of the land of his ancestors; and, accordingly, in 1807 he published his first historical work, under the title of the "Italian Republics." He also wrote Italian biographies for the "Biogra-phic Universelle" of Michaud. His "Histore des Français," considered to be his greatest work, was commenced in 1819, and occupied his pen till the close of his life; but in the meanwhile he gave to the world several less im-portant, but, nevertheless, highly valuable works; the chief of which were, "Lectures upon the Literature of the South of Europe" (transthe Internative of the South of Faragae (translated into English by Thomas Roscoe, and published in Ishhu's Standard Library); "History of the Fall of the Roman Empire and of the Decline of Civilization;" and "Studies in Social Science."

He endeavoured to reconcile the disputes existing in the Eastern Church, partipaties existing in the ease of Cyril, bishop of Alexandria, and John of Antioch. Some of the epistles which he composed with regard to those controversies are extant, and are included in the collection of Constant. He was also a munificent patron of learning, and is stated to have left 5000 silver marks to be expended in the embellishment of ecclesiastical structures. p. 440

SIXTUS IV., Pope, was the son of a fisherman on the coast of tienoa, but became a monk of the order of the Cordeliers. His abilities proeured him the chair of divinity at Padua and other universities of Italy. He also became general of his order, and was honoured with the general of his order, and was considered what he cardinalship by Paul II., whom he succeeded in 1471. He is accused of having been a par-ticipator in the conspiracy of the Pazzi, the object of which was to destroy the Medici family. (See Pazzi.) He also endeavoured to raise a new crusade against the infidels, but without success. Sixtus issued a bull granting indulgence to those who eclebrated the feast of the Immaculate Conception of the Virgin.

After the death of Gregory XIII, the cardinals were divided as to the chetion; when, considering hat Montaltowas an infirm old man who could not live long, they united in choosing him to the the ant chair in Uess. The election was no somer declared, than, to the astenishment of all, he stroob into the midst of the chapel, threw away his crutch, and began to sing the Te Deum with a loud voice. He commenced his pontifi-cate by clearing the Ecclesiastical States of the numerous bands of robbers which infested it. He also punished with great severity all kinds of vice, and was inflexible in the a ininistration of justice. He limited the number of cardinals to seventy, raised the famous obelisk which Caligula had caused to be brought from Spain, and reformed many abuses which prevailed in the government. He excommunicated Queen Elizabeth, but is stated to have secretly ad-mired the opposition made by the English sovereign to the ambitious projects of Philip II, of Snain. He embellished Rome with several fine structures, and built the Vatican Library. By his orders a new version of the Bible in Latin

body commonly called the Mormonites. From body commonly cannot the Mormonites. From an autobiographical account left by himself, as well as from a sketch of his life purporting to be written by his mother, it would appear that he was the son of a farmer of Sharon, Windsor county, Vermont. According to his own state-ment, he, when about 14 years of age, began to reflect upon the importance of being prepared for a future state, and therefore retired to "a secret place in a greve, and began to call upon After having received the Lord many visits from the angels of God, unfolding the majesty and glory of the events that should transpire in the last days, on the morning of the 22nd day of September, 1827, the angel of the Lord delivered the records into my hands. These records were stated to be engraven " in Egyptian characters," on plates which had the appearance of gold, and with them Joseph Smith further stated, though in the vaguest way, that he found "a curious instrument, which the ancients called Urim and Thummim, which consisted of two transparent stones set in the rim, on a bow fastened to a breastplate." Through the medium of this instrument, he professed to be able to translate the records, which were said to have been written by Mormon, a Jewish prophet, and to contain a history of ancient America, from its first settlement by a colony that came from the Tower of Babel, at the confusion of languages, to the beginning of the 5th century of the Christian era. His own account of what was contained in the records was, "that America, in ancient times, was in-habited by two distinct races of people. The first were called Jaredites, and came directly from the Tower of Babel; the second race came directly from the city of Jerusalem, about 690 years before Christ. They were principally Israelites, of the descendants of Joseph. The Jaredites were destroyed about the time that the Israelites came from Jerusalem, who succeeded them in the inheritance of the country. The principal nation of the second race fell in battle towards the close of the 4th century. This book also tells us that our Saviour made his appearance upon this continent after his resurrection; that they had apostles, prophets, pastors, teachers, and evangelists,—the same order, the same priesthood, the same ordinances, rifts, powers, and blessing, as were enjoyed on the eastern continent; that the people were cut off in consequence of their transgressions; that the last of the prophets who existed among them was commanded to write an abridgment of their prophecies, history, &c., and to hide it up in the earth, and that it should come forth and be united with the Bible." Joseph Smith first made known his discovery of the engraved plates to the members of his own and his father's household. These became his first converts. When the news spread, the prophet says, "My house was frequently beset by mobs and evildesigning persons; several times I was shot at,

Smith always retired behind a screen, whence he dictated the record to "a scribe," named Oliver Cowdrey, who, like himself, had been baptized by an angel, to fit him for the task. After the translation had been completed, the plates were shown to eight witnesses, and "the angel again made his appearance to Joseph; at which time Joseph delivered up the plates into the angel's hands, and he (the angel) has them in his charge to this day." The foregoing is a brief account of the discovery and translation of the "Book of Mormon" according to the of the "Book of Mormon" according to the prophet's own statement; but there is another story told of the authorship; viz., that the volume was founded upon a religious romance, entitled "The Manuscript Found," written by one Solomon Spalding, a Prestyterian teacher. The manuscript of this work is said to have been taken to New York by the preacher's wide or the present according to the present state to New York by the preacher's wide or the present state to New York by the preacher's wide or the present state to the present stat of finding a publisher for it : but by some means it came into the possession of Smith, or an associate of his, named Ugdon. In 1830 the first Mormon church, or, as the founder called it. Mormon church, or, as the founder called it, that of the "Latter-day Saints," was established in the town of Manchester, Ontario county, state of New York. From that time the sect increased with astonishing rapidity, and churches were set up in Ohio, Indiana, Illinois, Pennsylvania, Missouri, and New York. Despite ridicule, persecution, and tarring and feathering, the work went on, until, in 1838, the Mormonites were expelled from Missouri. They settled in Illinois, and in "the fall of 1839" founded the city of Nauvoo (the beautiful), on the banks of the Mississippi. Soon, from a wild tract, the spot became a city of 1500 well-built houses, with more than 15,000 inhabitants. This settlement received large accessions to its numbers, not alone in the shape of converts, who flocked in from foreign countries as well as from other states of America, but also from "gentile" adven-turers, who were attracted to the place by its fertility of soil. And although Joseph Smith, as "seer, prophet, and revelator" of his own city, possessed commanding influence in Nan-voo, he was being constantly embroiled with the civil authorities of the state of Illinois. In 1844 the governor of that state issued a warrant against Joseph Smith, as the instigator of a agains. Joseph Smith, as the insugator of a riot, during which the printing-offices and pre-mises of a "gentile" newspaper were destroyed by the Mormons. The prophet at first made symptoms of resistance, and called out his militia, of which he was lieutenant-colonel; but subsequently offered to surrender if the governor would provide a guard for his society until his trial should take place. He was lodged in Carthage gool under a small guard, selected, it is assumed, from Smith's enemies. A few days afterwards, a mob of turbulent ruffians broke afterwards, a moo of turbulent rumans broke into his prison, fred into the room where he was confined, and killed his brother Hiram, who was incarcerated with him. The prophet endeavoured to effect his secape by the window, but was taken and shot. He remained in the land of classic art between the years 1777-80, and while there became acquainted with Lord Camelford, through whom he subsequently obtained the lucrative appointment of architect to the Bank of England. His earliest practice chiefly con-sisted in designing country mansions; but, after the Bank appointment, other valuable posts were given to him. In 1791 he became clerk of the works to St. James's Palace; in 1795, ar-chitect to the Woods and Forests; and subsequently professor of architecture to the Royal Academy, and surveyor to Chelsea Hospital. He received the order of knighthood in 1831. A large private practice, combined with these lucrative appointments and the fortune he received with his wife, the daughter of a rich city builder, made him a wealthy man. He quarrelled with his son, and refused to be reconciled to him even at the last. The greater part of his wealth was spent upon his house, museum, and library in Lincoin's Inn Fields, which building was, after his death, vested in trustees for the use of the public, who, under certain regulations, are admitted to it without charge. Socrates, sok-ra-tees, a celebrated philosopher of Athens, was the son of a sculptor, in sopher of Athens, was the son of a scarper, in which art he himself attained some proficiency. Crito, observing his genius, and admiring his discourses, called him from this employment to discourses, called him from this employment to the study of philisophy. He also served his country as a soldier, according to his duty as a good citizen, and distinguished himself in seve-ral actions, in which he saved the lives of Xenophon and Alcibiades, with whom he con-tracted a close friendship. On his return to Athens, he presented a remarkable contrast to his contamperation in the oliphones of his descenhis contemporaries in the plainness of his dress and the fragality of his living. In his philosophical lectures he endeavoured to effect a general reformation by recommending virtue. He was followed by a number of illustrious disciples, whom he instructed sometimes in the ernes, whom is mistracted sometimes in the groves of Academus, and at others in the Lyceum, or on the banks of the Ilissus. The independence of his mind, and the powerful eloquence of his discourses, excited against him many enemies, particularly Melitus and Anytus, at whose instigation Aristophanes ridiculed him in his comedy called the "Clouds." Socrates was next accused before the Council of Five was next accept below the Collain of the Hundred, of corrupting the Athenian youth, of introducing innovations in religion, and of ridiculing the gods. Upon these charges he was condemned to death by poison. The celebration of the festival of the Theora staved his execution

After studying philosophy at Athens, he travelled into various countries to increase his knowledge. On his return home, he found his countrymen divided by faction, and the state reduced to a wretched condition. Having composed a poem upon the loss of Salamis, he recited it in the Agora with so much effect that an expedition was organized for the recovery of the place. Of that under-taking, Solon was appointed the chief, and the result proving brilliantly successful, he became the most popular man in the state, and was soon afterwards unanimously elected archon and sovercign legislator. He discharged his high office with great wisdom and integrity, introducing reforms in every department, omeliorating the condition of the poor, and amending the rigorous code of Draco. After completing his legislation, he asked to be allowed to retire from Athens for ten years, which request being acceded to, he went upon a journey into Egypt and Asia Minor. Subsequently to his return, Pisistratus became tyrant of Athens, and Solon, finding that he could not prevent his retaining inding that he could not prevent his retaining absolute power, encouraged him to rule the people with moderation. n. in the island of Scialmis, about 633 n.c.; n. about 559 n.c. The place was, however, taken by the king, after an obstinate defence of a month. Soubise received the royal pardon, but he did not desert the cause of the Reformation; and in 1622, at the head of 8000 men, made himself master of Olonne and threatened Nantes. On being again defeated and proscribed as a rebel, he fied to Rochelle, and afterwards re-paired to England and next to Germany, to implore succours; but failed in both countries. He received the royal pardon in 1622, and re-mained peaceable during three years; but, at the termination of that period, suddenly seized upon the Isle of Rhé, made a dash upon the royal fleet at Blavet, in Brittany, boarded and took the vessels, and cannonaded the fort, by which he was repulsed. He, however, main tained the command of the sea between Nante: and Bordeaux. Proclaimed admiral of the Pro-testant church, he next gave battle to the royal fleet, but was defeated, after a smart engagement; upon which he attacked the royalists at the Isle of Rhé with 3000 men. Again vanquished, he had recourse to flight, and, passing over to England, induced Charles I, to interpose in his behalf. Although Charles obtained his pardon, Soubise remained in England, and soon afterwards sailed with an English fleet, under the command of the duke of Buckingham, for Rochelle, where they were refused admittance.

A second expedition, under Denbigh, the brother-in-law of Buckingham, also failed. Still Soubise persevered; and a third expedition was about to set sail from Portsmouth, when Buckingham, who was to have had the command of it, was assassinated by Felton. The English officers who had seen Soubise and the duke in animated conversation a few hours before, and not being acquainted with the French language, accused the Huguenot leader of the murder. Soubise would probably have been sacrificed to the popular resentment, had not Feiton come forward and admitted the deed. In this situation he remained until 1828, when his drama entitled "Romeo and Juliet" having been successful upon the stage, he was enabled to take his place among the littérateurs of his day. With the production of "Clotilde" his reputation as a dramatist was fixed. He next commenced contributing romances to the French newspapers, and succeeded so well in this new walk. that in a short time he became the most popular romancist of the day. Soon afterwards Soult was met by his great oppouent Wellington, who, passing the Douro, drove the French general from his position, captured nearly all his artillery, and his suite and baggage. Soult made a masterly retreat through Galicia and upon Zamora. He next superseded Marshal Jourdan as major-general of the army of Spain. In 1810 he established himself in the rich province of Andalusia, and, in order to relieve Massena in Portugal, he was commanded by Napoleon to besiege Badajoz, which was taken in the following year. Massena was, nevertheless, compelled to evacuate Portugal, nevertheless, compelled to evacuate rorrogan, after many fruitless attacks upon the strong lines of Torres Vedras. Thus relieved of a formidable opponent, Wellington resolved to retake Badajoz. Soult prepared to relieve the fortress, but was totally defeated at Albuera. But in 1912 Weinigton reappeared before Badajoz, which, after a terrible conflict, was captured by him. Soult was thus compelled to retreat from Seville; the defeat of Marmont at Salamanea, and the surrender of Madril to Wellington, caused Soult to abandon Andalusia, which he had beld during three years. In 1813
he was recalled from the Peninsula by the

most brilliant period of Soult's career, one wherein he displayed consummate skill as a general; but he was overmatched by the Eng-lish commander, who, although Soult defended himself undauntedly wherever he could take up a position, drove the enemy before him, until French territory was entered and Toulouse taken possession of in 1814. After the abdication of Napoleon, Soult attached himself to the Bourbons, and was appointed minister of war; but when Napoleon reappeared in Paris, he again took service under his old master. As quartermaster-general he fought at Waterloo. after which he was banished from France. He was, nevertheless, permitted to return in 1819. Mr. Hill, challain of the Eritish factory at Lisbon, at whose expense Southey had been kept at Oxford, visited Englishment of the Cottage of the Cott land shortly after his nephew's first appearance as a poet, and endeavoured to induce him to enter the Church: but although Southey had by this time become reconciled to her doctrines, he steadily refused to take orders. On his uncle's return to Lisbon, Southey accompanied him, ained in Spain and Portugal

In 1793 he produced "Letters from Spain and Portugal;" and, in the following year, entered himself as a student of the law at Gray's Inn. He wrote to his publisher, "I advance with sufficient rapidity in Blackstone and 'Madoc.' I hope to finish my poem and begin my practice in about two years.' At the end of in practice in about two years." At the end of this time the poem was completed, but the law was given up as impracticable. was given up as impracticable. After a second visit to Lisbon, he obtained, upon his return to England, an appointment as private secretary to the Chancellor of the Exchequer for Ireland; but in six months the poet relinquished what he called "a foolish office and a good salary. This was in 1801, and with this year dates his entrance upon literature as a profession. He obtained sufficient employment from the booksellers, and after making several successful apseries, and after making several successful appearances as an author, he, in 1804, settled at Greta Hall, near Keswick, Gumberland, where the remaining years of his life were passed. In 1807 he received a pension from the government; in 1813 he succeeded Mr. Pye as poet laureate, and under the ministry of Sir Robert Peel, a second pension of £300 per annum was bestowed upon him. He was at the same time officed a baronetcy by Sir Robert; but this Southey declined, because too poor to support the dignity. He lost his first wife in 1837, and two years later was united to Miss Caroline Bowles, the poetess. He was the author of more than 100 volumes of poetry, history, travels, &c.; and, moreover, produced 126 papers of various lengths, upon history, hiography, politics, and general literature. STIEL, Anne Germaine de, stat-zl, a celebrated French authoress, was the daughter of Neeker, minister of innane under Louis XVI. After receiving a most careful education, she applied herself to literary composition, and produced several plays and takes; but the first of her works which attracted notice was her "Lotters upon the Writings and Character of Roussean." This appeared in 1778, previously to which she had become the wife of the report of the Baron de Staël-Holstein, the Swedish ambassador, a nobleman very much older than herself. Upon the outburst of the revolution, her parents retired from France; but, as the wife of the representative of a friendly power, she was allowed to remain. Her sympathies were at the outset entirely with the revolution. The sufferings of the royal family, however, awoke in her breast a horer of the abuses which were obeing perpetrated under the name of liberty. She was even courageous enough to print a defence of Marie Antohetts, under the

In 1510 appeared at Paris, although she herself was delarred therefrom her celebrated work entitled "De l'Alle-manne." In this production she portraved the habits, literature, and p-ditiend tendencies of the Garman people. Immediately after publication, 10,000 copies of the book were seized by catton, 10,000 copies of the most were seased by Napoleon's minister of police. Madame do Staci, from her retreat at Coppet, on the banks of the Luke of Geneva, protested against this net. The minister of police answered: "Your last work is not French, and I have stopped its publication. Your exist is an attract consequence of your constant behaviour for years past. Sar Featured to Fars apont the abdication of Napoleon, in 1814, and was allowed to remain, even after the emperor's re-turn from Eiba. At the restoration of the Bourbons, she retired to Switzerland, and never again interfered with politics. Subsequently to the death of the Baron de Staël, she privately married M. Rocca. In her retirement she occupied herself with the composition of her famous work, entitled "Considerations sur la Révolu-tion Française." In this work, which did not appear until after her demise, she gives a graphic account of the stormy period when France was torn by faction and delivered over to republican fury. Her political associate, Benjamin Con-stant, says: "If she had painted individuals more frequently and more in detail, her work, though it might have ranked lower as a literary composition, would have gained in interest."

Nevertheless the work contains some admirable Averetneses, ne work contains some admirable sketches of Mirabeu, Calonio, Brienne, Petion, and other leaders of party, with whom she had come into contact. She also produced essays on "Buiciae," and on "Fiction." Altogether, she was one of the most remarkable presonages of a remarkable age. E. at Paris, 1706; D. in Switzerland,

STAFFOED, staff-ford, an ancient English family, originally from Normandy, the founder of which was Robert Tani, contemporary and follower of William the Conqueror, who created him governor of the castle of Stafford. Several members of this family have played a great part in English history, particularly Humphrey general of Hunry VL, who fought against the

duke of York, and, for his services, was recom-pensed with the dukedom of Buckingham in veries, the chief being his theory of phlogiston, 1345. Henry, his grandson, succeeded him in which, although erroneous in itself, led to the dukedom; and was for some time the discovery of great truths in chemistry. He duke of fork, and, for his services, was recom-pensed with the dukedom of Buckingham in 14:5. Henry, his grandson, succeeded him in the dukedom; and was for some time the the dukedom; and was for some time the favourite of Richard III., whom he seconded in his ambitious schemes; but having revolted against the king, he was, on being captured, decapitated in 1493. His son Edward was charged with treuson under Henry VIII., and also perished upon the scaffold in 1821. This also perished upon the scaffold in 1521. This house having become extinct in the male line, its honours were continued through William Howard, who married Mary, the heiress of the Staffords.

STAFFORD, William Howard, Viscount, an English nobleman, who is chiefly remarkable in history as the last victim to the Titus Oates plot. He was a Roman Catholic, and had been a stanch adherent to the fortunes of Charles I.; but, according to Burnet, "he thought the king had not rewarded him for his former services as he had deserved; so he often voted against the court, and made great applications always to the Earl of Shaftesbury. He was on no good terms with the Duke of York." Titus Commons, as one who had been nominated by the general of the order of Jesuits to the office of paymaster of the forces. Two days after-wards Stafford surrendered himself, and several warus stanous astrendered imment, and several months later was tried and found guilty, by a majority of the House of Lords, of having, among other crimes, offered rewards to several persons to kill the king. He protested his in-nocence, both at his trial and subsequently. On the morning before his death he "denied," says Burnet, "all that the witnesses had sworn against him." A bill to reverse his attainder against him. A bill to reverse his attained passed the Lords in 1685, but was thrown out in the House of Commons. His widow was, however, created Countess of Stafford for life by James II.: the viscount's attainder was not reversed till 1824. In the succeeding year, Sir George Jerningham, havding proved his claim through his descent from the granddaughter of the viscount, was granted the barony. B. 1612; executed 1680.

STAGNELUS, Etc. John, stag-ne-li-us, a poct, and surnamed the Swedish Shelley. He evinced a genius for poetry from a very early age, and shortly after the termination of his career at college, produced his first work, "Vladi-mir the Great," an epic poem, the subject of which was the conversion of the Russians to Christianity. He held an appointment in the department of Ecclesiastical Affairs of Sweden, and throughout his life continued to produce poems, which are held to surpass all other productions of the same kind in the Swedish language. After his death, his works were col-lected into three volumes. A complete German translation of his poems appeared in 1851. An English translation of a few of his lyrics was given in the "Foreign Review." B. 1793; D. 1823.

STAHL, George Ernest, stal, a celebrated German chemist, was educated at Jena, where he took his doctor's degree in 1683; but, upon the establishment of the university of Halle, in 1684, he was appointed professor of anatomy and chemistry there. Acquiring great reputa-tion in this office, he was, in 1716, invited to Berlin, and made counsellor of the court and composed a number of learned works in Latin, composed a number of learned works in Latin, upon medical science, and upon themistry, this phlogistic theory, which held its ground fornearly a century, was developed in a workentitled "Zymotechnia Fundamentalia". n. at Anspach, 1660; p. at Berlin, 1734.

He served under Mariborough in 1702; represented the English nation at the court of Poland during English nation as the court of Foranc during the the interval 1709-18, and in France during the regency. He induced the regent Orleans to expel the Pretender from French territory, and in the reign of George II. became grandadmiral of Scotland, and was made a field-marshal. He was nominated to the command of the English forces in Germany, and gained over Marshal the duke de Noailles the battle of Dettingen, in 1743. B. at Edinburgh, 1673: D. 1747.

STANFIELD, Clarkson, stan'-feeld, an eminent modern English painter, who first studied marine effects, in depicting which he subsequently became so skilful, from the forecastle of an English man-of-war. Curiously enough, he was a seaman on board the vessel in which Douglas Jerrold served as a midshipman. Dougnas Jerroid served as a midshipman. Abandoning the nary, he became a seen-paluter at the old Royalty Theatre, near Well-loos Square, in London, at that period a popular resort of English sailors. Becoming eminent as a seen-paluter, be was engaged for Drury-lane Theatre. During many years he worked hard for the stage, but found time to paint small pictures of coast-scenery and shipping, and in the latter walk achieved so high a reputation that in 1832 he was elected an associate of the Royal Academy. Three years later, he became R.A., by which time he had entirely withdrawn himself from theatrical work, From this period he was one of the most brilliant and popular contributors to the yearly exhibitions of the Royal Academy. True to nature, manly in style, and a thorough master of the technicalities of his art, he was one of the greatest ornaments of the English school of landscape painters. Several of his pictures—far from being the best, however—are included in the British collection at the South Kensington Museum. Perhaps his finest productions are, "The Victory, bearing the Body of Nelson, towed into Gibraltar, seven days after the Battle of Trafalgar;" "The Abandoned;" "Port-naspana, noar the Giant's Causeway, with the Wrecked Vessels of the Spanish Armada," and "St. Sebastian during the Siege under the Duke of Wellington." In 1705 he served as a brigadier-general under the earl of Peterborough at the siege of Barcelona. He was afterwards made major-general and commander-in-chief of the British forces in Spain by Queen Anne. In 1708 he captured Port Mahon, and obtained possession of the island of Minorea; subsequently gaining the victories of Minorca; subsequently gaining the victorus of Almanza and Saragossa; but, being intrusted with the defence of Brihnega, was obliged to surrender it, after a gallant resistance, to the duke de Vendome. George I, appointed him secretary of state, and in 1714 sent him as ambassador to Yienna. She had a large pension from the English govern-ment, and for many years was possessed of considerable influence over the Turkish pachas, which, however, when habitual carelessness in money matters had deprived her of the means of bribing them, she so entirely lost as to be in actual danger of her life. Of her manner of living as well as her way of thinking, some notion is conveyed by her reply to an English traveller, who advised her to quit her perilous and deso-late abode, and return to England: "As to leaving this country," said her ladyship, your advice is in vain: I will never return to Engadvice is in vain: I will nover return to Eng-land. STEPHEN I. Pope, ascended the pontifical chair after Lucius, in 253. He had a difference with St. Cyprian and Firmilian about rebabtizing repentant heretics, which practice this pope condemned. p. 257.

STEPHEN II., elected in 752, died three days

after his election.

STEPHEN III. was a native of Rome, and elected pope in 752. Astolphus, king of the Lombards, having menaced the city of Rome, Stephen implored the aid of Constantine Copronymus, emperor of the East; but he, being engaged in a war, recommended the pope's cause to Pepin, king of the Franks, who marched into Italy, and deprived Astolphus of the exarchate of Ravenna and several cities, which he gave to the pope, thus founding the temporal sove-reignty of the church of Rome. D. 757. STEPHEN IV. succeeded Paul I. in 768.

Throughout his career he was at variance with the Lombards, and threatened to excommunicate Charles (afterwards Charlemagne) and Carloman, sons of Pepin, if they entered into m alliance with them, or internaried with the daughters of the Lombard king. Charles, however, married Hermengarda, daughter of Desi-derius, king of the Lombards, but put her away a year afterwards. Stephen was succeeded by Adrian I. D. 772. Stephen V. succeeded Leo III. in 816, but

died in the same year.

STEPHEN VI. was elected in succession to Adrian III. in 885. He was a learned pontiff, and greatly contributed to relieve the people of Rome from the effects of a terrible famine which had desolated the country shortly before

His accession. p. 891.
STEPHEN VII. became pope in succession to Benedict VI. in 898. He caused the body of Pope Formosus to be disinterred and cast into an ordinary grave, on the plea that the pope had been excommunicated by John VII, an-terior to his elevation to the tiara. In 897 the partisans of Formosus burst into an insurrection, and, having seized Stephen, strangled him.

STEPHEN VIII, was the successor of Leo VI., and was elevated to the papacy in 929. There are no reliable records of his pontificate. D. 930. STEPHEN IX, was the successor of Leo VII.

At the time of his election, 939, Rome was governed by Alberic, son of Marozia (see Ma-BOZIA), who styled himself "prince and senator of all the Romans." The records of the papacy are extremely untrustworthy; but it is stated by one authority that Stephen IX, was, during

ple for life. His successor was Martin III. Stephen p. 943.

STEPHEN X. was elected to the papacy in succession to Victor II, in 1957. He had previously fulfilled the office of papal legate at the court of Constantinople. After his elevation, he dispatched legates to Milan, to enforce cell-bacy among the clergy of that church, the disputes upon which decree lasted during a quarter of a century. He summoned the learned Petrus Damianus from his monastery, and created him cardinal and bishop of Ostia. It is surmised from several passages in his letters, that he introm several passages in instetters, that he mi-tended to crown his brother, Godfrey duke of Tuscany, king of Italy. According to one of the bulls issued by him, the clergy were ex-empted from the jurisdiction of lay courts, as also from the payment of tribute to laymen. He was a learned and energetic pontiff, but too ambitious of worldly influence. D. 105s.

STEPHEN II., king of Hungary, succeeded his father Koloman in 1114. He invaded Poland and Austria, and marched into Russia, but was unsuccessful everywhere. He abdicated in 1131, and retired to a monastery, where he died in the same year.

Stephen III, was crowned king of Hungary in 1161, but was almost immediately deposed by the nobles. He regained the crown, how-

over, in 1165, and reigned till 1173.

Siffic IV. ascended the throne in 1161, but was defeated by the preceding in 1163, soon after which he died at Semlin.

STEPHEN V. reigned two years, 1270-72.
STEPHEN, king of England, was the third son of Stephen, earl of Blois, by Adela, daughter of William the Conqueror, and was crowned at Westminster in 1135. Matilda, daughter of Henry I., and wife of Henry IV., emperor of Germany, was the legitimate heir to the throne; but Stephen, taking advantage of her absence, obtained possession of it. In 1139 Matilda landed in England, and in 1141 took Stephen prisoner at the battle of Lincoln; but he was exchanged the same year for Robert, earl of Gloucester, illegitimate brother of the empress. Matilda, after many unsuccessful engagements, Matilda, after many unsuccessful engagements, quitted the kingdom in 1147, and, two years subsequently, her son Henry, by Geoffrey Plantagenet, earl of Anjou, claimed the crown; but in 1188 a peace was concluded between the rivals, by which it was settled that Stephen should enjoy the crown for life, and that Henry should be his successor. This second campaign was, however, brought to a seadden termination by the death of Bathori. He was not only a successful soldier, but a wise and provident administrator, as was evinced by the great number of improvements which he introduced into the civil government of Poland. A liberal patron of learning, he founded the university of Wilna and the college of Polotzk.

Sperminson, George, 467-fin-son, a distin-guished English mechanician and the inventor of the locomotive, was the son of a fireman STEPHENS, James Francis, an eminent Eng-

of the locomotive, was the son of a fireman at a colliery, and while still a child was em-ployed to herd cows. Even at that early age his genius for mechanical invention was foreshadowed in the amusements which he sought; it being his habit to sit in a bog modelling clay engines and constructing miniature windmills. In his fourteenth year he was appointed assistant fireman to his father. In another year he rose to be fireman. Constantly taking advantage of every spare moment to increase his knowledge of the machinery used in a colliery,

he made so much progress, that by the time he which he made of a more level and substantial had attained his seventeenth year, he had risen character. His object had hitherto been merely to the post of plugman. He had now the to provide a good tramroad, with an efficient engine under his charge; it being his duty to keep it in proper working condition. Resolved to master every detail of its construction, he would frequently take the engine to pieces, in order to become acquainted with the working of all its parts. He was in receipt of the (to of an its parts. He was in receipt of the (to him large) sum of twelve shillings per week, and he formed the resolution to acquire some education. At a night-school at Walbottle, he learnt to read and write, and in 1799 paid fourpence per week to a Scotchman, at Newburn, to teach him arithmetic. In his twentieth year he married, and was uppointed brakesman to an engine used in lifting the ballast brought by the collier ships on their return voyage to Newcastle. At this time he added to his income by devoting his leisure to boot-mending, cutting out the pitmen's clothes, and clock-cleaning; but, with all this, he found time for his experiments in mechanics. In 1803 his son Robert was born; soon after which, his wife died. In 1804 he proceeded to Montrose, having been appointed to superintend one of Messrs. Boulton and Watt's engines there. He remained in Scotland about a year; upon which he returned to his former employment at Killingworth. In 1812 be was appointed engineer of the colliery, at a salary of £100 per annum. This, the first great step in his career, was the result of the assiduous application he had bestowed upon a mastery of the principles of mechanism, by which he had been enabled to suggest many which he had been enabled to suggest many improvements in machinery to his employers. The turning-point of his career was now at hand. The construction of a locomotive engine hand. The construction of a locomotive engine had long been a favourite problem with engineers connected with colliery labour. Several travelling engines had, indeed, been constructed, but they were at best only clamsy and,
infificion bisecs of machinery. To this great
task Stephenson now bent his mind, and
brought to beat upon his sell-imposed undertaking all those stores of mechanical knowledge with which, under the most disadvantageous circumstances, he had collected. He inspected all the locomotives within his reach, and at length informed one of his employers, Lord Ravensinformed one of his employers, Lord Ravens-worth, that he could make a better engine for the colliery tramways than any yet seen. He was provided with the means of executing his design, and in less than a year completed a travelling engine which drew along the colliery tramroad eight loaded carriages, weighing thirty tons, at a rate of four miles an hour. This successful trial took place in 1814. The engine was, nevertheless, but an imperfect and cumbrous affair, although no one saw its defects save George Stephenson himself. In the following year he constructed another engine, which was a vast improvement upon its predecessor. He next invented a safety-lamp, which, upon completion, proved to be in principle similar to that produced at the same period similar to that produced at the same period by Sir Humphry Davy. A controversy was raised as to who was, in reality, the inventor; but, after a full review of all the facts, it would appear that both Sir Humphry Davy and Ste-phenson had produced a lamp identical in principle, but totally independent of each other. Stephenson went on adding improvement after

and economical substitute for horse-power, in the shape of a travelling engine to work upon it, for the conveyance of the coal from the pit's mouth to the Tyne-side. But the time was fast approaching when his improved tramroads and his travelling engine (soon to be named the his travelling engine (soon to be named the Locomotive) were to play a still more important part. In 1820, Mr. Pease, of Darlington, obtained an act of Parliament for the construction of a railway to be worked "with men and horses or otherwise." Meanwhile, Stephenson had converted the tramroad of the Hetton Colley into a railway eight miles in extent. This fact recommended him to the notice of Mr. Pease, who caused him to be engaged as the engineer of the new undertaking, which, under the name of the Stockton and Darlington Bailthe name of the Stockton and Darlington Railway, was finished in 1825. About the same time, Stephenson was engaged to make a survey for a proposed railway or tramroad be-tween Manchester and Liverpool. In Parliaent the most absurd objections to the scheme were raised; and even when the act was passed, the persons employed in making the survey had literally to fight for permission to do so. Nothing less than genius of the highest order, combined with indomitable perseverance, could have triumphed over the difficulties which presented themselves to George Stephenson in the construction of the railway between Liver-pool and Manchester. He had to make a firm bed for his locomotives and passenger-carriages through Chat Moss, a spongy bog; he had to overcome the supineness of directors—to prevail upon them to at least make a trial of the locomotive before they decided upon employing horse-traction, as most of them were inclined to do. He had to invent the whole system of railway labour,—its signals, "navvies," rails, stations, and locomotives. The entire scheme was at first regarded as a subject only fit to be ridiculed, by some of the most eminent scientific men in England. Very few of the regularly-educated civil engineers had any faith in the project. In point of fact, this, the first railway of any importance ever constructed, was a gigantic innovation, and none but a powerful and original minded genius, such as the selfeducated colliery fireman was, could have carried it to completion. In the progress of this work, George Stephenson availed himself of the valuable services of his son Robert, whom he had caused to be carefully and thoroughly educated as a civil engineer. Some years antecedent to the completion of the Manchester and Liverpool line of railway, he had, with great foresight, set up a factory for the construction of locomotives; and when the demand for these engines was created, it was found that from his establishment alone could anything like a per-fect machine be obtained. The company had offered a prize of £500 for a locomotive engine to be used on the new line. By the specified time, several engines were put forward; but all broke down upon their first trial, except the "Rocket," which had been turned out from Acceptage which had been turned out from Stephenson's factory. It must, however, be admitted that the success of this locomotive was mainly owing to its "multitubular boller," which had been suggested by Mr. Henry Booth, and manufactured under the personal improvement to his travelling engine, and also Booth, and manufactured under the personal bestowed great attention upon the tramroad, superintendence of the younger Stephenson, 979

Manchester line was opened; and from that moment George Stephenson was acknowledged as one of the most distinguished men of his time. Lines of railway were projected throughout the kingdom, and Stephenson was throughout the kingdom, and Stephenson was appointed chief engineer of some of the most important. For a long time he enjoyed the monopoly of locomotive-making; and it was not until skilled workmen, trained in his factory, had been called away to form or superintend other orthologous and the contraction of the contr had been called away to form or superintend other establishments, that a good engine could be obtained in any other quarter. He was also engaged upon some foreign lines, principally in Belgium. He went to Spain to make the survey of a proposed line between Madrid and the Prenees; but the scheme was subsequently shandomed. In 1845 he relinquished nearly all his engagements with ratiway companies, and devoted his attention to the colleries and line-works of which he had the conteries and nine-works to which in ammoded become the proprietor, his leisure being amused with his farm and gardens. It was in these occupations that the great English engines spent the few years which were left to him after quitting that career of high-minded industry in which he won fame and fortune for himself, and conferred a lasting boon on man-B. at Wylam, Northumberland, 1781; D. 1848.

Under that gentleman, Robert obtained a complete knowledge of the machinery used in a colliery; in 1820 he repaired for a session to the university of Edinburgh, where he attended the lectures of Sir John Leslie and Professor the fectures of oir John Lesine and Professor Jamieson upon natural philosophy, geology, and mineralogy. During his stay there he gained a mathematical prize; and, after returning home, was apprentised to his father, who had just commenced his locomotive factory at Newcastle. In consequence of his health having become delicate, he in 1824 went out to South America upon a commission to examine the gold and silver mines of that country. George Stephenson, on being appointed engineer to the Liver-pool and Manchester Railway, recalled his son, who reached England at the close of 1827. He He then became one of the chief assistants to his father, and after rendering him material services, he, upon the completion of the Liverpool line, was engaged to form a branch of the same, near Warrington. He next made the survey for the Leicester and Swannington Railway, and afterwards of the London and Bir-mingham line, of which he was subsequently appointed engineer. Employment of the high-

STRICKLAND, Miss Agnes, a distinguished modern English historical writer, who commenced her literary labours at an early age. One of her first productions was a small volume of patriotic lyrics, a few of which were contri-buted by her sister. Susanna Strickland. Several collections of poems, most of them composed in imitation of Lord Byron and Sir Walter Scott, followed. "Tales and Stories from History," the "Pilgrims of Walsingham; or, Tales of the Middle Ages," and a number of similar produc-tions, all of which were in prose, were her next ventures. In 1842 she took a higher flight, and gave to the public the "Letters of Mary Queen gave to the public the "Letters of Mary Queen of Scots," published from the originals, with historical introductions and notes. In one of her first poetical pieces she had treated of the escape of Mary Beatrice, wife of James II, which "touching mediant," who observed, "first suggested the lides that the lives of the queens of Poetics had been the treatment of the present the suggested the dee that the lives of the queens of England would be found replete with seenes of more powerful interest than any work of fiction that could be offered to the world." STROZZI, strof-se, an ancient and distinguished Florentine family, mention of which in history is first made in the 14th century. The most celebrated members of the Strozzi family were:—

STROZZI, Palla, who was at first the colleague of Cosmo de' Medici, at the congress of Ferrara, in 1432, when a treaty of peace was signed between Florence and Venice on the one side, and the duke of Milan on the other. He subsequently joined the Albizzi against the Medici family. This league was successful at the outset; but, when the Medici regained their former influence at Florence, Palla retired to Padua, where he spent the remainder of his life in studious retirement. He translated the works of John Chrysostom from the Greek into the Latin, D. at Padua, 1462.

STROZZI, Filippo, was a prominent actor in the events which took place at the fall of the Florentine republic. Possessed of great wealth, he was allied to the great Medici family, having espoused Clarice, daughter of Piero, and niece of Leo X. Two illegitimate members of nieco of Leo X. Two illegitimate members of the Médici family, Alessandro and Cardinal Ippolite, were at the time ruling in Florence; and against these unworthy scions of a great bouse, Filippo, instigated by his wife, excited a revolt in 1827. The movement was successful, and the two Medici were reduced to the condition of private citizens. The Florentine emigrant nobles now resolved to make a desperate attempt to sweep away this new ruler. At the head of 4000 French and Italian mercenaries, Filippo and other leaders invaded Florentine territory, and made themselves masters of the castle of Montemurlo. They were, however, soon afterwards defeated by the troops of Cosmo and the Spanish deteated by the troops of Cosmo and the spanish soldiers of the emperor. Filippo was taken prisoner, and after being kept in confinement during a year, and subjected to the torture, he was about to be delivered by his Spanish captors to the tender mercies of Cosmo, when, in 1538, he found means to cut his own throat with a sword. He was a learned and accomplished nobleman. He translated some apophthegms nobleman. He translated some apophthegms of Plutarch, and thetreatise of Polybius, entitled "On the Mode of Forming Encampments." After his death, the emperor Charles V. combinescated all the funds which he had lodged in banking-houses in Italy Germany, and Spain; nevertheless, he left to his children, principally

in the bank of France, an income of 50,000 crowns. (See "Life of Filippo Strozzi," by Thomas Adolphus Trollope.) STROZZI, Piero, was the son of the preceding, and was with him in the attempt made against Cosmo in 1537; but succeeded in effecting his escape to France, where he became the favourite of Henry II. and Catherine de' Medici, and was sent in command of an auxiliary French force to Siena, then at war with Cosmo, duke of Florence. Being defeated, however, he retired to Rome, which he bravely held against the to Home, which he bravely helia against the duke of Alva, who had been sent to attack it by Philip II, in 1558, until the arrival of the duke of Guise, with a French force, compelled the Spanish commander to withdraw to Naples. In 1658 he was with the duke of Guise when the English lost Calais; but was killed at Thiontille in the same year.—His son Filippo distinguished himself in the service of Prance. and was, in 1587, sent in command of the expedition to the Azores, to support Don Antonio, who claimed the crown of Portugal, against Philip II. of Spain. STUART, Arabella, or Arbella, usually styled the Lady Arabella, was the daughter of Charles Stuart, duke of Lennox, younger brother of Henry, Lord Darnley, husband of Mary Queen of Scots, the father of James I. Her mother was the daughter of Sir William Cavendish, of Chatsworth, Derbyshire, father of the first earl of Devonshire. As great-grandchild of Henry VIII.'s sister Margaret, she stood in the same relationship to Queen Elizabeth as did James Stuart of Scotland, afterwards James I. This affinity to the English throne was the cause of all her misfortunes. In 1603 it was alleged that a plot had been formed to place the crown upon her head, under the protection of Spain, for which Sir Walter Raleigh was tried. There is no proof that such a design was ever enter-tained, and certainly none that the Lady Arabella knew of it. James I. was strongly opposed to her marriage with any personage, royal, noble, or otherwise. In 1610, however, was discovered that she was married to William Seymour, grandson of the earl of Hertford. Seymour was at once committed to the Tower, whence, after a confinement of a year, he effected his escape. The Lady Arabella also eluded the vigilance of her keepers, and fled towards France; but was taken in Calais roads, and imprisoned in the Tower, where, in 1615, she died, her sufferings having previously deprived her of reason. He was major of the 43rd regiment in 1775, and accompanied his corps to America, and, obtaining the command of a bet-talion of grenadiers, served with distinction through the greater part of the war. Having attained the rank of major-general in 1793, he attained the rank of major-general in 1793, he was, in 1794, appointed to command the troops serving in Corsica, where he captured Calvi, and thus expelled the French from the island. He was sent in 1797 with a corps of 8000 men to Portugal, to assist in the defence of that country against the threatened attack of the French; and not only contributed to the immediate safety of the Lusitanian territory, but by making himself thoroughly acquainted with the topography of the country, supplied information which was of essential service to the duke of Wellington at a subsequent period. In 1798, General Stuart succeeded in obtaining the surrender of Minorca, which he had been sent to attack; and for this service was made lieutenant-general and a knight of the Bath. He shortly afterwards took possession of Messina, on the retreat of the Neapolitan royal family to Sicily on the con-quest of Naples by the French; and in 1800 quest of Naples by the French; and in 1800 was made commander of the forces in the Mediterranean. On being ordered, however, to give up Malia to Russia, and his remonstrances against the step being disregarded, he resigned the command, though his views were subsequently adopted by the government. brated French general and marshal, who, at the outburst of the Revolution, joined the army as a volunteer of the cavalry of Lyons. He distinguished himself at the siege of Toulon in 1793, and again in 1795, at Loane, in Italy, where he captured three Austrian standards, and under Massena he was created a chef de brigade. Having exhibited great ability as a tactician while acting as chief of General Joubert's staff in Italy, he attracted the favourable notice of General Bonaparte, who promoted him to be Massena's second in command. He gave emi-nent proofs of his ability soon afterwards, when, in 1800, he first kept in check, and next cut off the retreat of the Austrian general Melas, who had 40,000 men under his command, Suchet's troops numbering only 8000. By the brilliant manceuvres he executed upon this occasion, he rendered the greatest assistance to Bonaparte, who, with the main body of the French army, was crossing the Great St. Bernard. After the battle of Marengo, at which he was present, he was intrusted with the government of Genoa. He next commanded the centre of the Army of He next commanded the center of the Amy of tally. In 1808 he was placed in command of a division under Marshal Lannes, and it was to his skilful dispositions that the memorable victory at Austerlitz was due. reputation was now so high, that Napoleon gave him the command of the fifth division of the Army of Spain, advanced him to the highest grade of the Legion of Honour, granted him a pension of 20,000 francs, and created him a count of the empire. His Spanish campaign count of the empire. His Spanish campaign forms the most brilliant era in his career. Napier, in his "History of the Peninsular War," declares that "Suchet was no ordinary man; and with equal vigour and prudence he commenced a system of discipline in his corps, and of order in his government, that afterwards carried him, with scarcely a check, from one success to another, until he obtained the rank of marshal for himself and the honour for his corps of being the only one in Spain that never suffered any signal reverse." In rapid successuffered any signal reverse." In rapid succession he defeated each Spanish general that opposed him, and made himself master of the fortresses of Lerdia, Mcquinenza, Tortosa, and the city of Tarragona, which was defended by 18,000 Spaniards, 6000 of whom are stated to have fallen. Mont-Serrat, hitherto considered impregnable, was next taken. For these great achievements Suchet was created a marshal of the emuire in 1811. In the same vere he as. achievements suchet was created a marsina of the empire in 1811. In the same year he de-feated the Spanish general Blake, and 30,000 men, under the walls of Murviedro; Valencia capitulated to him in 1812, and he soon became master of the whole province of that name. Napoleon marked his sense of the brilliant services performed by his lieutenant by creating him duke of Albufera. Unlike some of the other French generals, he ruled both in Valencia and Aragon with humanity and justice. Lord Wellington's successes compelled Suchet, after the battle of Vittoria, to retreat upon Catalonia, and afterwards to entirely evacuate Spanish ter-ritory. He conducted his retreat in an orderly manner; and, on reaching Narbonne in 1814, gave in his adhesion to the new order of things. While Louis XVIII. remained upon the throne, Suchet held the command of the tenth corps; but after the return of Napoleon from Elba, he again took service under his old chief. He commanded the Army of the Alps, numbering 10,000 men; and, on being compelled to retreat at the approach of 100,000 Austrians, he occupied Lyons; on the subsequent surrender of which city he obtained honourable terms. At the restoration of Louis XVIII. he was for a the restoration of nouis Aviai. He was not a time in disgrace; but in 1819 was reinstated in all his honours, civil and military. The re-maining years of his life were spent in com-posing his "Memoirs," which were published in 1826. Suchet deservedly takes rank among the best of Napoleon's generals. Napoleon, on being asked whom he considered the first of his officers, replied,—"I think Suchet is probably the first; Massena was, but you may say that he is dead." In 1820 he was appointed canon of Darham, and eight years later, being then just forty-eight years of age, he became bishop of Chester. In this post Dr. Sumner remained till 1848, when, on the death of Dr. Howley, he was raised to the archiepiscopal chair of Canterbury, an appointment which, from the new primate being comparatively a little-known man in connexion with ecclesiastical affairs, excited some surprise. The appointment, however, was fully justified by the judicious and conciliatory course pursued by the archbishop. Besides the work already mentioned, areausana, Besuces the work arready mentioned, Dr. Summer at various times published the following:—"Apostolic Preaching Considered," "Charges at Chester," "Evidences of Christianity," "Expository Lectures," in nine volumes: "Four Sermons on the Christian Ministry," "Sermons on the Christian Ministry," "Sermons on the Christian Faith," "Sermons on the Festivale", "All Services of the Christian Faith," "Sermons on the Festivale", "All Services of Services of

SUNDERLAND, Henry Spencer, first Earl of, sun-der-land, an English nobleman, who distinguished himself in defending the cause of Charles I. against the Parliament. Before he had attained his majority, he married the beautiful Dorothy Sidney, sister of Algernon Sidney, and the Saccharissa of the poet Waller. At the outbreak of the civil war, he joined the king's standard. He, however, had no real symstandard. pathy with the royal cause, and declared, in a letter to his wife. "If there could be an expellent found to save the punctillo of honour, I would not remain here an hour." In 1613 he was created carl of Sunderland by Charles I., in reward, it is asserted, of having helped that monarch with a loan of £15,000. He fell in the first hattle of Newbury. Clarendon, the royalist historian, thus speaks of him: "He was a lord of great fortune, tender years (being not above three-and-twenty years of age), and an early judgment, who, having no command in the army, attended upon the king's person, under the obligation of honour; and putting himself that day in the king's troop, as volunteer, before they came to charge, was taken away by a cannon-bullet." p. 1620; killed, 1643.
Sunderlind, Robert Spencer, Earl of, an English statesman, was the son of the pre-

ceding, and commenced his public career in 1871, on being appointed ambassador to Spain. He subsequently fulfilled the same functions at the court of France, and afterwards became secretary of state for foreign affairs. Under the reign of James II. he rose to the height of power as president of the council and prime minister, and, in order to retain the king's favour, became a Roman Catholic, or, at least, put on the semblance of it. Accordingly, he became so unpopular with the nation, that James was compelled to dismiss him; a change which, it is said, "pleased all men; but it came too late." Althorp, 1702. Surrey, Thomas Howard, Earl of, sur'-re. a gallant English nobleman, who served with his brother, Sir Edward Howard, against Sir Andrew Barton, a Scotch pirate, who infested the English coast in 1511. After the defeat and death of Barton, Surrey accompanied the marquis of Dorset in his expedition to Guienne, which ended in the conquest of Navarre by Ferdinand. On the death of his brother, Sir Edward, he was made high-admiral of England, and effectually cleared the Channel of the French cruisers. The victory of Flodden-field, in which the king of Scotland was slain, was chiefly owing to his bravery. For these services his father was re-stored to the title of duke of Norfolk, and himstored to the title of duke of Noriola, and him-self created earl of Surrey. On the breaking out of the disturbances in Ireland, he was ap-pointed lieutenant of that kingdom, where he suppressed the rebellion. After serving there two years, he returned, and had the command of the fleet against France. He succeeded to the title of duke of Norfolk on the death of his father in 1524. Notwithstanding his great services, Henry, at the close of life. greus serveces, Henry, as the cusse of life, caused the duke to be sent to the Tower on a charge of treason, and his son to be beheaded in his presence. Surary, Henry Howard, Earl of, an accom-

plished English nobleman and poet, son of the preceding, was at first, while his friend the duke of Richmond, natural son of Henry VIII., was alive, a favourite at court; but after serving his country with great valour, he fell a victim to the jealousy of Henry VIII., who pretended to suspect him of treasonable designs against himself. He and his father were sent to the numser. He and his latter were sent to the Tower, and the son beheaded on Tower-hill, in 1547. He wrote some excellent poems, and made a beautiful translation of a portion of the ""Engila." He is the first English writer of blank verse.

subordinate grades, became a colonel in 1762. He displayed the greatest bravery when serving under Romanzoff against the Turks, and having slain several janissaries with his own hand, he put their heads into a sack, which he laid at the feet of his ceneral. In 1783 he compelled the Tartars of Kuban and Budziak to submit and swear allegiance to the empress; for which he was named general-in-chief. In 1757 he defeated the Turks at Oczakow, which place was taken by storm. In 1750 he attacked the Mussulmans with a very inferior force, and defeated them, near the river Rymnik, for which he was created a count of the Ruman empire, and obtained the surname of Bymnikski. By this victory he saved the Prince of Saxe-Coburg and the Imperial army. In the following year he stormed Ismail, wherein above 30.000 Turks were either killed or wounded, and 10,000 taken prisoners. Always laconic, he announced his success to the empress as follows: "Praise be to God, and praise be to you; the fortress is taken, and I am in it." Indeed, he was wont taken, and I am in it." Indeed, he was wont to observe that the pen was not a fit instrument for a soldier. In December, 1701, penæ was concluded, and Suwaroff was loaded with honours. His talents were again called into action in the war of Poland, when he took Prague, where 20,000 Poles fell on the field of battle. This was followed by the fall of Warsaw, and the partition of Poland. For these services he was made field-marshal, and obtained the grant of a large estate. When the emperor Paul entered into the war against France, in 1799, Suwaroff had the command of the army, with which he marched into Italy, where he was opposed by Moreau. Over-powered by numbers, the Russian hero effected a most brilliant retreat over the mountains of Switzerland, and, entering Germany, marched to Russia by order of his sovereign. For his services in this campaign, he was created a prince by the title of Italinsky. He was, however, treated by Paul with great ingratitude, which is supposed to have deeply affected his spirit. He was held in the greatest respect by his soldiers, and, although he showed himself a brilliant tactician, he used to say that the whole of his system was comprised in the words, "Advance and strike." He was one of the few generals who never lost a battle. B land, 1730; p. at St. Petersburg, 1800. B. in Fin-

Swirt, Jonathan, swift, a celebrated divine and writer. His father, who held the appoint-ment of steward of the King's Inns, Dublin, died a few months before the birth of Jonathan, leaving his widow in narrow circumstances. At the age of 6 years the child was sent to Kilkenny school, whence, in 1682, he was re-moved to the university of Dublin, the expense of his education being defraved by his uncle. While at college, he paid more attention to history and poerry than to logic and the classics; so that he was denied his degree on his first application, and obtained it with difficulty on the second. At the death of his uncle, in 1698, the second. At the death of his uncle, in 1688, he went to England, where he was hospitably entertained by Sir William Temple, who had married a relation of his mother. During his residence with Sir William, who employed him as his private secretary, he formed the resolu-tion of embracing the ecclesiastical life, and having taken his M.A. degree, he was ordained, and obtained the prebend of Kilroot, in the diocese of Connor, worth about £100 a year. Disappointed of preferment in England, he accompanied the earl of Berkeley, one of the lords justices of Ireland, as his chaplain and private secretary; but he was again disappointed, and dismissed with the livings of Laracor and Rathbeggan, and the rectory of Augher, instead of the deanery of Derry, which had been pro-mised him. He then settled at Laracor, where he rebuilt the parsonage-house, repaired the church, and dis harged his parochial duties in an exemplary manner. About this time, Miss Esther Johnson, the celebrated Stella, came to reside near him. She was afterwards secretly married to Swift; but the latter would never acknowledge her as his wife; in consequence of which she broke her heart. This amiable woman was the daughter of Sir William Temple's steward, and had been bequeathed a small independence by that gentleman. At the accession of Queen Anne, Swift embarked in politics, in hopes of preferment in England, politics, in mopes of presented in 2013, which he again missed, but in 1713 was promoted to the deanery of St. Patrick's, Dublin, The death of Queen Anne closed all his prospects, and completely embittered his temper. He was for some time very unpopular in Dublin, but came at last to be revered as an oracle. One Wood projected a coinage of £109,000 Irish farthings and halfpence, for which he obtained a patent. Swift immediately addressed a series of letters to the people, under the signature of "M. B. Drapier," urging them not to receive this base coin; and as successful was he, that the patent was withdrawn. He subsequently returned to the university, and, after taking his doctor's degree, settled in Westminster, and became the first physician of his time. Dr. Sydenham was the first who in-troduced the cool treatment of the small-pox; and his writings on consumption, fevers, and nervous diseases, though brief, are universally esteemed. Poultt Thompson, a London merchant, and when about twenty, became resident in St. Petersburg as the correspondent of his father's firm; and, until his accessions. sion to public office in 1830, continued to be engaged in mercantile affairs. His political life commenced in 1826, when he was elected M.P. for Dover; but in 1830 being returned for both Dover and Manchester, he gave preference to the latter. On the formation of the Reform cabinet, he was appointed vice-president of the board of trade and treasurer of the navy; be-came president of the board of trade in 1834; and in 1839 succeeded Lord Durham as governor-general of Canada. In 1840 her Majesty conferred on him the peerage of the United Kingdom, by the title of Baron Syd-nham of Toronto. Under his administration Canada was gradually increasing in prosperity, but he did not live to carry into execution many measures which he had contemplated; for, whilst riding Stella, in 1725, he led a very retired life, and near Kingston, he met with an accident by the wasted much of his time on literary trifles, which falling of his horse, and died Sept. 19, 1841.

Subsequently he went to France, and served under the duke of Salisbury, he conducted the siege of Orleans, which he was, however, compelled to raise in 1429, by Jeanne Darc. At the battle of Patay he was made prisoner; but recovered his liberty not long afterwards. He was for some time again in Ireland, and on his return to France again in relaid, and on his return to raing a guined several victories, and took some strong places; so that his name became a terror to the French. He was slain at the siege of Châtil-lon, 1453. n. in Shropshire, 1873. "LALSO, William, an English prelate, who was, through the interest of his relative the

Talbor, William Henry Fox, a modern Eng lish writer, and the discoverer of the process of ash writer, and the discovere of the process of obtaining pictures upon paper by the action of light, called at first the Talbotype, but which was afterwards, together with other inventions, merged in the general term of Photography. In 1833, while engaged in obtaining drawings of the seenery upon the Lake of Como, by the aid of the eamera-lucida, he was, in his own words, "led to reflect on the inimitable beauty of the pictures of Nature's painting, which the glass lons of the camera throws upon the paper in its focus," and upon the possibility of render-ing these images permanent. Possessing some chemical knowledge, he was aware of the fact that paper could, by chemical agency, be ren-dered sensitive to the action of the sun's rays. Starting from this basis, he made a large number of carefully-planned experiments, and succeeded to an extent sufficiently satisfactory; but not wishing to make known his discovery before he had brought it to maturity, he delayed its publication until he saw the notifica-tion of the invention of the Daguerreotype given to the world. (See DAGUERRE.) This event, he stated, "in some degree frustrated the hope with which he had pursued, during nearly five years, this long and complicated but nearly interesting series of experiments,—the hope, namely, of being the first to announce to the world the citistence of the new act which has since been named Photography." There was, showever, between the two processes, this difference,—Daguerre obtained sum-pictures upon metal plates, and Mr. Fox Tablo upon paper, both mediums being previously rendered sensitive to the action of light by chemical means. Again, both the French and the English inventor had only followed up a principle which had been previously announced by other chemists. These gentlemen were, however, the first to give a practical application to the principle. Da-querre completed his researches by the year generic completes his researches by the year 1839; but it was not until September, 1830, that Mr. Talbot brought his process to any great degree of perfection. He secured his invention by patent, and granted licences to those who desired to make use of the process for commercial purposes. The new art was so creative invention of the desired in the case of the for commercial purposes. The new art was so greatly improved and extended by friesh discoveries, and so widely employed by private persons, that it was found necessary to induce Mr. Fox Talbot to surrender some portions of his patent, which in the interests of science and art that gentleman did. He continued his experiments, and greatly contributed to bring the out of physicorephy to that notify of prefetches. art of photography to that point of perfection which it subsequently attained. He likewise which is subsequently attained. He likewise gave an account of some experiments relative to the engraving of steel plates by means of photography. In this art, however, very much more satisfactory results were obtained by Miépoe de St. Victor. (See Nieros de Saire Victora). Mr. Talbot, at a subsequent date, about 1680; D. 1790.

In his 18th year he was sent to London, and placed under the elebarated special pleader Chitty, to acquire a knowledge of the law. He was called to the har at the Middle Temple in 1821. By to the bar at the Middle Temple in 1821. By assiduous application he rose in his profession. becoming a serieant-at-law and recorder of Daybury. He was returned to Parliament by the borough of Reading in 1835, and retained his seat until 1841. He was returned by the same constituency in 1847; but resigned his seat in 1849, upon being appointed a judge in the court of Common Pleas. While in Parliament, he introduced two important measures, -the Custody of Infants' Act and the Copyright Act. In literature he likewise laboured industriously. Retrature he likewise laboured industriously. During several years he reported circuit coses for the "Times" newspaper, and was a contributor to the "New Monthly Manzanie," the "Edinburgh" and "Quarterly" reviews, and the "Law Magazine." In 1836 his tragedy of "Ion" was acted at Covent Garden Theatre. At a later period he produced "The Athenian Captive," "Glencoe; or the Fate of the Macdonalds," and "The Castilian," tragedies, the last of which was not placed upon the stage.

Life;" "Final Memorials of Charles Lamb;" Vacation Rambles and Thoughts, comprising the Recollections of Three Continental Tours: and a "Supplement to the Vacation Rambles." In 1844 he was nominated D.C.L. of the uni-versity of Oxford. He had the reputation of being an eloquent advocate, sound lawyer, and upright judge. Within a distinguished literary and legal circle, his social qualities and amiable disposition caused him to be both loved and respected. The manner of his death was pain-fully sudden. While charging the grand jury at the opening of the Stafford assizes, he was observed to falter, and almost immediately afterwards his head fell forward upon his breast. On being removed from the court, it was found that he had breathed his last. B. near Stafford, 1795; D. 1854.

Taliacotius, or Tagliacozzi, Gaspar, tal-ya-kot-se, a celebrated Italian professor of medicine and surgery at Bologna. He is famous as having first employed the Taliacotian operation by which he was enabled to restore lost noses. He described the theory of this operation in a work entitled "De Curtorum Chirurgia per work entities the curvoum changes per Institute, published after his death at Venice. According to the method there explained, a portion of the skin taken from the upper arm was grafted upon the seat of the former nose, by a long series of painful operations. Some writers assert that Taliacotius could never have practised what he taught; but, on the other hand, several witnesses have left on record statements to the effect that they either saw the surgical feat performed, or knew persons whose

noses had been so restored. In modern days, ais mode of operating has been superseded by the "Indian method," in which the skin for the new nose is taken from the forchead. There the new nose is taken from the forchead. There as formerly a stutue of Talkacotius in the lecure-room at Bologna, representing him with a nose in his hand. B. at Bologna, 16fe; p. 189.

TALLART, Camille d'Hostun, Duke de, tall-lart, marshal of France, who served under Louis XIV. in Holland, in 1672, and displayed such talents and bravery, that Turenne gave him a distinguished command at the battles of Mulhausen and Turkheim. In 1693 he was made lieutenant-general, and in 1693 was sent as ambassador to England, to negotiate as to the succession to the crown of Spain. Upon the war of the Spanish succession breaking out, Tallart was placed in command of the army of the Rhine, in 1702, and the year following, was made marshal of France. In the same year he gained a great victory over the elector of Hesse, near Spires. On that occasion he wrote to Louis XIV, that "he had taken more colours and standards than his majesty and lost soldiers." In 1704 he was signally deeated at Blenheim, by the duke of Marlborough, taken prisoner, and conveyed to England, where he remained during seven years. On his re-turn to France, in 1712, he was created a duke, and in 1726 was nominated minister of state.

TALLEYBAND, tall-le-rind, the name of a younger branch of an ancient and distinguished family of Perigord. The first who bore the name was Helic de Talleyrand, who lived about 1100. The most celebrated members of this family were:-

TALLEYBAND-PERIGORD, Helie de, a French Cardinal, who took a prominent part in the election of the four popes, Benedict XII, Clement VI., Innocent VI., and Urban V. He was employed upon several important affairs by the pontifical court, and was sent to London to negotiate a truce between England and France, and also to procure the release of John, king of the latter country. He was the contemporary and friend of Petrarch. B. 1301; D. 1364.

TALLEYRAND-PERIGORD, Henry de, Count de Chalais, was the favourite of Louis XIII., and the lover of the duchess de Chevreuse. He behaved with bravery at the sieges of Montpellier and Montauban; but having engaged in a con-spiracy against Richelieu, he was condemned to death, and perished upon the scaffold in 1626.

centi, and persaneu tipon trie scannière Angeliq Talders Hard-Pristifeon Alexandre Angeliq de, became archibishop of Rheims in 1777, in which office he evinced great administrative talent and liberality. He was sent as deputy to the State-general; but subsequently emigrated, and, while in exilic attached himself to the Count de Provence, afterwards Louis XVIII. In 1817 he was preferred to the cardinalate and archbishopric of Paris. B. at Paris, 1736; D. at the same city, 1822.

TALLEYBAND-PERIGORD, Charles Maurice de, a celebrated French diplomatist, who, when only a year old, was rendered lame for life in consequence of a fall. Thus precluded from following a military career, which, as the eldest son of a noble family, he considered as his birthright, he was educated for the priesthood

at the College d'Harcourt, and afterwards at the Sorbonne. Until his 20th year he had been neglected by his parents, who appear to have been inspired with some unnatural averhave been inspired with some unmatural average tests to their crippled son, and was introduced as the Abhé de Perigord at the coronation festivities of Lonis XVI. in 174. His great latent abilities had been assiduously cultivated, and his witty conversational style, formed upon the model of Voltairs and Fontenelle, shope forth even among the brilliant talkers to be found in the Parisian society of that day. In his 26th year he was appointed general agent—the minister of state—of the Gallic church. In this important office he remained during eight years, being then preferred to the bishopric of years, semg then preferred to the Disnopric of Autum. This occurred in 1788, and with it commenced his political career. He acted as a member of the States-ceneral, convoked in the following year. At this period he adopted almost entirely those revolutionary principles which were so rife in his native country. He supported Mirabeau, advocated the sale of the church lands and the secularization of education; finally, he renounced his bishopric, and cast away for ever the ecclesiastical character which I'e had so much against his own inclination been driven to assume. The Constitutional Monarchy party desiring to maintain peace with England, selected Talleyrand as the only man fitted to execute the delicate commission of opening negotiations with the court of St. James's. He was sent to London in 1792, as the colleague of Chauvelin, the nominal ambas-sador; but finding himself unable to effect anything towards creating an understanding between the English court and the French peace party, he shortly afterwards returned to Paris. Upon the fall of the French monarchy, Paris. Upon the hall of the French monarchy, he, with some difficulty, quitted Paris, and repairing to London, supported himself there by the proceeds derived from the sale of his library. Strongly disliked by the English government, he was in a short time ordered to leave the country. He sailed for the United States, and remained there until 1796, when he was recalled to France, through the influence of Madame de Staël. Under the Directory he of Madame de Stael. Under the Jurectory no was appointed minister for foreign affairs. After Napoleon's return from Egypt, Talleyrand, with great political foresight, attached himself to the fortunes of the future emperor. Napoleon appears to have understood Talleyrand from the time of their first interriew, after the latter had been reinstated as foreign minister. "Talhad been reinstated as foreign minister. "Talleyrand is a dexterous fellow," Napoleon is reported to have said; "he has seen through me." While Talleyrand acted as foreign minister, the fortunes of his master were in the ascendant. The concordat with the pope, which paved the way for the empire; the treaties of Luneville, Amiens, of Presburg, and of Tlisit, were principally the work of the ex-bishop of Autun. In reward of these services, Napoleon created his minister Prince of Benevento and vice-grand elector of the empire. Nevertheless the two ambitious men were fast being estranged from each other. Talleyrand was deprived of the portfolio of foreign affairs in 1807; in 1809 the ex-minister expressed himself so unreservedly in condemnation of the expedition to Spain, that Napoleon commanded him to resign

At the capitulation of Paris in 1814, Talleyrand again appeared as a public man. The emperor Alexander took up his residence in his house, and Talleyrand used the opportunity to acquire over the Russian potentate a strong degree of influence. He was appointed minister of foreign affairs by Louis XVIII, and was chosen as the representative of his native country at the congress of Vienna; but after the Hundred Days he lost the favour of the restored Bourbons: and during the interval between the peace of Paris and the Revolution of 1830, he occupied the position of leader of the liberal and constitutional party, and indeed was regarded as an opponent to the elder branch of the Bourbons. When, in 1830, France became a constitutional monarchy under Louis Philippe, Talleyrand was nominated ambassador extraordinary and mi-nister plenipotentiary to the court of St. James's, which post he retained until 1835. During this interval he sought, by every possible means, to bring about that alliance between England and France, as constitutional govern-ments, which had been the wish of his whole life. He likewise signed the quadruple alliance of England, France, Spain, and Portugal, and assisted in the establishment of the kingdom of Belgium. On relinquishing his ambassadorial functions, he retired into private life. Talleyrand was unquestionably one of the greatest men of his time; to a great talent for business, he added that perfect command over himself which is so advantageous to a diplomatist. His with was caustic, ready, and penetrating, a crowd of examples attesting his accomplishments in this respect. He preserved all the qualities of his great mind until the close of his life. Ho has been charged with inconsistency, because he served under governments so different in their principles; but if it be admitted that, as some eminent authorities declare, he had always the welfare of his country at heart, it may be conceded that he was ever actuated by noble controlled that he was ever accutated by home aims, although he chose various modes of executing his ideas. He left in manuscript "Momoirs" of his life. B. at Paris, 1754; p. 183.

TALLIEN, Jean Lambert, tal'-le-ā, a celebrated

French revolutionary leader, who produced the overthrow of Robespierre. He was engaged as a reader and corrector of the press in the print-ing-office of the "Monieur" when the Statesgeneral were convoked; and, having brought out a small newspaper called the "Citizen's Friend," in which the court and monarchy were violently denounced, he came to be re-garded as a patriot by the excited populace. Becoming a member of the Jacobin Club, he soon rose to great influence. He supported Danton in all his sanguinary measures, and was one of the most violent persecutors of Louis XVI., for whose death he voted. In 1793 he was sent by the Convention to Bordeaux, where, during several months, he consigned hundreds to the scaffold. In 1794 he was rehalled to Paris, and narrowly escaped the fate of his patron, Danton. Contriving, however, o ingratiate himself into favour with Robestierre, he was elected president of the Conventional Control of the Convention of the Conventi ion. In this position he worked secretly for the overthrow of the dictator; but Robespierre, detecting his schemes, denounced him in the Convention. Tallion nevertheless contrived to save himself by working upon the fears of the Convention, whom he declared it was the intenthe office of chamberlain. From that time save himself by working upon the fears of the Talleyrand kept aloof from the court, and it is Convention, whom he declared it was the intensation processed the speedy fall of the empire, skin of Robespierre to proscribe. This proved

so successful, that Tallien was supported by the so successit, that lather was supported by the greater number of the revolutionists, and was in a position to denounce Robespierre, who, with his colleagues, perished. He subsequently became a member of the Committee of Public Safety, and in 1795 was sent as commissioner to Salety, and in 1795 was sent as commissioner to the army under Hoche. He went to Egypt in 1798; but was in 1801 dismissed, and sent back to France. He then fell into great distress, which was relieved by Fouche's appointing him consul at Alicante. At the Restoration he lost this post; and, though one of the regicides, was allowed to live in Paris, where he died

miserably poor, in 1820.

Tallis, Thomas, tal-lis, an eminent English musician, who was gentleman of the chapel to Edward VI. and Queen Mary, and his salary is said to have been seven pence-halfpenny a-day. In the reign of Elizabeth he was appointed organist, in conjunction with his former pupil Bird, with whom he published a collection of hymns for church service. B. about 1529:

TALMA, François Joseph, tall-ma, a celebrated upon the stage in his 20th year, which was pronounced a failure. He thereupon resumed the practice of the dental art, for which he had been educated. Four years subsequently he made another appearance as an actor; and, after two years' application to his new profes-sion, succeeded in winning universal approbation. He advanced rapidly, until he was ac-knowledged to be the best tragic actor in France. Emowledged to be the best trages actor m France. The first to perform the part of Titus in a Roman togs, he shortly afterwards carried out a total reform in stage costume. The emperor Napoleon I., and subsequently Louis XVIII. presented him with many flattering marks of their esteem; and during his last illness the addiences at the Théatre Français required each company to the property of the condition before a progressive of the property of the condition before the progress of the condition before the progress of the condition before the progress of the condition to the progress of the condition before the progress of the condition before the progress of the condition to the progress of the condition before the progress of the progress of the condition before the progress of the progres evening to be informed of his condition before the performance was allowed to begin. He was pronounced as without a rival in seventy-one characters; among which were Coriolanus, Macheth, Hamlet, Othello, Sylla, Casar, and Nero. While a child he had spent about eight years in England, and had thus acquired the elements of the English language, in which he subsequently improved himself until he spoke it perfectly. The friend of John Kemble, he went to London in order to be present at the farewell performance of that actor. B. at Paris, 1763; D. at the same city, 1826.

TAPPA, Spurius Metius, tar-pa, a Roman critic in the time of Augustus, who was appointed, with four others, to examine in the Temple of Apolle the merit of poetical pieces and plays. Cicero and Horace mention him

with honour.

Tarrera, tar-pe'-ya, the daughter of Tar-peius, governor of the Capitol under Romulus. She betrayed that place to Tatius, the general of the Sabines, on condition of receiving what himself and his soldiers wore on their left arms, meaning their bracelets of gold. When Tatius entered the place, he threw his bracelet and shield on Tarpeia, in which he was imitated by all his followers; so that she perished under the weight. She was buried on the mount which was afterwards called by her name, and from which persons convicted of treason were

precipitated. TARQUIN THE ELDER, tar'-quin (TARQUINIUS tar-quin'-i-rs), according to early Roman history, the fifth king of Rome, was the son of Greek parents, and born in the town of Tar-

quinii, in Etruria. His original name was Lu-cumo, which he changed to Tarquinius on going to Rome, by the advice of his wife Tanagoing to Rome, by the surface of an who cameradiii. (See TANAQUIL.) He so endeared himself to the Romans by the liberality of his manners, that Ancus Martius nominated him guardian of his children. The people, on the death of that monarch, placed, in 618 B.C., the crown on the head of Tarquin, who reigned with great moderation and popularity. He defeated the Latins and Sabines, and conquered Etruria, He increased the number of the senate, repaired the Capitol, which he ornamented with several elegant buildings, and formed aqueducts and subterranean sewers. He also introduced several

reforms into the constitution of the state. He

was killed by assassins, set on by the sons of his predecessor, 578 B.C

Tarquin, surnamed Superbus, "The Proud," or "the Tyrant," was the son of the preceding, and seventh and last king of Rome. He married Tullia, daughter of Servius Tullius, and at her instigation murdered his father-in-law, and seized the kingdom. His reign was tyrannical and extravagant, so that his subjects were about to revolt, when, to divert their attention, he the siege of Ardea, the infamous conduct of his son Sextus proved the ruin of his family. (See son Sextus proved the rum of his lamily. (see Lucretia and Brutus.) The Romans rose and shut the gates against Tarquin, who retired to Etruria. Tarquin subsequently found protection under the mighty Lars Porsenna, of Clu-sium. Several attempts were made by Tarquin to regain his kingdom; but, after the battle of to regain his kinguoun; bus, after the backe of the Lake Regillus, in 496 a.c., when Aruns, his only surviving son, was slain, the old king aban-doned the contest in despair, and, retiring to Cuma, died there in 493 n.c. Niebuhr declares that the greater portion of the history of the Tarquins is fabulous. Macaulay, in his "Lays of Ancient Rome," makes use of the story of the Tarquins as the subject of two ballads—"Horatius," and "The Battle of the Lake Regillus." The historian is of opinion that the history of the Tarquins, as we have it, has "been compiled from the works of several popular poets; and one at least of these poets appears to have visited the Greek colonies in Italy, if not Greece itself. . . . Many of the most striking adventures of the house of Tarquin, before Lucertia makes her appearance, have a Greek character." Tarquin built the Capitol, purchased the famous Sibylline books, which he deposited in the threefold temple of Jupiter, Juno, and Minerva, erected by him.

Targuin, Sextus, son of Tarquin the Prond, pretending to be a deserter from his father's army, took refuge at the Latin town of Gabii, whose citizens became so charmed with him, that he was raised to the highest offices, and placed in command of the Gabian army. After putting to death or banishing the most distinguished men in the city, he treacherously surrendered it to his father. He violated the chaste Lucretia; whereupon Brutus roused the Roman people, and the family of the Tarquins were bandshed for ever. His father retired to Etruria, with his son Aruns: but Sextus returned to Gabii, where, his former faithlessness being remembered, he was put to death,

TARTAGLIA, Niccolo, tar-tal'-ya, a celebrated Italian mathematician, who was the son of a tenian inatacematerar, who was the sort of a porter, and was left an orphan in his sixth year. His surname is unknown; that by which he is called, signifying "stammeter," being a derisive epithet bestowed upon him in his youth, becontract bestower upon him in lis youth, so cause of an impediment in his speech, which arose from his having been wounded in the mouth by a French soldier at the taking of Bressin in 1512. After being employed as a tutor at Verona and Vicenza, he became pro-fessor of mathematics at Bressia, which place he tessor of mathematics at Frescia, which place he quitted for Venice, where he held a like appointment. He composed a number of learned works upon natural philosophy, algebra, and military engineering. The algebraic formula which is called Cardan's rule, was, in reality, discovered by Tartaglia, who, after many importunities, consented to impart a knowledge of it to Cardan. The latter, in his "Ars

Magna," published the rule, although he had the governor-general (Van Diemen), and of two made a solemn pledge to Tartaglia that he of the council who signed his instructions, apwould keep it secret. Thereupon, Tartaglia plied to places at the head of the gull; as is challenged Cardan to a public disputation upon mathematical subjects. The disciple of Cardan, mathematical subjects. The disciple of Cardan, Luigi Ferrari, accepted the challenge. A public contest between the two was held at Milan; but when Tartaglia was triumphing over his rival, the spectators, anxious to preserve their townsman Ferrari from defeat, raised a tumult, which brought the sitting to a termination. TARVER, John Charles, tar-ter, a learned philologist, was born in France, of English parents, who were thrown into prison at the outbreak of war between England and France in 1798. His parents contrived to effect their ways. their escape; but he was left behind until a favourable opportunity should occur to send him to his family. The French gentleman in whose charge he had been placed, educated him as his charge he had been placed, educated him as his own son, and, in 1893, obtained for him an appointment in the "Administration de la Marine." He subsequently became secretary to the admiral of the fleet at Toulon, Brest, and other ports. On the conclusion of the war, he paid a visit to his family, and shortly afterwards, being resolved to settle in England, he wards being resolved to settle in England, he resigned his post under the French govern-ment. He obtained the situation of French master in the grammar-school at Macclesfield. In 1826 he was nominated to a like post in Eton school, and retained it until his death. He produced a work of great importance, entitled "The Phraseological French Dictionary," and likewise published "Dictionary of French Verbs," "Lectures on French History," and revised editions of the French grammars of Levizac and Wanostrocht. TASMAN, Abel Jansen, tas-man, a celebrated Dutch navigator, who, having distinguished himself in the service of the Dutch East India Company, was commissioned by Anthony Van Diemen to explore the coast of the Australian continent. Tasman sailed from Batavia in 1642. He first discovered a land which he named Van Diemen, and afterwards the country now called New Zealand. In 1644 he set sail upon a second voyage, the results of which were carefully concealed by the Dutch government. But, says Flinders, "it seems to be the general opinion that Tasman sailed round the Gulf of Carpentaria, and then westward along

also that of Maria, the daughter of the governor, to whom Tasman is said to have been attached." Nothing is known of the life of Tasman, neither his birthplace nor where he

TASSIE, James, tas'-se, an eminent Scotch numismatist, who was bred to the business of a stonemason, but, happening to visit an exhibi-tion of paintings at Glasgow, he resolved to become an artist. Still continuing to work at his trade, he studied drawing in his leisure hours. In 1766 he repaired to Dablin, where he found employment as a leulptor and modeller. In the same city he was introduced to Doctor Quin, who was engaged in making experiments ount, who was engaged in making experiments in the art of imitating gems by means of coloured glass. Tassic soon afterwards became assistant to this gentleman, and made so much progress in his new employment that he was advised by Dr. Quin to make it his business, and to establish himself in London. He acted upon this suggestion, and, after struggling with difficulties for a time, gradually attained a high reputation. By the year 1775 he had collected a large number of ancient and modern gems, of which he sold sulphur impressions, or pastes. In 1788 he was commissioned to execute a set of casts of his gems for the empress of Russia, as, at a later period, his nephew and successor supplied the emperor Alexander with a set of easts taken from the valuable coins which had casts taken from the valuable comes when all formerly belonged to Dr. William Hunter, and of which he had become the proprietor. His pastes were very much used by the jewellers, who set them in rings, bracelets, &c. In 1791. who set them in rings, bracelets, &c. In 1791 Tassie published a curious but important work, in the shape of a catalogue of his collection, which at this time contained upwards of 15,000 articles. To this catalogue, which was com-prised in two thick quarto volumes, was ap-pended a treatise by Mr. E. Raspe, upon the art of imitating gems by means of pastes, as well as some valuable information respecting the history of engraving upon stones. Tassie obtained from the Society of Arts a prize for his successful imitations of ancient onyx. After his death, his business was continued by his nephew in Leicester-square. Tasso, Torquato, a celebrated Italian poet, was the son of the preceding, whom he accompanied to France, and, though then but nine years to France, and, though then but him years old, wrote verses on their misfortune, in which he compared himself to young Ascanius escaping with Æneas. Young Tasso was nius escaping with Aneas. Foung 14550 was sent to Padua to study the law, and while there wrote his poem of "Rinaldo," at the age of eighteen. In 1566 he was taken into the service of Cardinal d'Este, brother of the the service of cardinal desig, brother of the duke of Ferrara, with whose sister, the Francess Eleanora, he fell in love. This fatal passion proved the source of that melancholy humour of which he was the prey during twenty years. The duke of Ferrara, however, was unaware of this poetical passion, and made Tasso his especial tavourite. Quitting Ferrara, he went to his sister, at Sorrento; but his love for the princess becoming stronger by absence, he returned to the court of Ferrara, where, in the presence of the duke, he had the imprudence to throw a knife at one of the domestics of his patron, who ordered Tasso to be taken to a convent, and there confined, as a man deprived of his reason. Effecting his escape from this place shortly afterwards, he repaired to Naples, where for some time he enjoyed repose. After wandering over Italy in an erratic manner, Tasso, in 1579, returned to Ferrara, when, being refused admittance to the duke's presence, he uttered some contemptuous words as to the family of Este; whereupon he was arrested, and during seven years was confined in the hospital of Santa Anna as a lunatic. At length he obtained his liberty, through the intercession of Vincenzo Gonzaga, son of the duke of Mantua. In 1592 Pope Clement VIII., who was a great admirer of his talents, called him to Rome, where he was received with honourable marks of distinction; and great preparations were made for solemnly crowning him in the Capitol as the prince of poets, when he fell sick, and died on the evening before the intended ceremony. The work which has immortalized his name is the epic poem of "Jerusalem Deli-vered," which has been translated into English by Hoole, Fairfax, Hunt, and others. TAXLOR, Rowland, tai'-lor, an English divine 1AXIOS, Kowland, 2a-409, an English divine and marty, who is claimed as anesstor of Pishop Jeremy Taylor, by Heber. Archbishop Cramer, whose chaplain Taylor was, appointed him to a living in Suffolk. Under the reign of Mary he was summoned to London, to answer the charges brought against him of having a summoned to adolescent actions to the control of the control married, and refusing to celebrate mass in his church. He was condemned to be burnt at the stake; which sentence was carried out on Aldham common, near Hadleigh, Suffolk, in

TAYLOR, John, commonly called "the waterpoet." After going to school at Gloucester, where, he says, he could get no further than his accidence, which "gravelled" him, he repaired to London, and was bound apprentice to a waterman. Notwithstanding the laboriousness of this employment, he wrote a number of or this employment, he whole a humber of poetical pieces, from which he took the appellation of the king's water-poet. An enthusiastic royalist, he, upon the outbreak of the Revolution, went to Oxford, where he kept a tavern which was much resorted to by the students. Taylor aided the royal cause by his satires and When Oxford surrendered, he returned to London, and opened a public-house, setting up the sign of the "Mourning Crown." This, however, he was obliged to remove; on which he hung up his own portrait, with the following verse:-

Taylor

"There's many a king's head hang'd up for a sign, And many a saint's head too: then why not

mine?'

He composed upwards of eighty pieces in prose and verse, which exhibit the workings of a vigorous but uneducated mind. These effusions contain many curious pictures of the time in which their author lived. B. at Gloucester,

He was also appointed chap-lain to that prelate and rector of Uppingham, in Rutlandshire. In 1642 he received the degree of doctor of divinity from Charles I., whose chaplain he was, and to whose cause he adhered. After the defeat of the royalists, he retired to Carmarthenshire, where he taught a school for a livelihood. He afterwards went school for a livelihood. He afterwards went with Lord Conway to Ireland, where he wrote his "Cases of Conscience." Charles II, at his restoration, preferred Taylor to the bishopric of Down and Connor. In the same year he became privy councillor and vice-chancellor of Trinity College, Dublin. Bishoop Heber thinks that Jeremy Taylor was removed to a distance from court principally because he had been married to a natural daughter of Charles I, which circumstance might have crizen the exmarries to a natural caughter of Charles I., which circumstance might have given the exemplary bishop a plausible pretence for speaking plainly to the king upon many parts of his conduct. Bishop Taylor wrote, among other eloquent works, "The Great Exemplar, or the Life and Death of Jesus Christ;" "Holy Living and Dying," and several sermons and controversial and pious treatises. "Whether," says Bishop Heber, in his life of the learned divine, "whether he describes the duties, or dangers, or hopes of man, or the mercy, power, and justice of the Most High; whether he exhorts or instructs his brethren, or offers up his supplica-tions in their behalf to the common Father of all, his conceptions and his expressions belong to the loftiest and most sacred description of to the lottless and most stated description of poetry, of which they only want whit they cannot be said to need,—the name and the metrical arrangement." The works of Jeremy Taylor were edited and published by Bishop Heber in 1822. B. at Cambridge, 1613; D. at Lisburn, Ireland, 1667.

TAYLOR, Sir Robert, an English sculptor and ratios, Sir Moore, an Engine scanpor are architect, who was at first placed under Sir Henry Cheere, a sculptor, and subsequently studied for a short period at Rome, whence he was suddenly recalled by the death of his father. Thus thrown upon his own resources, he set up in business as a statuary, and meeting with some success as a sculptor of monuments for architectural purposes, he resolved to devote himself entirely to architecture. He soon found a great deal of employment, and, in 1756, was engaged, with Dance, to make alterations on old London-bridge. He added some wings to the Bank of England, erceted the Stone Buildings and the Six Clerks' Office, in the vicinity of Lincoln's Inn. His villa for Sir Charles Asgill, and the seat of Lord Grimston at Gorham-bury, are among the best of his designs exe-cuted for private persons. He was very fortunate in his profession, and obtained the appointments of surveyor to the Admiralty, Bank of England, Greenwich Hospital, and the Found-ling Hospital. While holding the office of sheriff of London, in 1783, he was created a knight. He bequeathed a sum of money to the university of Oxford, wherewith to found an institute for the study of modern languages. With these funds were erected the Taylor Buildings, at Oxford. In the Black Hawk war, and in the Seminole war, he evinced as much tact as bravery in the execution of several harassing employments. In 1840 he was appointed to the chief command of the south-western division of the United States army. After the annexation of Texas, he was ordered to protect the new state from a threatened invasion from Mexico; but after remaining upon the defensive for several months, he proceeded westward, and having encountered the Mexican army under Santa Anna, numbering 20,000 men, he inflicted a signal defeat upon it at Buenavista, although his own force was not greater than 6000. This decisive engagement led to the peace of 1848, after which he retired to his estate in Louisiana. In the same year, however, he was put in nomination and elected

to the presidentship of the United States.

TAYLOR, Isidore Justin Severin, Baron, a
modern French antiquary and traveller, who was descended from an Irish family naturalized in France. His early education was designed to qualify him for a military career, but his own quality him for a military career, but his own taskes were towards science and art. Instead of entering the Polytechnic School, he became the pupil of the painter Suré; but, in a short time, commenced writing art-criticisms for the Paris journals. About 1810 he set out upon a tour in Belgium, Germany, and Italy. Re-turning to France during the last disastrous days of the empire, he was currolled a sub-lisatenant of the Garde Mobile. Under the Restoration he served in the Royal Guard, and took part in the Spanish campaign; but, on at-taining the grade of chef descatron, he retired from the army, having formed a resolution to devote himself to literature and the arts. In 1824 he was appointed royal commissioner of the Théâtre Français. Whilst holding this office, he introduced several improvements in the scenery and appointments of that stage, and it was to him that Victor Hago owed the first representation of his "Hernani." The go-vernment of Charles X. sent him to Egypt to obtain the obelisk of Luxor and other rare objects of antiquity. After the Revolution of 1830, Louis Philippe appointed him inspector of the fine arts; in which capacity he visited Taylor

Tertullian, Quintus Septimus Florens, tertul'-li-an, one of the fathers of the Church, was, according to St. Jerome, a native of Carthage, and the son of a centurion in the employ of the Roman proconsul. He became an eminent rhetorician, and was at first a pagan; but the constancy of the martyrs converted him to Christianity, which he defended with great zeal and eloquence. From Carthage he went to Rome, and in the persecution under Severus. he drew up a famous apology for the Christians. In the latter part of his life he fell into the errors of Montanism. The best editions of Tertullian's works are those of Rigaltius and of Semler. St. Jerome thus speaks of his writings :-

THACKERAY, William Makepeace, that-e-rai,
a distinguished English novelist, who came of an old Yorkshire family, and was the son of a gentleman in the civil service of the East India Company. Born in the East, the future novelist was sent at an early age to England, and re-ceived his first education at the Charterhouse school, afterwards passing to the university of Cambridge, where he had as contemporaries the Cambridge, where he had as contemporaries the poet Tennyson, J. M. Kemble, the eminent Saxon scholar, and other young men who subsequently became famous in literature and science. Quitting his "alma mater" without a degree, and in the enjoyment of a re-pectable fortune, he formed the resolution of studying pictorial art as a profession. With this view he pictorial art as a procession. With this view he repaired to the continent, and spent some time at Weiman, where he made the acquaintance of Göthe. His artist life was continued until between his 25th and 30th years, when he relinquished the crayon for the pen. From the commencement of his literary eareer he appears to have exhibited high qualities as a writer. His progress to popularity was nevertheless slow. He is understood to have been employed upon the "Times" newspaper while under the editorship of Barnes; but it was in consequence of his success as a contributor to "Fraser's Magazine" that he became recognised as a witty, elegant, and original writer. His articles in this publication were signed "Michael Anm ams publication were signed "Michael Are gelo Titimarsh," and, under the same charac-teristic pseudonym, he produced, separately, "The Paris Sketch-Book," "The Second Runeral of Napoleon," in three letters to Miss Smith, of London; and the "Chronicle of the Drum." He is chiefly known by his edition of Shakspere, which, though depre-ciated by Warburton, possesses considerable enacted by Warburton, possesses considerable merit, and shows no want of judgment. As an editor of Shakspere, he was vastly superior to Pope, whose edition he criticised in a pamphlet entitled "Shakspere Restored; or, Specimens of Blunders committed and unamended in of Blunders committed and maintenant in Pope's Edition." For this, Pope assailed Theo-bald with all his powers of ridicule, and made him the hero of the "Dunciad." Theobald revenged himself in an admirable way: he pro-duced an edition of Shakspere which extinguished the inaccurate one of Pope. Pope and Theobald afterwards became reconciled, and the former substituted Colley Cibber for Theobald, as the chief dunce in his satire. He was likewise the author of a Life of Sir Walter Raleigh, and some periodical papers inserted in a weekly journal of his time. B. at Sittingbourne, Kent, date unknown; D. 1744.

THEODOSIUS I., the o-do's i-us, a Roman emperor, surnamed the Great. His father, Theodosius, distinguished himself in Britain and Airica, but was beheaded by order of Valeus in 376. The son was called to court by Gratian, associated with himself in the empire, and appointed governor of Thrace and those provinces which Valentinian had possessed in the East. He defeated the Goths in several actions, and ompelled them to sue for peace. His fame spread into Persia, and Sapor III, solicited his alliance. In 385 a conspiracy was formed against him, but it was discovered, and Theodosius displayed the magnanimity of his disponent sition by pardoning the criminals. But in 390 he tarnished his fame in causing the inhabitants of Thessalonica to be put to the sword, on account of an insurrection which had taken place in that city. St. Ambrose was so struck with horror by this transaction, that he refused to admit Theodosius into the church till he had performed penance during eight months. The emperor, having defeated Maximus, marched to Rome, where he received the honours of a triumph; after which he returned to Constantinople and defeated the barbarians who had ravaged Macedonia and Thrace. He then ravaged Macedonia and Thrace. He then turned his arms against the usurper Eugenius, who had been placed on the throne after the murder of Valentinian. Having defeated him uileia, he caused him to be beheaded, in 1016

394. He thus became emperor of the whole Roman world, and was preparing to reform the administration of his dominions by wise edicts. when his health gave way. THERS, Louis Adolphe, a celebrated French statesman and historian. It was intended to place him at the Ecole Polytechnique at Paris, in order to qualify him for a military career; but the fall of the empire, and the peace which ensued, leaving only a faint prospect of success to a young military man who possessed no influence, he resolved to adopt the law as a profession, and accordingly entered the college profession, and accordingly entered the of Aix, where he distinguished himself by his of Aix, where he distinguished himself by his set up in practice as an advocate; but meeting with little success, resolved to apply himself to literature, and, with that view, repaired to Paris. After acquiring some celebrity as a writer of political articles for various French newspapers, he, in 1823, produced the first volume of the "History of the French Revolution." This work, which was not completed until 1830, had but little success at the outset. The revolution of 1830, however, allowed him to take a pro-minent position. With Armand Carrel, Bá-ranger, and others, he had previously exhibited great energy in denouncing the governmental system of the Bourbons; and when Louis Philippe became the constitutional king of France, Thiers, as one of the chief promoters of the new order of things, was rewarded with a post in the ministry of Finance. He next rose o the highest reputation as a parliamentary grator, and upon the formation of the Soult ministry, in 1932, Thiers became minister of the Interior, an office he exchanged for the ministry of Foreign Affairs in 1836. As a statesman, he winced a policy antagonistic to England, and omewhat in favour of war. Opposed by Guizot, he was at length supplanted by the latter; whereupon Thiers returned to authorship, and devoted his leisure to the composition of his "History of the Consulate and the Empire." In politics he was regarded as one of the leaders of the opposition to the measures of the period he received material assistance from in pointies he was regarded as one of the his brother, the above-amend, and his wife, leaders of the opposition to the measures of the Julia Thierry. He took up his residence first at Brussels, and then in London; but sub-sequently returned to the French capital on declaring his acquiescence with the empire. No statesman of modern times has been more often charged with want of earnestness and of principle. As an historian, his brilliant talents are obscured by his want of truth and candour.

He has unquestionably surpassed all his predecessors," observes an eminent critic, "in the inner life of the first empire. . . . His work is the picture of the first empire, and the apotheosis of its chief. The representation, indeed, may not always be accurate, and the panegyric not always just.... But we complain of this history, not simply for its mis-statements of facts and its false political reasonings, but also its false morality. We have said that it is the aim of this work to vindicate the first empire. In order to attain this end, the author's facts are strained to meet a distorted morality, and his judgment is often strained to meet a distortion of facts." B. at Marseilles, 1797.

Thomson, James, tom-son, an eminent Scotch poet. The son of a clergyman, he was educated at Jedburgh, and afterwards at Edinburgh, with a view to the ministry in the Church of Scotland, which profession he declined. Having written his poem of "Winter," he repaired to London, where, according to Dr. Johnson, he wandered about "with the gaping curiosity of a new comer; his attention upon everything rather than upon his pocket." In consequence, he lost his handkerchief and letters of recommendation. After experiencing many of the sharp stings of poverty, he obtained a publisher for his "Winter," which, however, lay unno-ticed for a considerable time. Afterwards, its great merit becoming appreciated, Thomson

After studying three years in London, he visited the Continent; and, returning to the metropolis, commenced practice. In 1798 he published a work entitled "The Phi-1100 purposes and work entitled "The Philosophy of Medicine, or Medical Extracts on the Nature of Health and Disease," and soon after brought out another work, called "The Philosophy of Politics," &c. His chief fame, however, is derived from his magnificant "Temple of Flora, or Garden, of the Botanies," part Philosophes "n. 1720. Poet, Painter, and Philosopher." D. 1837. в. 1758:

THORNALDSEN, Bertel, or Albert, thorward-sen, a celebrated Danish sculptor, who was the son of a carver in wood in humble circumstances. Until his eleventh year he worked at the same business; but being sent, about this time, to the school of the Academy of Arts at Copenhagen, he made such progress, that, in two years, he became a better carver than his father, and began to be employed upon the figure-heads of ships. At seventeen he gained a silver medal for a bas-relief of Cupid reposing, and in his twenty-second year won the gold medal of the Fine Arts Academy, to which was added a travelling studentship for three years, his expenses to be defraved by the government. In 1796 he set out for Italy on board a Danish frigate, and in the following year landed at Palermo. After a short stay at Naples, he proceeded to Rome, where he studied and worked under the auspices of his countryman, Zoega. An accident prevented his returning home at the expiration of his term, and, having found patrons at Rome, he resolved to settle there. He modelled a statue of Jason, which Canova spoke of as being in "a new and grand style," an opinion which was repeated to Mr. Thomas Hope, who, accordingly, visited the young sculptor's studio, and gave him a commission sculptor's studio, and gave him a commission for a marble copy of the work. This was the first success of Thowardsen, who thenceforth rose rapidly into reputation. His bas-reliefs of Summer and Autamn, the "Dance of the Muses on Helicon," "We use with the Apple," "Gupid and Psyche," the "Friumph of Alexander," for the Quirinal Paliace, and other works, brought him tame, and were the principal efforts of his genius during his first sojourn of twenty-one years at Rome. In 1819 he returned to Copenhagen, where he was received with enthusiasm; but in a year he again set out for Italy, saam; but in a year he again set out for Italy, passing through Germany on his route. His "St. John in the Wilderness," and the monamental groups to Pius VII., Poniatowski, Maximilian of Bavaria, and Copernious, were among his greatest productions secured during his second residence in Itome. In 1838 his native government sent a frigate to convey him and his sculptures to Copenhagen, where he re-mained until 1841, in which year the delicate state of his health caused him to return to Italy. In 1842 he returned to Denmark once more, and continued to reside there until his death. In addition to the works already mentioned, a few others may be cited as those upon which his fame rests: these are,—the busts of the poets Holberg and Ochlenschlager, and the statue of Lord Byron; which latter was in-tended to be placed in Westminster Abbey; but tended to be placed in Westminst.r Abby; but on his return to France published his "impres-the necessary permission of the dean being sions de Yovage' in some papers on Hungary withheld, it remained in the Custom House and Walleachi which appeared in the "Revue during twelve years, until at length it found a des Deux Mondes." These papers first brought

place in the library of Trinity College, Cambridge. Thorwaldsen bequeathed almost the whole of his personal estate for the founding of a museum, which was to contain all his works, either originals or in casts, and to bear his name. This museum is one of the finest buildings in Copenhagen, and forms one of the chief attractions of the city. The Crystal Palace at Sydenham contains several casts from his works. D. at Copenhagen, 1770; D. 1844.

Thor, Jacques Auguste de, too, or, as he styled himself in Latin, "Thuanus," a celebrated French historian, was the son of Christopher de Thou, first president of the Parliament of Paris. He was designed for the acclesiastical state, and his uncle, the Dishop of Chartres, resigned some of his benefices in his favour; but he subse-quently relinquished this intention, and became quently relinquished this intention, and became a counsellor to the Parliament, and one of its presidents. Henry III. employed him on an eabassy first to Vienna and next to Vente; and Henry IV. admitted him into his councils, and engaged him in several important negotiations. His greatest work was the "History of his Own Time from 1845 to 1607," which is written in pure Latin, and with great fidelity. The best edition is that of London, 1738. His Latin poems were printed in 1611. B. at Paris, 1538; D. 1617.—
His son Pengols Aurents de Thon was libre. His son, Francois Auguste de Thou, was librarian to the king; but having been charged with participation in the conspiracy of Cinq-Mars, he was beheaded at Lyons in 1642.

THOUARS, Louis Marie Aubert du Petit, too'ar, an eminent French botanist, who came of a rich and noble family, and, at an early age, entered upon a military career; but his love of science and adventure led him to fit out a vessel in which he and his brother intended to go in search of La Perouse, the French navigator. On his way from Paris to Brest, where his ship lay, he was arrested by the revolutionists as an enemy to France, and thrown into prison at Quimper. In a short time he obtained his release; but his brother having sailed in the interim, he proceeded in search of him to the Isle of France, whence his brother had sailed before his arrival. Aubert remained in the island during ten years, amassing a large body of materials for the scientific works which he published after his return to France in 1802. Four years later he received the appointment of director of the royal nursery-ground at the French capital. His most important works were 'History of the Vegetation of the Islands of France, Bourbon, and Madagascar; "Essay on the Organization of Plants;" and "Miscellanies of Botany and Travel." B. in Anjou,

1756; p. at Paris, 1831.
Thouser, Michael Augustin, too'rai, a distinguished French physician, who became dean of the Faculty of Medicine at Paris. He proposed a successful plan for the removal of the cometery of the Holy Innocents at Paris, which, having long been used as the chief burial-ground of the French capital, had become a source of great unhealthiness. He wrote some valuable papers on medicine. B. 1748; p. 1810.

him into notice, and determined his future career as a diplomatist. In 1844 he became attached to the French Legation at Brussels, and shortly afterwards was chosen to go on a mission to Athens, where he remained several years. After the Revolution of February, 1848, he was sent as minister to Munich; and after the coup d'état of 1851, filled the position of political di-rector of the ministry of foreign affairs. In 1855 he was sent as ambassador to Constantinople, was made a senator in 1859, and in 1861 became minister for foreign affairs, which he held for

rather more than a year, when he was succeeded by M. Drouyn de Lhuys. B. 1818; D. 1966. THRASEA PARTUS, Lucius or Publius, thrat.

se-a pe'-tus, a Roman senator, and member of the priestly college, who was the only one in the senate courageous enough to avow his detestation of the murder of Agrippina by her son, the emperor Nero. This, and the popularity of Thrasea with the most honourable men among his contemporaries, caused him to incur the hatred of Nero, who, to get rid of him, incited Cossutianus, the enemy of Thrasea, to charge him with being an enemy to the state and to the emperor. The degraded senate decreed that the emperor. The degraded senate decreed that he should die, but allowed him to choose his mode of death. The decree was conveyed to Thrasea at his villa, and the senator caused the veins of both his arms to be opened. He was the author of a "Biography of Cato the Younger," which is lost, but is said to have been used by Plutarch in his "Lives." p. 66.

THRASYBULUS, thrus-e-bu'-lus, a celebrated Athenian general, who in the time of the Thirty Tyrants took refuge at Thebes. Having gained some followers, he marched against the usurpers and expelled them. In commemoration of this triumph, a yearly festival was instituted at Athens. Thrasybulus wisely procured the passing of a general amnesty, which decreed that no one but the principals should be punished for the atrocities which had been committed. He subsequently displayed great valour in Thrace, and slew the Lacedæmonian general with his own hand. Thrasybulus was surprised and assassinated in his tent by the people of Aspendas, a town of Pamphylia, 389 B.C.

THROCKMORTON, Sir Nicholas, throk-mor an English statesmen, who, in early life, became page to the duke of Richmond, natural son of Henry VIII. He subsequently served under the Protector Somerset in the Scottish campuirm, and was selected, in 1847, to convey to London the news of the victory gained over the Scotch at Musseburgh. He was in favour under Edward VI., who appointed him under-treasurer of the Mint, and bestowed upon him some valuable estates. After the death of Edward VI., he was charged with being implicated in the conspiracy of Sir William Wyatt, and imprisoned in the Tower; but, no being brought to trial, he so ably defended himself, as to gain an acquittal from the jury, despite the threats of the chief justice. He then retired to France, in order to avoid the persecutions to which, as a Protector Somerset in the Scottish campaign, order to avoid the persecutions to which, as a Protestant, he might be subjected under the reign of Mary. THULDEN, Theodore van, tool'-den, an eminent Dutch painter, who was the pupil and favourite of Rubens, and printed a great number of the works in the gallery of the Luxembourg. His manner so closely resembled that of his master, that a painting of his, "The Martyrdom of St. Andrew," contained in St. Michael's church at Ghent, was long thought to be the work of Rubens. His best works are the "St. Sobastian," in the church of the Bernardines at Mechlin; an "Assumption of the Virgin," in the Jesuits' church at Bruges; and a series illustrative of the life of St. John of Matha, in the ecclesiastical edifice belonging to the Ma-thurins, at Paris. He also excelled as an etcher, and reproduced forty-two designs by Rubens, commemorating the entrance of the Cardinalinfante Ferdinand into Antwerp. B. at Bois-le-Duc, 1607; p. at the same place, 1676.

THUMMEL, Moritz August von, term'-el, a German writer, who was, for a period, privy councillor and minister to Duke Ernest of Saxe-Coburg. He was the author of "Wilhelmine," a comic poem in prose; and "Travels in the Southern Provinces of France," which was highly praised by Schiller. It very much resembles the "Sentimental Journey" of Sterne, and is interspersed with several charming pieces of verse and some pleasing narratives. His complete works were issued in six volumes. THURLOW, Edward, Lord, an eminent English wyer, who was in 1754 called to the bar, and n the course of a few years rose to a high repuation in his profession. After being appointed ting's counsel, he entered Parliament, and was being contended in the decease against map or the strength of the distribution of the strength of the strength

Americans. This conduct caused him to gain the 14 A.D. Americans. Insconduct caused nim to gain the favour of George III., who during twenty rears evinced considerable personal regard for him. He was appointed solicitor-general in 1770 autorney-general in the following year, and in 1778 became lord chancellor, being at the same time created Baron Thurlow. He held the great seal during the four subsequent years, which formed the term of the North ministry and was, according to the king's desire, allowed to retain it in the Rockingham administration, which supplanted that of Thurlow's former colleagues. His opposition to the new cabinet was, however, so energetic and so clearly avowed, that his continuance in office was stoutly opposed by Mr. Fox. On the death of the marquis of Rockingham, Fox assisted Lord North to form a coalition ministry, and Thur-low, although the king desired that he might continue to keep possession of the great seal, was compelled to resign it. He, nevertheless, exercised a large share of influence in the national councils, as a member of that coterie termed by Junius "the king's friends." When Pitt became minister, in 1783, Lord Thurlow was again appointed lord chancellor, and retained the office during the nine succeeding years. At length, however, he, as formerly un-der the Rockingham ministry, began actually to oppose measures which Pitt had introduced into Parliament. Pitt informed the king that either himself or Lord Thurlow must refire; whereupon his majesty intimated to Thurlow that the great seal must pass into other hands. Thurlow, who had relied upon the king's friendship, was astonished at this communication, and was even bold enough to declare that "no man had a right to treat another as the king had treated him." He retired in 1792. Subsequently, on a few occasions, he voted against his former colleagues, and is understood to have been consulted on legal business by the royal family; but from this period until his death he exerted little influence on public affairs. An interesting account of an interview between himself and Sir Samuel Romilly, rcspecting the charges brought by Lady Douglas against the Princess of Wales, is to be found in the 2nd volume of "Romilly's Memoirs." n. near Stowmarket, Suffolk, 1732; n. at Brighton, 1808. THUROT, François, too'-ro, a French naval officer, who, having rendered himself con-spicuous by his courage and success while in command of a privateer, was invited to enter the royal navy, and intrusted with the command of five frigates and a correcte, destined to make a descent on the British coasts. He sailed on this expedition, Oct. 15, 1758, and arriving at Carrickfergus Bay, in Ireland, Jan. 10, 1760, the troops were landed, and the place surrendered in a few days. Thurch, tow-ever, soon re-embarked his troops; and, on his return to France, his vessels were attacked by an English squadron, and he was killed in the engagement, Jan. 20, 1760. B. 1727.

14 A.D. In his early years he commanded popularity by entertaining the people with magnificent shows and fights of gladiators. After distinguishing himself as a general in various parts, he was rewarded with four suc-cessive triumphs. At the height of his fame he suddenly retired to the island of Rhodes, where he remained during eight years. Returning to Rome. 2 A.D., he was invested with the command of the Roman armies in Illyricum. Pannonia, and Dalmatia, and seemed to divide the sovereign power with Augustus; at whose death, Tiberius, who was the step-son of Augusdeath, Therms, who was the step-son of Augus-tus, and had been adopted, assumed the reins of government. The beginning of his reign seemed to promise tranquillity to the empire. Tiberius, however, soon appeared in his real character. His ingratitude to his mother character. His ingratitude to his mother Livia, and his tyrannical oppression and murder of many noble senators, rendered him odious to the people. The armies mutinied in Pannonia and Germany; but the tumults were appeased by the prudence of the generals. He beheld the triumphs of Germanicus with jealousy, indeed dreaded the power of his general, whose death at Antioch was, as some suppose, accelerated by poison and the secret resentment of the emperor. Not only his relations and friends, but the great and opulent, were sacrificed to his ambition, cruelty, and avarice; and there was in Rome scarcely a single family that did not reproach Tiberius with the loss of a brother, a father, or a husband. He at length brother, a line of a missault. Her tengen retired to the island of Caprea, on the coast of Campania, where he gave himself up to infamous pleasures. The care of the empire was intrusted to his favourite Sejanus. Tiberius, on being made acquainted with the tyrannical measures of Scianus, ordered him to be put to death. (See SEJANUS.) Shortly afterwards he fell into a lethargy, which was mistale a for death, and Caligula, his favourite and the son of Germanicus, was proclaimed emperor. Tiberius, however, recovered; but Macro, the com-mander of the Pretorian guard, caused him to be suffocated. The character of Tiberius has been examined with particular attention by historians, and his reign is the subject of the most perfect and elegant of all the compositions of Tacitus. Like the rest of the emperors, he ractus. In the the rese of the emperors, received divine honours after death, and even during his life. He was a patron of literature and the arts, and was the author of some Greek poems. B. at Rome, 42 B.C.; D. near Misenum, 37 A.D.

TIMOTHEUS, a celebrated Athenian general, who was the son of Conon and the disciple of Isocrates. Placed in command of the Athenian fleet in 375 B.C., he, in order to avert an inva-sion of Thebes by the Lacedamonians, took Corcyra, Cephalonia, and Arcunia. He was a second time nominated admiral of a fleet of sixty ships: but his enemies having been able to produce a strong feeling against him at Athens, he was recalled. He was brought to trial; and although his innocence of the charges urged against him was well established, he was only liberated through the interference of Alcetas the Molossian, and Jason of Pherm. In 361 B.C. he again held a naval command, and proceeding to the Heliespont, captured several towns. A reconciliation took place between him and his rival Iphicrates, in 357 B.C. The two commanders sailed to reduce Samos and the other rebellious allies of Athens; but the expedition proving unsuccessful, the Athenians were compelled to conclude a peace, which brought to a termination the Social War. Timotheus and his colleagues were subsequently accused of having taken bribes from the Chians and Rhodians. He was fined 100 talents, which heing unable to pay, he retired to Chaleis, in Euboa, where he died, 354 n.c. for life, being called, in consequence, Timurienk, "lame Timur," which term has been corrupted by the Europeans into Tamerlane. He next subdued the whole of ancient Persia, and then took Bagdad. Flushed with his success. he marched into India, where he took Delhi, the capital, and thus gained possession of immense treasures. But while he was engaged in this expedition, Bagdad revolted; on which he hastened back, delivered the city up to pillage, and put to death 90,000 persons. He also invaded Syria, and took Damaseus. During this successful career the Greek emperor and some inferior princes implored his assistance against Bajazet, emperor of the Turks. Tamerlane sent to him to withdraw from before Constantinople, and to replace the princes whom he had deposed. Bajazet returned a fierce answer ; on which Tamerlane marched against him, and, after a battle of three days, the Turkish emperor was defeated and taken prisoner. Different and very irreconcilable accounts are given of the conqueror's treatment of his captive. Some assert that he was confined in an iron cage, and exposed to scorn and contempt; while others relate that Tamerlane behaved to him and his family with the greatest liberality. The last account appears to be the best founded. Tamerlane fixed the seat of his vast empire at Samarcand, where he received the homage of numerous sovereigns, and, amongst the rest, the ambas-sadors of the emperor Manuel Palwologus and Henry III., king of Castile. Having resolved to make the conquest of China, he set out with this army, but died on the march. Ruskin, bit word the state of the stat his most enthusiastic admirer, speaking of these changes of manner, says: "There has been a marked and constant progress in his mind; he has not been like some few artists, without childhood; his course of study has been as evi-dently as it has been swiftly progressive; and in different stages of the struggle, sometimes one order of truth, sometimes another, has been aimed at or omitted. As he advanced, the previous knowledge or attainment was absorbed in what succeeded, or abandoned only if incompatible, and never abandoned without a gain; and his last works present the sum and perfection of his accumulated knowledge, delivered with the impatience and passion of one who feels too much and knows too much, and has too little time to say it in, to pause for expression, or ponder over his syllables." Of a reserved and unsocial disposition, he stood aloof from artistic and other society, and, during his lifetime, it used to be said that he was absorbed with a love of money. After his decease, how-ever, it was found that he had bequeathed the whole of his pictures and drawings to the nation, and, as he had been in the habit of repurchasing the best of his earliest works as they came to be offered for sale, and had, moreover, refused, for years before his death, to part with his finest productions, the gift was indeed a munificent one. His funded property he left to be applied to the purpose of founding an asylum for decayed artists at Twickenham. The will having been, unfortunately, informal in several respects, a chancery suit was the result; but the matter was compromised by his next of kin taking the engravings and other property; one hundred of his finest oil paintings, and several hundred of his mest oil paintings, and several hundreds of drawings and sketches, becoming the property of the nation. These last were arranged for exhibition by Mr. Ruskin, and, together with his pictures, they may be viewed at the Galley of British Art, in the South Kensington Museum. Romish church. D. 1164. VICTOR, St., of Marseilles, had served in the army of the emperor Maximian; but, having embraced Christianity, suffered martyrdom about 303.

VICTOR, St., Adam of, a celebrated hymnologist who flourished in the 12th century, and is supposed to have been a native of England. After passing some time at Paris, he entered the monastery of St. Victor, where Thomas a Becket resided during his retirement from

England. D. about 1192.

VICTOR, Claude Perrin, Duke of Belluno, and marshal of France, enlisted as a private soldier in an artillery regiment in 1781, and at the outburst of the revolutionary wars, having greatly distinguished himself, was created chef-de-bataillon, in which capacity he served, in 1793, at the siege of Toulon, where he commanded the party that captured Fort l'Aiguillette. Promoted to the rank of general of brigade, he was sent to the army of the Eastern Pyrenes, was sent to the army of the Eastern Pyrenes, where, as subsequently in Italy, he exhibited great bravery and skill. Attracting the notice of Bonaparte, he was appointed second in com-mand to Lannes in the campaign in the Papa! States. His next important command was in La Vendée, which country he, by his skilful policy, succeeded in restoring to tranquillity. Recalled to the army of Italy, he gained fresh renown by his conduct while covering the re-treat of the French army of Naples at Marengo and at Bassano. At the peace of Amiens he was appointed by Napoleon ambassador to the court of Denmark; but upon the commencement of the war with Prussia, in 1806, he was recalled to his military duties. At Jena he par-ticularly distinguished himself, as also at Pultusk; while at the battle of Friedland his valour was so conspicuous, that Napoleon created him, upon the spot, marshal of France. In 1807 he held the governorship of Berlin. In the following year he was sent to Spain in command of the first corps of the French army, and, after twice defeating the Spaniards, was sent to co-operate with Soult in Portugal. He, however, suffered a defeat at Talavera, and, in 1812, was recalled from the Peninsula to take a command in the grand army about to invade Russia. In that terrible campaign his valour was conspicones; and at the passage of the Beresina, he held in check the pursuing Russians, and saved a large number of his fellow-soldiers, who would otherwise have fallen into the power of the enemy. During the campaign of 1813, he evinced his accustomed bravery and skill, in checking, as far as possible, the advance of the allies into France; but having failed to dis-lodge the enemy at Montereau, he incurred the displeasure of the emperor, who took from him his command. This act of injustice deeply moved the brave marshal, who declared that he would not quit that army, and, as he had already served as a private soldier, he would again take his place in the ranks. Napoleon, appreciating his fidelity, gave him the command of a portion of the guard, with which he

fought, with the most stubborn courage, at the battle of Craonne, and was carried off the field severely wounded. After the abdication of the emperor, he gave his adherence to the Bourbons, and was appointed to a command. subsequently evinced much bitterness against Napoleon and Marshal Ney, and refusing to follow the example of most of the other captains of Napoleon, by rejoining his standard after the return from Elba, he ratired, with Louis XVIII., to Ghent. In 1321 he became minister of war, and, in 1823, acted as second in command in the Spanish campaign. After the Revolution of 1830 he became one of the leaders of the legitimist party; but took little part in public affairs. One of the bravest com manders of the Imperial armies, his fame was principally owing to the bold and able manner in which he executed managuvres set down for him by a higher authority. He usually failed when holding an independent command. His treatment of the sick and wounded English soldiers in the town of Talavera reflects great credit upon his humanity. n. at La Mauche, 1766: D. 1811.

VICTOM AMIDETS I., a-mai-de-ms, Duke of Savoy, was brought up at the Spanish court, whence, in 1611, his father recalled him, to assist in the campaign against France. He succeeded his father in the dukedom of Savov in 1630, and in the following year obtained Montferrato and Alba. He was compelled by Cardinal Richelieu to become the ally of France against the Spaniards, over whom he obtain? ! several advantages. His wife was the daugh .. r of Henry IV. of France. He built the university of Turin, and provided it with several distri-

or runn, and provided it with several distri-guished professors. B. at Turin, 1587; D. 1637. Vicros Amadeus I., the first king of Sar-dmia, succeeded his father as duke of Savoy in 1675. He joined Spain and Austria against France; on which Marshal Catinat was sent against him, and the French gaining a great victory at Staffarda, nearly subdued the whole of Savoy. Victor-Amadeus, on the other hand, entered Dauphiny, and made himself master of some strong places, which, however, he was solite strong piaces, which however, he was obliged to abandon, and to sue for peace. In 1701 he again engaged in hostilities with France, having been promised by the emperor a considerable accession of territory. The duke de Vendôme took possession of a considerable part of Savoy, and the French laid siege to Turin, which was relieved by Prince Eugene. In 1713 Victor recovered the whole of his territory, and was, by the treaty of London, acknowledged king of Sardinia. In 1730 he abdicated the throne to his son; but, repenting of what he had done, endeavoured to recover the crown. In this, however, he failed, and after remaining during some time under arrest, was compelled to retire to his private residence at Moncalieri. He was famous both as a general and statesman; he gave an impulse to trade and manufactures in his dominions; encouraged the cultivation of the mulberry-tree and the breeding of silkworms; thus laying the founda-tion of that branch of commerce in Piedmont. tion of that branch of commerce in Fedinini.

As duke of Aosta he opposed a energetic resistance to the French revolutionary armies: and, upon his father, Victor Amadeu II., concluding a treaty of peace in 1796 with Bonaparte, he withheld his acknowledgment o it, and retired to the island of Sardmia. Whe his brother, Carlo Emmanuel II., abdicated i 1802, he succeeded to the crown. By the treat of Paris, in 1814, Nice and a moiety of Savo were restored to him. The remaining portion: of Sayoy and Genoa were subsequently added to his dominions. p. at Moncaglieri, 1824 VICTOR EMMANUAL II. (I. of Italy) was the

son of Carlo-Alberto, and fought in the campaign against the Austrians, which, ter minating in the disastrous battle of Novara caused his father to abdicate. He became king in 1849, under the most unfavourable circum stances. He had to avert the consequences of & disastrous war, to allay faction, and to preserve the constitution, to annul which, it is stated Austria attempted to bribe him with the offer of Parma. After securing the services of emi nent statesmen, and chiefly of the illustrious Cayour, he uncertook the complete organization of the finances, the army, the system of public of the finances, the army, the system of paone education; concluded with England a treaty of commerce, and obtained a treaty of peace from Austria upon comparatively easy terms. Although threatened with excommunication by Rome, he persevered in granting the blessings of religious liberty throughout his dominions, In 1855 his monarchy acquired additional consideration in consequence of the convention signed with England and France, by which his troops became the comrades of the allied armies in the Crimea. At the battle of the Tchernaya the Sardinian soldiers behaved with the greatest bravery, and it became generally known that the military organization of Sardinia was of the most complete character. In 1855 he paid a visit to the English court, and received an enthusiastic reception from the English people. His daughter, the Princess Clothilde, was given in marriage to Prince Napoleon, cousin of the emperor of the French. In 1859, after a series of sanguinary engagements, in which the Austrians were defeated by the allied French and Sardinian troops, and in which the bravery of Victor-Emmanuel was conspicuous, the Austrians were driven from Lombardy, which state was annexed to the Sardinian crown, In 1860 the grand-duchy of Tuscany, the duchy of Parma, and other important states of the Italian peninsula, voted for their annexation to the territories acknowledging the sway of the Sar-dinian monarch. Sicily, Naples, as well as several provinces of the Papal States, also rose against their tyranutcal musters, and these fair countries were enabled, principally through the courageous conduct of the patriot Garibaldi, to become an integral portion of that constitutional monarchy which, with Victor-Emmanwel II, at its head, may eventually include the whole of the Italian peninsula, from "the Alps to the 1058

Adriatic." After the annexation of these provinces to his crown, Victor-Emmanuel assumed the title of King of Italy, a designation which was generally acknowledged by the other nowers of Europe. In 1866, after the "Seven Weeks War," Venice was added to the Italian dominions. B. 1820.

"From the earliest age," says a standard work on biography, "the young princess was taught to seek health by exercise and temperance: to acquire fearlessness even from her amusements, such as riding and sailing; to practise a wise economy, united to a discriminating charity; to cultivate a self-reliance that should render her independent of and superior to mere favourites and flatterers." She became accomplished in music and languages; a knowledge of the sciences, particularly botany, was afforded her: while a complete acquaintance with the principles of the English constitution was obtained by her under the tutorship of Viscount Melbourne. On June 20, 1837, she ascended the throne of the United Kingdom, the duke of Cumberland becoming king of Hanover, in virtue of the law which excludes females from that throne. By this act, the connexion between the crowns of England and Hanover was brought to a termination, after having existed during 123 years. On February 10, 1840, the queen became the wife of Prince Albert-Franz-August-Karl-Emmanuel, second son of the duke of Saxe-Coburg-Gotha. bater, whom he assisted in the barness during his 13th year, when he commenced piltering the stock, money, and silver forks and spoors. Detected in these acts, he was sent to prison, and while there he, with another boy-prisoner, planned a more extensive robbery of his parent's property. Shortly after his release, he abstracted the whole contents of the family eachbox, amounting to £80, which he shared with his companion, and started off from his native town for Ostend, with the intention of taking a passage in a vessel bound for America; but, falling in with a sharper, he lost the whole of his ill-acquired money. Thus reduced to a destitute condition, he entered the service of the proprietor of a travelling menageric, who at first employed him in attending to the enimals, and afterwards as an aerobat. He was, however, discharged from this situation in consequence of his refusal to perform the part of a savage who was to devour raw ilesh. next found a master in the keeper of a puppetshow, whom he quitted to assist an innerant quack doctor. He led this vagrant life during two years, when, through the kind offices of an old priest, he was allowed to return to his father's roof. Unable to remain long at the regular work of his father's business, he enlisted in the army, saw some service, was made a corporal, but having quarrelled with and challenged the drum-major of the regiment, he, to avoid the consequences, deserted, and entered another regiment, with which he was present at the battle of Gemannes. Again deserting, he went over to the Austrians, but afterwards contrived to re-enter France. For the third time he became a soldier, and being wounded, was sent to his native place. He there married, left his wife almost immediately afterwards, became a gambler at Brussels, made love to and gained the affections of a countess, and was on the eve of being married to her, when, con-fessing that he already had a wife, he was rewarded for this, perhaps his first honest act, with a large sum of money; whereupon he repaired to Paris. But his gains were soon dissipated at the gambling-talle, and, after a variety of strange adventures, he found himself convicted of forgery, and sentenced to eight years' penal servitude at the galleys. In the 6th year he effected his escape, obtained employment as an usher in a selvool, was recap-tured, sent to Toulon, and again got free. Vinera, Publius Maro, vir'-jil, an illustrious Roman poet, whose earliest years were spent at Cremona: whence he removed to Rome, when his estates were partitioned out among the soldiers after the battle of Philippi. There, by means of his friend Museenas, he was intro-duced to Augustus, who restored to him his "Eclogue;" and, on completing the "Bucoles," he undertook the "Georgies." After these, he commenced the "Eneld" at the request of the commencent the Edited. A the request of the emperor angustus. This great poem is composed upon the model of the "Iliad," and relates the adventures of Eneas after the destruction of Troy. The poet was engaged during eleven years upon this immortal work, but died without revising it. He left the greatest part of his property to Mescogas, Tucca, and Augustus. His remains were interred on the road leading from Naples to Puteoli, and this epitaph, said to have been composed by himself, was inscribed on his tomb :- Mantua me genuit ; Calabri raon his time.—Zandae he genacy coeins passua, puere; tonet name Parthenope; ceeins passua, rura, duces. ("My birthplace Mantan; in Calabria death overtook me; in Naples now I lie. I've sung of shepherds, fields, and heroes' dec. I ve sting of snepherus, netus, and nerved decels.") A completent authority declares that, "though the 'A neld' contains many fine pas-sages, its potted merits are greatly below the 'linad' and 'lowsey'... and it is delicient in the truth and simplicity which so contently characterize those poems." The best editions of Virgil are those of Heyne and Wagner, Leipof vigil are those of freyne and Wagner, Leip-zic, 1842, Forbiger, and Robert Stephens. After entering Calcutta, proposed to the government there a plan for steam communication between England and the East Indies. Repairing to England, he made known his project to the authorities of the Post-Office, the Board of Control, and the Court of Directors; but found it opposed in almost every quarter. Obtaining the patronage of Lord Ellenborough, he was permitted to carry government despatches for the governor of Rombay through Egypt, and, although he en-countered an unusual number of difficulties, he completely succeeded in his mission. With the assistance of the Bombay Steam Committee, he commenced the establishing of the overland route, built hotels and halting-places in the desert between Cairo and Suez, and placed steamers upon the Red Sea. Between the years 1831-34, he superintended the entire working of the overland route himself. After the go-vernment had taken up the idea, he continued to explore other routes than that through France, and, in 1847, found that journeying by Trieste effected a saving of thirteen days. Unfortunately, he lost all his property in the pro-secution of the Trieste route, and, as a still greater misfortune, his health gave way under the anxiety of mind consequent upon his great labours. Wallenstein, Albert Wenceslaus Eusebius, val'-len-stine, duke of Mecklenburg, count of Waldstein, a celebrated Imperialist general, was the son of Wilhelm von Waldstein, a Bohemian baron. Although born a Protestant, his uncle and guardian sent him to be educated under the Jesuits at Clmütz, where he was converted to the Roman Catholic faith. Leaving Olmutz, he proceeded to Italy, where he acquired a knowledge of astronomy, the Roman and German law, and was well grounded in the uncient and modern languages. His first military service was in Hungary, where he signalized hum-self at the capture of Gran from the Turks by the Imperialists. After rendering assistance to the emperar Ferdinand II, both by lending him money and as a successful commander of his army, he received, upon the deposition of Frederick of Bohemia, immense estates in the con-quered country. His great wealth, his fame as a commander, and his high rate of pay, attracted to his standard military adventurers from almost every country in Europe. In concert with Tilly he gained a number of successes, defeated Mans-teld, and brought to a glorious termination the campaign of 1626. In the following year he took the field at the head of 50,000 men, with whom he marched from Silesia to Denmark, foreing Christian to cross the Belt, and thus save the remainder of his army. At the conclusion of the Danish war he received the duchies of Mecklenburg as a reward for his services. Wallenstein was further created admiral of the Baltic and the German Sea, and taking up his residence at Wismar, conceived the idea of forming a navy for the purpose of resisting the designs of Gustavus Adolphus of Sweden, which his superior penetration had enabled him thus early to discern. He also wrote to his imperial master, "I beg of you, sire, to observe well this Swede, for he is a dangerous fellow." But the honours which had been heaped upon the vic-torious general raised up against him a number of powerful enemies near the emperor's person. At the head of this conspiracy to effect the downfall of Wallenstein were Tilly and Duke Maximilian of Bayaria, who urged the emperor to dismiss the "dictator." Yielding at length to these intrigues, Ferdinand dismissed Wallenstein, who retired to his estates in Bohemia. Gustavus Adolphus invaded Germany almost Gustavis Aconstant armost immediately afterwards; the imperial armies were worsted at Leipsie; Bavaria was conquered by the Swedes, and Tilly was killed. The mperor, to avert the ruin of his country, turned to Wellenstein, who however would not for an insult offered to him, Wallace fled to the turned to Wellenstein, who however would not woode, and was outlawed. exacted from Ferdinand the most exorbitant conditions. In a short time he forced Gustavus Adolphus to evacuate Bavaria, pursued him into Saxony, but lost the battle of Lützen, which disaster was, nevertheless, more than compensated by the death of the great Swedish king, who fell in the fight. In 1633 he was commanded by the emperor to winter in Lower Saxony; but Wallenstein refused to obey. Hereupon, his enemies at the imperial court Hereupon, his enemies at the imperial course urged Ferdinand to get rid of his haughty lieutenant. Wallenstein learning that the emperor was preparing to deprive him of his command, announced his intention of resigning; but his officers entreated him to remain at their out his omeers entreated min to remain at their head, signing the celebrated declaration of Pilsen, by which they bound themselves to remain faithful to his fortunes. This act was remain memor of his foremess. This act was represented to the emperor as a conspiracy against his person and power. He therefore signed an edict declaring Wallenstein a robel, and gave secret orders to Piccolomini and Gallas to take him dead or alive. Meanwhile, Wallenstein sent two officers to the emperor with his offer of resignation; but his messengers were prevented from obtaining an interview. Water approach of Piccolomini and Galles, Wallenstein, ofter requesting an asylum with the Swedes, which was refused, took refuge with a small band of his faithful adherents in the castle of Eger, the commandant of which. Gordon, treacherously put him to death with his most devoted friends. In 1834 Dr. Forster published a work, written from materials supplied by the private military archives of Vienna, in which he proved that Wallenstein was com-pletely innocent of the charge of conspiring against his sovereign. p. in Bohemia, 15%; killed, 163%. Soon afterwards Warwick invaded England; and Edward IV, having fled to Holland, he proclaimed Henry VI., who had been released from the Tower, king of who had been released from the lower, king of England. The earl was appointed chamberlain and lord high admiral of England. But in 1471 Edward IV., assisted by the duke of Bur-gundy, landed in Yorkshire, and gathering together an army, met the Lancastrians, under Warwick, at Barnet, when they were totally decated, Warwick perishing in the fight. WASHINGTON, George, wosh'-ing-ton, the celebrated American patriot, was descended from a family which had gone from Northannton, in England, to settle in Virginia. His father, Mr. Augustine Washington, a man of considerable landed property, died when George, who was his claest son by a second marriage, was in his lith year. His education, obtained at an ordinary school, comprised little more than reading, writing, and arithmetic; but be-tween his 14th and 16th years he studied geo-metry and surveying, in which he made con-siderable progress. In his 16th year he left school, and having devoted his attention to mathematics and practical surveying, was employed by Lord Fairfax to survey his property in the Alleghany Mountains. In his 19th year he was appointed major in the provincial militia, in which capacity he was sent by General Dinwiddie, in 1753, to the French commander on the Ohio, to complain of the inroads that had been made, in violation of the treaties between the two nations. About this time he came into collision with, and defeated, a small detachment of the French forces, for which he was thanked by the House of Burgesses. In 1755 he served as colonel under the unfortunate General Braddock; on which occasion he exhibited proofs of his military courage and skill, particularly in conducting the retreat of the army, after the disastrous battle of Mononga-hela. He held the command of the Virginian troops till 1753, when he gave in his resigna-tion on account of ill-health. He next served his country as a senator. When the breach between Great Britain and her colonies became widened by mutual animosity beyond all proswidened by muttas animosity beyond an pros-pect of reconciliation, the eyes of his country-men were fixed upon Washington; and accord-ingly, in June, 1775, he took the commant of the army of America, at Cambridge, in New England. The particulars of that great revo-lution it is impossible here to give in detail.

The history of Washington, from this period, The history of the American war, and must necessarily be voluminous. Suffice it to observe, that he created the American army; with the assistance of French forces, fought the English generals Howe, Clinton, Burgoyne, and Cornwallis, with various results; till, finally, he invested Cornwallis in Yorktown, and caused him to capitulate. To his intrepidity, prudence, and moderation the Americans were almost wholly indebted for the independence which was secured to them by the treaty of peace concluded in 1783. Soon after this event, Washington resigned his commis-sion to Congress, and in his address on that occasion, the magnanimity of the hero was blended with the wisdom of the philosopher. He returned to his seat at Mount Vernon, like Cincinnatus, and set himself to complete those favourite improvements in agriculture which had been suspended. In 1789 he was elected as the president of the United States. His government was marked by that well-tempered prudence which distinguished all his conduct. Having been re-elected as president, he held office till 1707, when he again retired to his estate at Mount Vernon. One of the most satisfactory estimates of the character and intellect of the American patriot is that of President Jefferson, who says, "His mind was great and powerful, without being of the very first order; his penetration strong, though not so acute as that of a Newton, Bacon, or Locke; and, as far as he saw, no judgment was ever sounder. It was slow in operation, being little aided by invention or imagination, but sure in conclusion. Hence the common remark of his cers of the advantages he derived from

councils of war, where hearing all suggestions, he selected whatever was best; and certainly no general ever planned his battles more judiciously; but, if deranged during the course of action, if any member of his plan was disarranged by sudden circumstances, he was slow in a readjustment. The consequence was, slow in a readjustment. I the consequence was, that he often failed in the field, and rarely against an enemy in station, as at Boston and York. He was incapable of fear, meeting personal danger with the calmest unconcern. Perhaps the strongest feature in his character was prudence, never acting until every circumstance, every consideration, was maturely weighed; refraining, if he saw a doubt; but, when once refraining, it he saw a doubt; but, when once decided, going through with his purpose, whatever obstacles opposed. His integrity was the most pure, his justice the most infertible, I have ever known; no motivos of interest or consunguinity, of friendship or hatred, being able to bias his decision. He was, indeed, in every sense of the word, a wise, a good, and a great man. His temper was naturally irritible and high-toned; but reflection and resolution had obtained a firm and habitual ascendance over dancy over it. dancy over it. . . . His person was fine, his stature exactly what one could wish. Alhough in the circle of his friends, where he might be unreserved with safety, he took a free share in conversation, his colloquial talents were not above mediocrity, possessing neither copiousness of ideas nor iluency of words. In public, when called on for a sudden opinion, he was unready, short, and embarrassed. Yet he wrote readily, rather diffusely, in an easy and concert style. He read little, and that only in agriculture and English history." B, at

nanician, and the great improver of the steamngine. It is related of him that he was "no ommon child;" in his 6th year he solved a cometrical problem; when he had attained is 14th, his mind was continually occupied with the prosecution of experiments in natural hilosophy. According to Arago, the celebrity which was to become attached to his name as he improver of the steam-engine was foreshadowed in his earliest youth, it being cusomary with him to sit watching the exit of steam from the mouth of a kettle, and to exuse of a teacup as a condenser. Under the paternal roof he acquired considerable skill in making and repairing the astronomical instruments used by mariners, his father vending those and other articles to the owners and cap tains of shipping in the port of Greenock. In his 18th year he went to Glasgow, where he resided during a year, and then proceeded to London, in order to acquire some better instruction in his business of mathematical instrument-maker than could be obtained in scotland. He obtained an introduction to some eminent makers, and so assiduous was his application, that in a year he was enabled to write to his family "that he could construct a brass sector with a French joint, which is reckoned as nice a piece of framing work as is in the trade." In 1756 he returned to Glas-gow, where, under the patronage of the university, he set up in business. It was not alone as an expert and able artificer that he won the attention of the scientific gentlemen of Glasgow; he was likewise an accomplished natural philosopher. His leisure was also devoted to mathematical inquiry, and to the acquisition of the German and Italian languages. Having, during many years, earnestly investigated the properties and powers of steam, chiefly with the view of applying it to the moving of wheel carriages, he began his immortal discoveries by improving Newcomen's steam-engine. He invented a means of condensing the steam in a separate chamber, and devised a plan, remarkable for its ingenuity and simplicity, by which he was enabled to obtain a high and uniform temperature in the cylinder. Between the years 1765-60 he continued his improvements, taking out patents for the most matured of them. He had some time previously occupied himself with surveying and civil-engineering work; and having given up his instrument-making business, resolved to make these chosen in 1764 to fill the chair of cibevistry, avocations his pursuit; accordingly, he was and in 1771 succeeded to that of divinity. devise improvements in the navigation of the Clyde, the Crinan canal, as well as in the har-Clyde, the Grinal chinal, as wen as in the nat-bours of Port Glasgow, Greenock, and Ayr. Barly in the year 1774 he entered into purtner-ship with Matthew Boulton, in whose great factory at Soho he found those facilities which were requisite to enable him to perfect and manufacture his improved steam-engines. The energy and business talents of Boulton were also admirably calculated to smooth away the obstacles which stood in the way of the extensive introduction of the new engines. The narrow limits of this notice will not admit of a detailed account being given of all the progressive imaccount term given of an the progressive in-provements made by the mechanical genius of Watt, aided by the commercial tact of his partner; it will suffice to say, that, after twenty years of enlightened activity, the splendid result of his labours-the perfect machine -was produced. By the year 1800, at which time he retired from business, the steam-engine was in general use throughout the United Kingdom. Among the less-claborated inventions which emanated from him may be cited the copying-press; a steam-drying machine; im-provements in bleaching, principally derived from the great French chemist Beriholict; and a machine for copying sculpture, which list was matured after he had entered his 80th year. He revised and annotated the articles "Steam" and "Steam-engine" for the "Encyclonædia Britannica," and was the author of a valuable mass of correspondence relative to his wandon mass of correspondence relative to make the different inventions, which was published by his relative, James Patrick Murrhead. By many of the most competent judges Watt has been admitted to have been an original and enlightened speculator upon the true theory of the composition of water, a discovery which has also been claimed for Lavoisier and Cavendish. In an eulogium upon Watt by Lord Jeffrey, the writer observes, "It was by his inven-tions that the action of the steam-engine was so regulated as to make it capable of being applied to the finest and most delicate manufactures, and its power so increased as to set weight and solidity at defiance." Watt was a member of the Royal Societies of London and Edinburgh, a correspondent of the French Institute, and was enrolled among the associates of the Academy of Sciences at Paris. A statue to his memory was set up in Westminster Abbey in 1824. Statues in his honour have likewise been erected at Manchester, Glasgow, and Greenock. In the eloquent words of Lord Brougham, he was one "who, directing the force of an original genius, early exercised in philosophic research, to the improvement of the steam-engine, enlarged the resources of his country, increased the power of man, and rose to an emineut place among the illustrious followers of science and the real benefactors of the world." Wart, James, son of the preceding, distinguished himself as a constructor and improver of engines for steam navigation. He gave some assistance to Fulton, who afterwards introduced steam navigation into America; and, in 1817, made a voyage to Holland on board a steamer the engines of which were manufactured at the Soho works, of which he was at the head. This was the first steam-vessel that had left an English port. He was the author 1077

The governorgeneral acex turned his attention to the finances and the general internal organization of the Indian Empire. The turbulent Mahrutas were afterwards defeated in a series of sanguinary encounters, and their power completely broken by the decisive battles of Assaye and Lassawarree. In these campaigns, the marquis's brother, Major-General Wellesley, afterwards duke of Wellington, displayed military qualities which formed a true augury of his future leil-

He remained out of office between this date and the year 1821, having, in the meanwhile, had frequent occasion to condemn the inefficient manner in which his brother was supported in the Spanish campaigns by the supported in the Spanish Campagns of English ministry. During nearly seven years he held the appointment of lord-lieutenant of Ireland, and in 1833, five years after his resignation. nation of it, was re-appointed, holding the office, on this second occasion, for about a year. His last public employment was in the second ministry of Lord Melbourne, in which he held the appointment of lord chamberlain. Marquis Wellesley was a statesman of enlarged views, and with superior talent for organization; but for party politics he had little sympathy. Like others who had held the post, his administration of the East Indian empire was bitterly attacked by his political opponents. But the measures which he inaugurated while ruling in the East ultimately proved as productive of real good as his career was brilliant while he held the government there. His despatches, minutes. and correspondence, during his administration of India, were published by Mr. Montgomery Martin in 1836; n. at Dublin, 1760; n. in London, 1842.

Wellington, Arthur Wellesley, Duke of, eef-ling-lon, an illustrious British military commander and eminent statesman, was the third son of the earl of Mornington, by Anne, daughter of Arthur Vissoumt Dungamon. The family name was originally vissley, which had been assumed by the duke's grandfather, Kichard Colley, Esq., on succeeding, by bequest, in 1728, to the estates of Garret Wesley, Esq. of Dangan Castle, in the county of Meath, Ireland, As Arthur Wesley, Or so he continued to style himself until 1737, at which time the paternal designation was canaged to Wellesley by the first marquis, he received his education at Eton college, alterwards from a private tutor at Eton college, alterwards from a private tutor at Brighton, and fimally at the military academy of Angers, in France. He obtained his first commission as ensign in the 73rd regiment of foot in 1737; at the closs of the same year he became licutemant in the 76th; early in 1778 he coschanged into the 18th, and in June of the same year was gazetted to the 12th light dragons. Promoted to a captainey in the 58th foot in 1791, he, in the following year, exchanged into the 18th light dragons. In 1793 he was appointed major of the 33rd foot; and, after progressing the borough of Trim, in the county of Meath, in the Irish Parliament, and after-presenting the borough of Trim, in the county of Meath, in the Irish Parliament, and after-presenting the upon his first active service as lieutenaut-colouel of the 33rd regiment, having been ordered to join the forces of the duke of York in the Netherlands. The Linglish were, however, compelled to retire before the French army under Pichegru, and in the following year, after several disasters, he embarked for England. His regiment was next ordered to the Westmorchand, the should be about which it was regiment, and the should be about which it was regimented, after experiencing some bad weather at a st, a was compelled to retire before the French army under Pichegru, and in the following year, and the state of the sta

mouth, and in the following year the destination of the force was changed to that of India, Meanwhile, Wellesley had become a colonel, and in 1797 he landed in India with his mend His career may be said to have commeadured the most favourable auspices; for, in 1798, his closs brother arrived at Calcutta as governor-general of India. Tippoo Sails, subm of Mysore, was intriguing with France and the Mahrattas to expel the English from India; Mahrattas to exper one mights from india; the governor-general, accordingly, after some fruitless attemps at conciliation, resolved to crush the disafficted native princes. An army, under General Harris, was ordered to enter the territory of Mysore, Colonel Wellesley's regi-ment forming part of the force. The Nizam of the Decean supplied a contingent to the British and the command of this portion of the army was given to the brother of the governor-general. After defeating Tippoo's troops at Malavelly, the British marched upon Scringapatam, which was stormed and taken, the sultan being killed in the fight. In 1799 Wellesley was nominated governor of Seringapatam and of Mysore; in which position he highly dis-tinguished himself, both in the field and as an administrator. In 1803 he fought and gained an administrator. In 1843 he tought and gained the splendid victory of Assaye, where, which 8000 men, he deferted the forces of Schidia, mounting to 30,000. He next compelled the rainh of Berar to sue for peace. The following year he repaired to Bombay, where an address was presented to lim, in which he was styled as equally great in the cabinet and in the field: from the British residents at Calcutta he re-ceived a sabre worth £1000, whilst the army of the Deccan subscribed to present him with a service of plate of the value of 2000 guineas: and, having received the thanks of both houses of Parliament, and been knighted, he, in 1805, set sail for England. Towards the close of the same year, he was appointed to the command of a brigade in the German expedition under Lord Catheart; but in a few months the English returned, without having been engaged with the enemy. In 1806 he married Lady Catherine Pakenham; in 1807 he became secretary for Pakenham; in 180/ ne necame secretary no Ireland, was elected to the House of Commons, and, in the same year, participated in the Copenhagen expedition as brigadier, his division routing the Danes at Kinge, which from fell into his hands. Returning to England shortly for morals hands. afterwards, he resumed his seat in the House of Commons, and his post as secretary for Ireland. In 1803, having been made lieutenant-general and given the command of the army to be despatched to the Peninsula, the great drama of his life was about to commence. In July of that year he landed at Corunna; but, finding that the junta of Gallicia asked for money and not men, he changed his plans and sailed for Portugal, where he disembarked his troops at Fortugal, where he distinuance his troops as Mondago Hay. On receiving a reinforcement of 4800 men, under Major-General Spencer, from Cadiz, Sir Arthur Wellesley, with about 18,000 men in all, prepared to attack the French under Junot, who had with him 14,000 troops. Sir John Moore had likewise landed in Portugal, with the view of effecting a junction with Wellesley, who, however, resolved to strike a blow without waiting for his reinforcements. He marched towards Lisbon; but was superseded in the chief command by Sir Hew Dairymple and then by Sir Harry Burrard, who had been sent gut from England. This general was mild

and cautious to a fault; and, despite the urgent representations of Wellesley, who declared that if the English did not attack Junot, Junot would attack them, he refused to act until Sir John Moore had come up. At Vimiera the French, as Wellesley had predicted, fell upon the English, but were gallantly repulsed, and would certainly have been cut off from Lishon, were it not for the blundering tactics of Burrard. The Convention of Cintra was afterburratt. The convention of Cintra was after-wards concluded, by which the French agreed to evacuate Portugal, Junot and all his troops and baggage being conveyed in English transports to the nearest French port. In disgust and disappointment Sir Arthur Wellesley reincompetent generalship of Burrard and the diplomatic incapacity of those who had allowed Junot to retrieve by treaty what he had lost in the field. An inquiry took place; and although everybody was admitted to have acted with zeal, firmness, and gallantry, the superi-ority of Wellesley as a commander, over the higher officers, was apparent, though it was not publicly avowed by those in authority. Accordingly, when, in 1809, Napoleon, after having burst into Spain, had occupied Madrid, and after Soult had marched against Sir John Moore with an overpowering force, the English nation became aroused, it was not to a Burrard or a Dalrymple that the command of the British forces was intrusted. The national enthusiasm demanded that a great blow should be struck on land, and to Sir Arthur Wellesley was given the sole command of the war. On arriving in Portugal, he took the field with a force of about 25,000 men, and immediately proceeded about 2000 men, and mineratory potential to drive Soult from Oporto. The French being upon the opposite side of the Douro, a rapid river, at this point nearly 300 yards across, Wellesley, by a series of manœuvres as bold as they were skilful, threw his men across the river, took up a position in a convent upon the opposite shore, met and repulsed a fierce attack by Soult, then routed him, and drove him in panic-stricken retreat through the mountains into Galicia. In that disastrous march the French marshal lost a fourth of his army, the whole of his artillery, and the greater part of his baggage. Such was the first of that grand series of brilliant victories by which the Peninsular war was marked. Sir Arthur now entered Spain, formed a junction with Cuesta, the Spanish general, and fought and won the battle of Talavera, with 22,000 Englishmen against 50,000 Frenchmen. For this victory, in which he had received no assistance from the miserable, impracticable Spanish general Cuesta, he was ereated Baron Douro of Wellesley, and Viscount Wellington of Talavera. But, not being able to count upon the assistance of his Spanish allies, and with four French armies bearing down upon him from all sides, he resolved to withdraw into Portugal, where, soon afterwards, he constructed the famous lines of Torres Vedras, by which he kept Lisbon in security, and dashed back the impetuous onslaught of the French with complete success. These sta pendous lines of defence were double, the outer line being 29 miles long, and the inner one 24; the whole forming a series of fortified positions, extending from the ocean at Vedras to the back of Lisbon. Massena entered Portugal with 70,000 men; but finding, to his astonishment, the

capital defended in such a remarkable manner, he, after a few slight attacks, which were promptly repulsed, commenced a sullen retreat. Lord Wellington sallied forth from his lines. Loru weinington sailed forth from his lines, and went in close pursuit. At Almeida Massena made a stand, but was beaten in the most rapid and skilful manner by his opponent. Having thus cleared Portugal of the French, Lord Wollington resolved to again enter Spain; but as it was of the most yital importance that Badajoz and Ciudad Rodrigo, fortresses of immense strength, and garrisoned by Frenchnien, should not remain in the hands of an enemy, the English commander determined that they and disappointment Sir Arthur Wellesley re-should fall. And fall they did; yet not till he signed his command and returned to England, had met, and, after a hard-fought battle, de-where he found the nation judigmant at the [facted Alassena, as Panets ed 'Onerg-—not till he had made two unsuccessful assaults upon ne nad made two unsuccessful assaults upon Ibadajoz,—not, finally, till he had won the stronghold, at the cost of upwards of 1000 brave English soldiers dead, and more than 3800 wounded. "When," says Napler, "the extent of the night's havoe was made known to Lord Wellington, the firances of his nature gave way for a moment, and the pride of con-quest yielded to a passionate burst of grief for the loss of his gallant soldiers." But the san-guinary work was not ended. Marmont, who had been sent to supersede Massena, was alternately advancing and retreating. Long anxious to attack him, Wellington at length took advantage of a strategic blunder committed by his adversary, and fell upon him. The battle of Salamanca was the result, and was the most of Salamanica was the result, and was the most decisive victory the English commander had yet won in Spain. A month later he entered Madrid in triumph, and afterwards received from his sovergum the title of marquis. With several powerful French armies in the field, ton, having failed to take Burgos, retreated to his old quarters within the frontiers of Portugal, and there spent the winter of 1812, that winter during which Napoleon had lost 350,000 men beneath Russian snows. The campaign of 1813 opened auspiciously. The emperor, owing to his disasters in Russia, had been compelled to recall Soult from Spain, together with 20,000 men. There were thus left to oppose Wellington about 70,000 men; but there were about 100,000 more in different parts of Spain, under Suchet and other commanders. The French emperor could no longer spare large bodies of troops to pour through the Pyreness. Wellington was aware of this, and prepared to enter upon his decisive campaign. Rapidly marching into Spain, he, by the most skilful manœuvring, caused the French to quit Ma-drid and Toledo, and to fail back upon Burgos, and afterwards upon the Ebro, the passage of which they prepared to defend against the English; but Wellington, anxious to spare his men, made a détour, and passed the river at a higher point. Upon this, the French again retreated, pursued by their adversaries. At Vit-toria, the English came up with them. The French, under King Joseph and Marshal Jour-dan, accepted battle, and were decisively routed, losing a vast amount of arms and ammunition. On hearing of this battle, Napoleon was com-pletely dismayed, and hastily sent Soult to turn the tide of events in the Peninsula. Soult made a desperate effort to drive back the English and their Spanish and Portuguese allies; but after a series of sanguinary conflicts, k

as the battles of the Pyrenees, he was forced to retreat that French territory. In November, 1813, Wallington descended into France, but the present that French territory. In 1814, These desperate neonemers were maintained after an absence of five years, the great commander, now the duke of Wellington, lauded in which time, the French having succeeded in England, where his reception was unprecediatedly brilliant. powers sitting at Vienna immediately drew up a paper, in which Bonaparte was denounced as a disturber of the peace of the world. He was a disturber of the peace of the world. He was proclaimed an outlaw, and delivered over to public justice. The duke of Wellington was, at the same time, nominated commander-in-chief of the army to be concentrated in the Netherlands. In the month of April, 1815, Wellington was at Brussels, preparing for the impend-ing contest. It had been arranged that the allied troops should be mustered on the Rhine, and it was in order to cover this general gathering, and also to protect Belgium, that Wellington decided upon fixing his head-quarters of Procedure. ters at Brussels. Napoleon's object, on the other hand, was to crush the English army, and to drive back whatever Prussian troops might have entered Flanders, before the great concentration of the allies could take place. Wellington had under him about 40,000 British and Hanoverians, and 36,000 Germans and The Prussims, amounting to 80,000, Belgians. were at Namur, under Marshal Blueher. By indefatigable exertions, Napoleon had collected a force of 120,000 men. On the 16th of June the French under Napoleon attacked Blu her at Ligny, and penetrated to the centre of his position; but the Prussians fought with great obstinacy until nightfall, when Elucher retired in the lest order to Wavre. On the same day Marshal Ney attacked Wellington at Quatre Bras, but failed in all his attempts to carry the position. In consequence of Blucher's retro-grade movement upon the Wavre, Wellington grade movement upon the warre, weimigton retired to a position facing the village of Waterloo, crossing the high roads from Brussels to Charleroi and Nivelles. In front, he held the house and gradens of Hongoment, on his loft centre, he held the farm of La Haye Sainte. Napoleon concentrated his forces upon a range of heights looking upon this position, and, having despatched his third corps to observe the Prussians, he, about one o'clock on the 18th of June, commenced the fight with an impetuous attack upon the post at Hougou-This attack was renewed again and again throughout the whole of the day; but again throughout the whole of the tay; but the post was gallantly kept against every on-slaught by the Guards, and remained it, their hands. Simultaneously, Napoleon sent against ten British position heavy columns of infantry, following lines:-

Nanoleon's tactics were to pour against the whole British line a furious cannonade, and to launch against it heavy charges of infantry and But in all these attacks he could cavalry. But in all these attacks he could make no impression upon the British infantry. These desperate encounters were maintained until about seven o'clock in the evening, at which time, the French having succeeded in which time, the French Having Succeeded in carrying the post of La Haye Sainte from the Hanoveriaus, and the Prussian guns being heard on his right, Napoleon resolved to make a last desperate effort to overpower the British left centre, and ordered his Guard to advance. The brave Guard came forward in column, and halting at the distance of 50 yards from the English, attempted, under a murderous fire, to deploy; but, in the effort, they became broken into confused masses, the British muskery creating terrible have among them. They wavered, and then recoiled in hopeless confusion. At this moment the duke of Wellington moved forward his whole line, and, sweeping all before him, drove the French from their position, and cantured their entire artillery and baggage. The Prussians having arrived just as the French had been routed, the duke of Wellington halted his invincible troops in the field, and allowed Blucher to take up the pursuit of the panie-stricken French. With the victory of Waterloo the great continental war came to a termination, having lasted during twelve years. On his return to England, the duke of Wellington was received with all the honours that a grateful and enthusiastic nation could devise. In addition to the sums he had already received-about half a million-a grant of £200,000 was voted for the nurchase of the mansion and estate of Strathfieldsaye, in Hampshire. With the year 1822 the duke entered upon his life as a statesman, Of this portion of his career, honesty and sagacity were the main characteristics; and if he at first opposed innovation and change, it was from a fear that the constitution might be endangered by the efforts of mere theorists, with whom throughout his life he had no sympathy. He was twice secretary of state, and once prime minister; and to the last hour of his life may be said to have laboured for his country. That England was not unmindful of the merits of her greatest military commander is attested by the honours and rewards which she heaned upon him; and at his death his remains were interred, with every public honour, by the sid-of his illustrious fellow-hero, Nelson, in St. Paul's cathedral, in either at Dangan Castle, Meath, or at Dublin, 1769; p. at Walmer Castle, Kent, 1852.

An association thus rigidly occu-pied with religious duties excited considerable notice; and, among other names bestowed upon the members, that of Methodists was applied to them with such success, as to subsequently become the distinctive appellation of all their followers. Deeming Oxford a sphere not large enough for his labours, Wesley, with some others, went to Georgia, in North America, in 1735, with a view of converting the Indians. After a stay there of nearly two years, he returned to England, commenced preaching to open-air meetings, and gathered many followers. The churches and gathered many followers. For many years he practised, though but with moderate success, at the common law bar, and then betook himself to the court of chancery. In 1818 Mr. Wetherell obtained a seat in Parliament as member for Shaftesbury; and though he displayed much talent and energy in debate, "his slovenly talent and energy in counce, his soveriny attire, uncouch gestures, patchwork phrase-ology, fanciful illustrations, odd theories, re-condite allusions, and old-fashioned jokes, tempted men to call him a buffoon when they ought to have admired his ingenuity, reverenced his learning, and honoured his consistency." From 1820 to 1826 Sir Charles represented the city of Oxford; subsequently he sat for Plympton; and in 1830 was elected for Boroughbridge, which was disfranchised by the reform In 1824 he was appointed solicitor-general, and received the honour of knighthood. years afterwards he succeeded Sir John Copley as attorney-general, but resigned when Mr. Canning became premier. He came into office once more in 1828, under the duke of Wellington, but remained only 15 months, being deter-minedly opposed to Catholic emancipation. He was an inveterate opponent of reform, and on the borough he represented being disfranchised, closed his senatorial life exclaiming. "This is the last dying speech and confession of the member for Boroughbridge." Sir Charles held the office of recorder of Bristol; on and his great unpopularity, as the marked opponent of the reform bill, rendered him so obnoxious in that city, that when he appeared by the state of the state

there to hold the Michaelmas sessions for 1831, his carriage was surrounded by an infuriated mob, who hooted at and pelted him with stones; and serious riots and burnings took place on the following day and night. Sir Charles, however, escaped uninjured, and ful-

WHEATSTONE, Charles, wheet'-stone, an emi-nent English natural philosopher, who introduced and gave a practical application to the electric telegraph in England, and claimed the merit of having invented the stereoscope. He was brought up to, and for a time followed, the business of a manufacturer of musical instruments. Pos-essed of great mechanical ingenuity, and having a strong pre-dilection for philosophical research, he at an early age made some important experiments on sound, the results of which were published in the "Annals of Philosophy" for 1823. He next occupied himself with investigations relative to he philosophy of light, of optics, and of electri-ity. In all these departments of philosophical inquiry he met with the most brilliant success; his experiments, apparatus, and discoveries being of the most ingenious and valuable character. His reputation was soon established, and in 1834 he obtained the post of professor of experimental philosophy in King's College, ondon. In 1836 he was chosen a fellow of the toyal Society, to which body he, in 1838, made known the beautiful invention of the stereo-scope, in a paper entitled "Contributions to the Physiology of Vision." But the application of

own of using lectricity as a means of affording telegraphic ommunication between distant places had been a favourite one with natural philosophers for more than half a century. It is asserted that in 1834 Professor Muncke, of Heidelberg, taking idvantage of what had been previously done by ther electricians, produced and described an lectric telegraph. In 1836 he is said to have explained the whole thing" to Mr. Cooke, then ngaged in the Anatomical Museum at Heidelerg in preparing wax models for the university f Durham. This gentleman at once perceived he importance of the discovery, and early in 837, having nearly completed a system of appaatus for an experiment on the line of the Manhester and Liverpool Railway, he was introneed to Professor Wheatstone, who was ennged upon the same subject, and had made one important discoveries in connexion thereith. These gentlemen at once entered into an th. These gentlemen at once entered into an liance, and together they perfected and applied a clearite telegraph. There are no less than ar claimants for the honour of having innered the clearite telegraph as a practical asity—Wheatstone, Alexander, Steinhill, and 'orse; but Wheatstone is admitted to have

others. With respect to the relative claims of Professor Wheatstone and Mr. Cooke, an eminent authority, Professor Daniell, may be quoted. He says: "Whilst Mr. Cooke is entitled to stand alone as the gentleman to whom this country is indebted for having practically introduced and carried out the electric telegraph as a useful undertaking, promising to be a work of national importance, and Professor Wheatstone is ac-knowledged as the scientific man whose profound and successful researches had already prepared the public to receive it as a project capable of practical application, it is to the united labours of two gentlemen so well quali-fied for mutual assistance that we must attribute the rapid progress which this important but the rapid progress which this important invention has made during the few years since they have been associated. To the "Proceed-ings" of the Royal Society, and to the "Philo-sophical Transactions," Professor Wheatstone contributed a number of papers, upon Optics, Electricity, and also upon various improvements in connexion with the electric telegraph. At the Paris Universal Exhibition of 1855 he was one of the jurors in the section for heat, light, and electricity. With Professor Daniell, and other eminent scientific men, he formed one of the commission which made the selection of magnesian limestone for building the New Palace of Westminster. For a detailed account of Professor Wheatstone's labours, the student is referred to a paper in vol. xi. of the "Proceedings" of the Institution of Civil Engineers. ceedings" of the Institution of Civil Engineers, entitled "The Electric Telegraph; its History, Theory, and Practical Application." WHITERIAD, George, white feeld, one of the founders of Methodism, was the son of an innkeeper, and received his education in the grammar-school of St. Mary-de-Crypt at Gloudism. cester, and afterwards became servitor in Pembroke College, Oxford. In 1736 he was ordained by Dr. Benson, bishop of Gloncester; after which his zeal prompted him to preach in pri-sons, private houses, the fields, and open streets. A course so strange and irregular gave offence to his ecclesiastical superiors, and the doors of the churches were everywhere shut against him. His eloquence was particularly fervid, and well adapted to make a great impression upon ordinary minds; in consequence of which he obtained many followers. In 1738 he went to Georgia, in America, whither he had been invited by John Wesley, where he was well received; and wonderful effects are recorded in his journals of the power of his preaching. Sudden and violent conversions were considered as indispensably necessary to prove that the hearers had obtained divine grace. some time he acted in conjunction with the two Wesleys, but at last serious differences arose between them respecting the Calvinistic doctrines of absolute election and final perse-verance. These were zealously maintained by verance. These were zealously maintained by Whitefield and his followers, and as stremuously denied by the others. WILBERFORCE, William, will-ber-forse, a distinguished English philanthropist, who was the son of a merchant of Hull, and exhibited from his carliest years great quickness and power of intellect. In his 14th year he is stated to have written a letter to a Vork newspaper, in which he denounced "the odious traffic in human fish." In 1772 he entered St. John's Collece. In 1778 he entered St. John's College, Cambridge; but having become the possessor of a large fortune, after the demise of his uncle and grandfather, and having a strong predilec-tion for social gatherings, he led a by no means studious life at the university: but his great natural ability enabled him to acquire a sound knowledge of the classics. Having formed the resolution to enter upon public life, he repaired to London, where he was admitted into the most fashionable society. Returned to Parlia-ment as member for Hull, he joined the oppo-sition to Lord North's ministry, and, in debate, condemned the American war. With Pitt, who condemned the American war. With Pitt, who had been his friend at Cambridge, he lived upon the most amicable terms; and when Pitt was nominated premier in 1783, Wilberforce, on several occasions, gave him very material assis-tance, but refused all offers of personal advance-In his 28th year he resolved to devote himself to that cause which, even as a schoolboy, had been a subject of his thoughts,—the abolition of negro slavery. During twenty years he continued to solicit the emancipation of the negro, by speeches in Parliament; by seeking the co-operation of the clergy of every denomination; by his own pen and purse, and those of his friends; by negotiating with foreign powers, and by concillating the support of every public man or minister in his native country. Continually being disappointed, he was ever ready to proceed with new vigour, until, after pursuing this philanthropic labours with a persistency made energy truly marvellous, he saw the hour of his success at hand. In 1807 the abolition bill passed the Lords, and its after progress through the Commons was one uninterrupted ovation to its projector. Si Samuel Romlily, as supported by Dr. Mead. WILKIE Sir David, wil'-ke, a celebrated Scotch painter, who so early evinced his predilection for pictorial art, that he could draw before he could spell. In his 14th year he became a pupil at the Trustees' Academy at Edinburgh, where, says Sir William Allan, one of his fellow-students, "his advancement was marvellous, and he soon took up that position in art which he maintained to the last. He was always on the look-out for character; he frequented trysts, fairs, and market-places." About his 20th year he repaired to London, where, in 1806, he painted and exhibited his "Village Politicians," which was purchased by the earl of Mansfield for 30 guineas. The great success of this work, which was executed in a style quite unusual with the artists of that period, quickly brought Wilkie into notice, and he found patrons in abundance. Among other fine works which he painted about this time were, "The Rent Day," "The Cut Finger," and "The Village Festival." In 1809 he became associate, and in 1811 member of the Royal Academy. In 1814 he went to Paris, in order to study the works of art which Napoleon had brought together during his occupation of different continental cities. Up to the year 1822 he continued to produce masterpieces of art in the style in which "The Village Poli-ticians" had been painted. At this latter date he executed his finest work, "The Chelsen Pensioners," which was commissioned of him by the Duke of Wellington for 1200 guineas. After this picture, he changed his style, and

adopted one in which he was less successful. He changed his subjects also, and now painted

"FORTRIE Of the Aling in a scotch Dress." Having suffered in his health, he spent three years upon the continent, and aften his return to England, was in 1830 nominated values to the king. For the presidentship of the Royal Academy he likewise became a middlate; but obtained only one vote. In 1866 he received the honour of knighthood from William IV. In 1672 Louis XIV. invaded Holland; the French had also been intriguing with Charles II., with the Elector of Cologne, and the Bishop of Munster. Accordingly, war was declared against the United Provinces by all these rulers; and, the Dutch having suffered a series of and, the Dutch having suhered a series or reverses both upon sea and land, a general dis-content prevailed in the Republic. The par-tisans of the House of Orange excited the hatred of the people against the De Witts, as the authors of their misfortunes. An attempt was made to assassinate John de Witt, but failed: Cornelius was arrested upon a false charge of conspiring to poison the Prince of Orange, was submitted to the torture, and sentenced to be banished. John prepared to accompany his brother into exile; but, as they were leaving the Hague, the savage populace murdered the patriots in the most brutal manner. Thus fell these virtuous brothers, one of whom had served his country as chief magistrate during twenty years, whilst the other had, by his sound sense and probity, given efficient support to every measure which might contribute to the welfare of his countrymen. WOLFE, James, a celebrated English military commander, who entered the army at an early age, and, possessing great military talents, improved by assiduity and experience, soon dis-tinguished himself as a brave and skilful

officer. He was present at the battle of Lafeldt, and in every subsequent engagement in Germany in the war which terminated with the peace of Aix-la-Chapelle, in 1748. Appointed colonel of the 67th regiment in 1758, he brought it to such a pitch of exact discipline, that as long as the determined bravery of the six battalions on the plain of Minden is recorded in history, the stand of that regiment will be remembered to his honour. He was greatly instrumental in the taking of Louis-burg, and had scarcely returned thence when he was appointed by Pitt to the chief command of the important expedition against Quebec, in 1759. This undertaking afforded ample scope for the exercise of his great military talents. By his excellent strategic dispositions he gained a position upon the hills which command Quebec. Montcalm, his brave adversary, con-tested the possession of the city with great skill and determination; but, after an obstinate

fight, the French were compelled to give way. But the accomplished English general was

mortally wounded in the moment of victory; on the news of which he lifted up his eyes to

heaven, and said, "I thank God; I die con-tented." B. in Kent, 1726; killed, 1759.

In 1374 the pope having cited King Edward III. to Avignon for refusing to pay him a yearly tri-bute, Wycliffe was appointed a member of the legation sent to the conferences held thereupon at Bruges. About this time he was preferred by the king to the rectory of Lutterworth, in Leicestershire. Having now openly preached against the corruptions of the Roman church, Pope Gregory XI., being informed of his con-duct, issued several bulls against him, charging duci, issued several buils agains nm, charging inhim with numerous heresics. An assembly was accordingly held at St. Paul's by Courtney, bishop of London, to examine Wyellin, who appeared, supported by John of Gant, duke of Lameaster, and Lord Henry Percy. Wyellife made an able defence of himself, and the council ended without any determination. It would appear that, still continuing to denounce papal corruption, he was in 1378 summoned before a synod held in the archibishor's palace at Lau-beth; but his safety was severed by a message from the king's mother, ordering the proceed-ings to terminate. It is remarkable that, although Wycliffe continued his vehement attacks though Wyeilite continuou are varieties. Young, Brigham, the president and prophet of the Mormons, of whose early life nothing that is authentic has been published. At the time of the murder of Joseph Smith, whose friend and colleague he was, Young was chosen by the Mormons as "prophet and revelator." He soon proved himself equal to the position. ing the utter hopelessuess of contending against the people of Illinois, backed, perhaps, by the government of the United States, he besought his followers to quit Nauvoo, and proceed far beyond the most outlying settlement of the federal government. Resolved to place an almost impassable barrier between the "saints" and their persecutors, he selected a vast sterile tract beyond the Rocky Mountains, called the Valley of the Great Salt Lake. Accordingly,

country for the settlement of their brethren. This small band underwent the greatest sufferings; but they nevertheless eventually succeeded ings; out her preventions eventually successful to planting crops, and in otherwise making the territory habitable. The great body of the "Mormonites" then followed. Brigham Young was nominated governor, with the whole civil and ecclesiastical authority vested in him. ecclesistical actionary vesset in limit. Feeling that, in order to firmly establish the theoretic system his predecessor had in view (see SMITH, Joseph), Young, after organizing his plans for the settlement of the community, endeavoured, as much as possible, to keep out "Gentile" intruders; but the discovery of the gold-fields in California caused such a vast stream of emigrants to pass Utah, on their way to or from the auriferous region, that the saints" were compelled to open an intercourse with the travellers This traffic, which was at the outset a source of the greatest vexation and uneasiness to the leaders of the Mormon community, ultim ately led to the greatly-increased prosperity of the settlement. Under the presi-dency of Buchanan, troops were dispatched to Utah, to enforce the authority of the federal officers placed there; but the affair was subsequently compromised, by Young and his followers professing their loyalty to the United States government. Mormonism, after the advent of Brigham Young's supremacy, became materially altered from what it was in the time of Joseph Smith. It would appear that the "prophet' claimed the power of granting or with-holding eternal-life; that he strictly enjoined blind obedience to the dictates of himself and his "elders;" that, finally, the constant theme of his exhortations was. " Do your duty, and leave us to do ours; cleave to the truth, and let the brethren come and pay their labour tithings."

the first active agent in the revolution which resulted in the establishment of the independence of Greece, was son of Demetrius, Hospodar of Wallachia. About 1805, Ypsilanti's father received a summons from the grand seignior to repair to Constantinople, and fearing that obedience to the command might cost him his life, he retired to Russia. The son entered the Russian army; and was a captain of hussars when a ball, at the battle of Dresden, carried away his right hand. He ultimately attained the rank of major-general, and was made aide-de-camp to the emperor. In 1820 he became connected with the Hetaireia, of which association he eventually became the leader. When the breaking out of the insurrection in Greece became inevitable, he resolved to plant in Moldavia the standard of revolt. He crossed the Pruth with a few attendants, and in March, 1821, issued a proclamation, aunouncing that Greece had kindled the torch of freedom, and thrown off 1112

ZENO of Elca, ze'-no, a Greek philosopher, and a follower of the Eleatic sect, studied under Parmenides, and accompanied that philosopher to Athens about 454 B.C. According to Aristotle, he was the first who employed dialectics. An ardent patriot, he endeavoured to deliver his country from the sway of a tyrant; but the conspiracy in which he was engaged having been discovered, he was put to death in a barbarous manner. He was the author of several philosophical works, none of which have survived. Aristotle has, however, preserved the arguments which Zeno held against the existence of absolute motion. Flourished in the 5th

century B.C. ZENO of Citium, the founder of the sect of Stoics, so called from his opening a school in the painted colonnade (Stoa) at Athens, where he

taught the property of the property of the toric. The toric that to live according to nature should be the aim of man; that the really snound be the aim of man; that the feathy wise man, having everything in himself, is beyond the power of those things which enslave the rest of mankind. The Stoic might feel pain, but could not be conquered by it. Unlike the Epicurcans, the Stoics sought wisdom and temperance; and differed from the Scepties, inasmuch as they were always seeking for the truth, which had been denied by the former. His successors carried his philosophy to Rome, where it was embraced by the most illustrious persons. Zeno taught at Athens for upwards of

They settled first in Upper Lusatia, in 1722; and becoming considerable, formed a village called Herrnhut, in 1732; but were subsequently driven from it. A few years afterwards the count repaired to England, and there established a Moravian congregation. He afterwards founded congregations of the sect in Switzerland and the British colonies of North Switzeriand and the British colonies of North America. He succeeded in obtaining permis-sion from the Saxon government for the return of the United Brethren to Hernhut, about 1747. The government of the United Brethren is episcopal, their doctrine sound, and their manners irreproachable; but what renders them particularly deserving of respect is, the pains which they have successfully taken for the propagation of the gospel in heathen countries. Count Zinzendorf was succeeded in the government of the Brethren by Count Dohna. B. in

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

WARD, LOCK, & TYLER.

FOR FAMILY READING AND REFERENCE.

ONE HUNDRED AND SIXTY-SIXTH THOUSAND.

Now Ready, New Edition, post 8vo, half-bound, price 7s. 6d.; half-calf, zos. 6d. BEETON'S (Mrs.) BOOK OF HOUSEHOLD MANAGEMENT, comprising every kind of Practical Information on Domestic Economy and Modern Cookery, with numerous Woodcuts and Coloured Illustrations.

"Mrs. Isabella Becton's 'Book of Household Management' aims at being a compendium of household duties in every grade of household life, from the mistress to the maid-of-all-work. It is illustrated by numerous diagrams, exhibiting the various articles of food in their original state, and there are also coloured plates to show how they ought to look when dished and ready for the table. The verdict of a practical cook of great experience, on returning the book to her mistress, was, 'Ma'am, I consider it an excellent work; it is full of useful information about everything, which is quite delightful; and I should say any one might learn to cook from it who never tried before."—The Albenaum.

Demy 8vo, half-roan, price 15s.; half calf, 18s. 6d. With Maps and Illustrations.

BEETON'S DICTIONARY OF UNIVERSAL INFORMATION, A to Z, comprising Geography, Biography, History, Mythology, Biblical Knowledge, Chronology, with the Pronunciation of every Proper Name.

"The 'Dictionary of Universal Information,' just published by Mr. S. O. Beeton, supplies a desideratum much and widely felt—that of a comprehensive yet portable dictionary of proper names. The 'Encyclopædia Britannica,' the 'English Encyclopædia,' and the other great digests of human knowledge, in consequence of their high price, are accessible only to a few. In such works no special provision is made for supplying short and comprehensive information regarding individual words, arranged in their alphabetical order, of the kind most likely to be required by the great'mass of general readers. Mr. Becton to some extent enters a new field in devoting a Dictionary exclusively to proper names in Geography, History, Biography, Mythology, Bible Knowledge and Chronology. In these pages condensation has been in every way sought after, and we know of no work which supplies more information at a smaller cost."—The Times.

Published by Ward, Lock, and Tyler.

- *,* This very valuable Standard Commentary, now published without the slightest abridgement, is rendered by the addition of Supplementary Notes from recent sources a most desirable Modern Copyright Edition.
- ** MATTHEW HENRY'S COMMENTARY recommends itself to all classes of the community. While it presents no paradoxes to baffle the unlettered, the learned cannot afford to slight its deep wisdom. It is a Work which must be an acquisition alike to Clergymen and Ministers of every Protestant Denomination—to Heads of Families—to the Readers in Mechanics' Institutes and Artizan's Libraries—to Principals of Schools—and to all Bible Students of every rank and grade.
